Thank you

A big thanks to:

My family, and especially my wife for her endless support!

Levi for his matchless enthusiasm and interest in dinosaurs.

Countless people who stepped in to edit and give feedback and share research. Can't name them all so I won't but you know who you are.

And Special thanks to all those who have been teaching creation, studying and researching for decades. Many who have dedicated their entire lives. You know who you are. You are my inspiration!

My mother who has an unquenchable desire for principles of freedom and truth. She is the one who first turned me onto these ideas a few short years ago!

Testimonials

"Jeremy's book is a fascinating journey into a world where science and scripture meet in the most unexpected of places—among dragons and dinosaurs. With incredible depth and a clear passion for truth, the author uncovers compelling evidence... This book isn't just a theory—it's a thoroughly researched and eye-opening invitation to look again at what we thought we knew." ~ Brenda High

"More people need to see this book and learn the truth. Once you can see all the evidence and how things connect, it starts to make sense. The pictures draw you in and the stories told challenges what we've been taught for so long. Jeremy did a great job taking information from many different sources and compiling it into one place." ~ Adam Salisbury

"Jeremy puts faith first in his worldview, and demonstrates as plain as word can tell, many of the signs that follow faith. Not only is his work intellectually stimulating but it is fun and easy to use filled with pictures and bite-sized evidence. Jeremy's faith is anchored in the Lord Jesus Christ, and his work defends that faith in a capacity highly neglected in today's secular culture - the battle for truth about creation and the history of the world. Very few are standing up in this fight and Jeremy bravely takes on the need." ~ *R. Nathan Richardson*

"What a fascinating book for those who seek to know the truth in scriptures! Jeremy has done a fantastic job bringing the evidence and these stories together in one easy-to-read book. I look forward to sharing this with my friends and family."
~ *Russell H. Barlow*

"It helps you understand that dinosaurs were real and comprehend why this is important to all of us. This at the core of all of our lives whether we believe in God or not. Dinosaurs are real and both religion and science come together in this book testifying of this fact. Jeremy's passion on this topic is evident throughout this book and his desire to learn and share his experiences takes you to places you have never been. I also love the subtitle of this book: Where Faith and Science Meet."
~ *Dean W. Sessions*

I've been on a journey with my family to learn how dinosaurs fit into the Holy Scriptures.
Do Science and Religion work together or oppose?

➤ **THIS IS NOT JUST ABOUT DINOSAURS.**

➤ **THIS HAS DOCTRINAL AND SPIRITUAL IMPLICATIONS AFFECTING OUR DIVINE IDENTITY.**

Our children are being taught they evolved from apes. Is this accurate? Or should we trust the accuracy of the scriptural accounts that tell us God created all animals and caused them to reproduce in their sphere and element? Is it also accurate that we were created in the image of God?

I testify that God created us in his image along with every animal and every creature. I also firmly believe that he created the dinosaurs and that they lived with Adam and Eve. This shows us dinosaurs were not millions of years old, and we did not evolve from apes or a common ancestor.

I see great importance in understanding all truth as God intends it. While dinosaurs might seem like a topic for children, it is only a sign on the door directing you into a room filled with spiritual knowledge of the creation, our divine identity, and the world around us testifying of our creator and Jesus Christ.

Faith is declining in the world and I worry it is because we are becoming blind to the love that is around us in creation. Not only is the idea of dinosaurs living with man exciting to all people, it also teaches eternal truths. My intention is to lay out the information as a broad concept for you to dig deeper as you choose. I brush over topics such as archaeology, history, biology, translation, doctrinal interpretation and more. Like putting together an image from a dot-to-dot, I hope you will come to see the scriptures are literal and accurate and good science is beautiful and exciting. Most importantly, I hope to increase understanding of the divinity of man. Later in life it has been refreshing to discover a love of science as it coincides with truth and a deeper hunger for the scriptures like never before. It is truly an awakening. (see Jacob 3:11)

Please be patient as I lay out the information in this book:
If it seems a little all over the place, it is because we have a lot of interrelated information; there is a flood of evidence the world over (pun intended) and putting it in a single book is challenging. Each item works with the next and the ideas are interconnected so keeping the ideas in chapters sometimes merge and mesh. I could blame it on ADHD but that is more of a gift I suppose. Creativity and the inspiration of God combined make an interesting combination. My passion and feelings outrun my patience and organization skills. There is so much information to compile it is difficult to get it all in one place. We hope this will be a starting point for your own research. so I've added links to videos, documents, books, and websites. Please dig in with your heart and curiosity.

I Hope this book is simple for all to understand. As Nephi said "I glory in plainness" It is not to be a science textbook but basic ideas with evidence. I do not fear the critique of men, for *"God hath chosen the foolish things of the world to confound the wise: and God hath chosen the weak things of the world to confound the things which are mighty"* 1 Cor 1:27.

I find solace in the words of enoch who said I *"am but a lad and all the people hate me; for I am slow of speech;"*

I hope that you will not mock before first examining the data. "Lord, the Gentiles will mock at these things, because of our weakness in writing; for lord thou hast made us mighty in word by faith, but thou hast not made us mighty in writing" Ether 12:23

I feel like Jared who had awkward hands. *"And thou hast made us that we could write but little, because of the awkwardness of our hands."* Ether 12:24 This truly describes me as I would prefer speaking about this in person but a book is a good way to lay it all out.

While I am not at the level of these great men, I am endowed with the power of the Holy Ghost and have the same divinity within myself. You also have this power as did prophets of old. My credentials do not say PHD, MD or any of these. Education comes in many forms but I have heard it said *"how could someone believe a lie that dumb? They must have spent a lot of years in college."*

There is an argument to be made that universities can at times be places of indoctrination rather than places of learning. This is specific to teachings of evolution. I support education of all forms when based in eternal truths. However, sometimes when we send our kids off to college, we lose them. There is no doubt satan uses every tool he can in every arena, thus we have a need to stay vigilant.

"I, GOD, CREATED THE HEAVENS AND THE EARTH"

God used matter unorganized to create the stars and planets in the heavens. He moved upon the face of the waters to create our water-filled planet. (see Gen 1:2, Moses 2:2)

Water forms a perfect sphere in space and water gives life to all things. I believe our planet is a water planet. An earth shattering theory backed by scripture and science. In a later chapter we will show the science for this that substantiates the scriptures. (Credit: UniversalModel.com)

The doctrine of the creation is vital to our foundational understanding of the Gospel. The creation is the beginning of several vital doctrines. First the creation subsequent to the fall and the atonement of Jesus Christ was required after the fall. These doctrines are eternally intertwined in our own identity.

If God created us in His image and created all the animals, as stated in scriptures, then we did not evolve by random chance and the scriptures are literal and accurate. This shows that accurate scripture records HOLD THE KEY to SALVATION through his son Jesus Christ!

The earth did not form by random chance.
"The plan required the Creation, and that in turn required both the Fall and the Atonement. These are the three components of the plan." (Russell M Nelson April 2000)

Man made in the image of God is a fundamental doctrine of Christianity and life. When Ammon taught King Lamoni, he opened the scriptures and began at the creation (see Alma 18:36). Aaron also began teaching King Lamoni's father with the account of the creation. This is not a mythical idea but a real event. The creation account is not a dream like the tree of life but a historical account. It is so important that the Church of Jesus Christ of Latter Day Saints sets itself apart from other christian religions with 4 accounts of the creation. Can you name where each one is found?

Lehi gloried in receiving the plates of brass because they "gave an account of the creation of the world, and also Adam and Eve who were our first parents."

President Gordon B. Hinckley declared "Our bodies are sacred. They were created in the image of God. They are marvelous, the crowning creation of Deity. No camera has ever matched the wonder of the human eye. No pump was ever built that could run so long and carry such heavy duty as the human heart. The ear and the brain constitute a miracle. … These, with others of our parts and organs, represent the divine, omnipotent genius of God" ("Be Ye Clean," Ensign, May 1996, 48).

Thomas S Monson *"He is real. He is living. We are his children made in his image. We look like him and he looks like us" ("I Know That My Redeemer Lives,"* Tambuli, Apr. 1988, 6; Ensign, Apr. 1990, 6).

The answer to the accounts of the creation is Genesis, Moses, Abraham, and in the temple endowment.

I testify that we did not evolve over millions of years by random chance and that God did NOT "use evolution" as some intellectuals state. The Lord has said "I am able to do mine own work." 2 Ne 27:20 Later we will show that science and scriptures don't support it. Modern prophets have spoken on the topic, don't be deceived thinking they have not spoken out. Let's hear what they say about the topic of creation and evolution.

We are made in the image of God.

This is so important that it is referenced at least 9 times in canonized scripture:

1 Cor 11:7 - "*... he is the image and glory of God*"

Abraham 4:26 - "*...let us go down and form man in our image*"

Moses 6:9 - "*...In the image of his own body, male and female, created he them, and blessed them*"

Moses 2:26 - "*...Let us make man in our image after our likeness*"

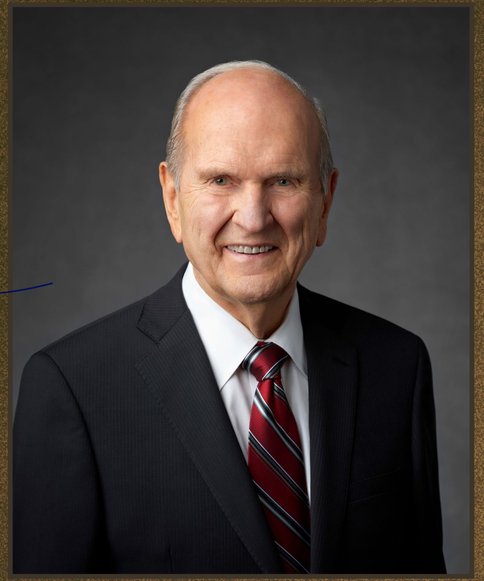

Alma 22:12 - "*...how God created man after his own image*"

Alma 18:34 - "*...in the beginning was created after the image of God*"

Mosiah 7:27 - "*...he said that man was created in the image of God*"

Ether 3:15 - "*...Yea, even all men were created in the beginning after mine own image*"

Gen 1:26 - "*...God said, Let us make man in our image, after our likeness*"

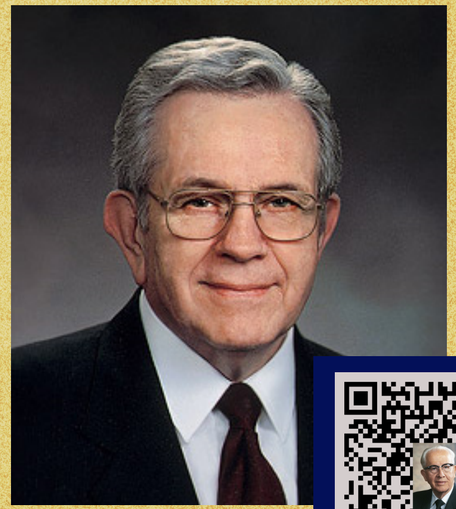

"Yet some people erroneously think that these marvelous physical attributes happened by chance or resulted from a big bang somewhere. Ask yourself, could an explosion in a printing shop produce a dictionary? The likelihood is most remote. But if so, it could never heal its own torn pages or reproduce its own newer editions!"

Russell M. Nelson, "Thanks Be to God", April 2012

MODERN PROPHETS SPEAK ON THE MATTER:

"Surely no one with reverence for God could believe that His children evolved from slime or from reptiles."

~ Boyd K Packer

Listen to many others proclaim the truth in this video

Adam and Eve were real people. They were our first parents (1 Nephi 5:11) and there were no "pre-adamites" or "subhuman" people before them. Eve was the mother of ALL living as specifically mentioned in Moses 4:26 and Gen 3:20.

Why would we know the location of the garden of eden or Adam-ondi-ahman if it was a mythical story or place. The worldly theories have given rise to intermediate belief systems that are false ideas mixed with truths. These are supplanting the full and complete gospel.

Evolution teaches death for millions of years before Adam and Eve. We know there was no death before the fall of the earth with our first two parents on it. God brings life, mercy and hope. Evolution is a doctrine of death, survival, and chaos. The second law of thermodynamics shows without intelligent help all things tend towards chaos. Science matches scripture. The church doctrine aligns with truth.

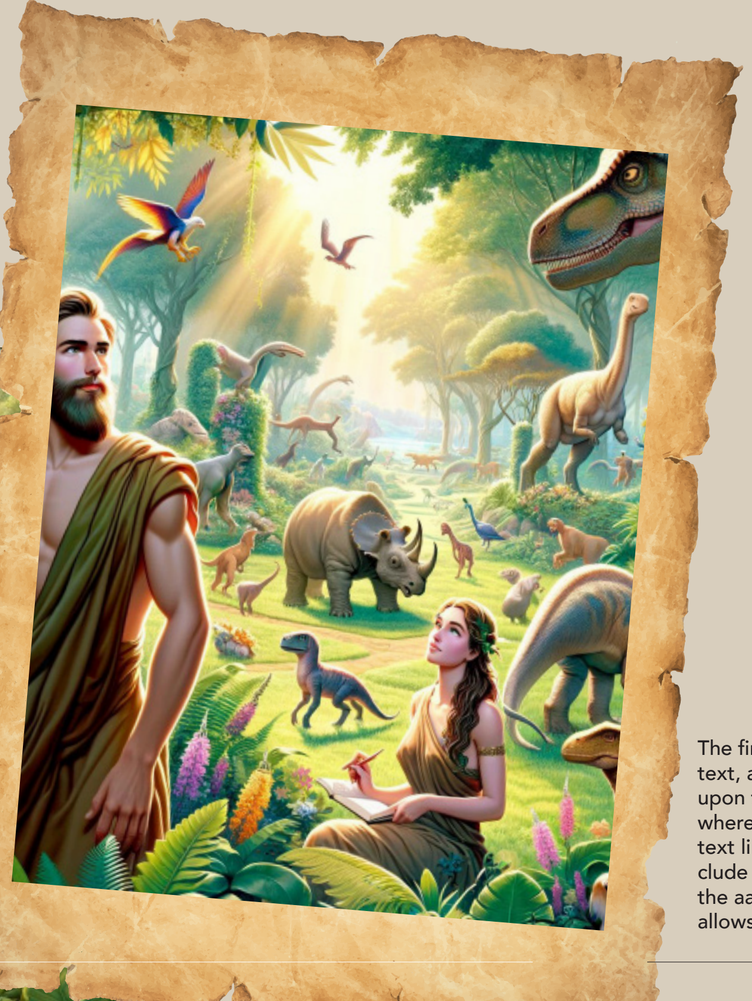

Jeffrey R Holland echoes this truth *"In our increasingly secular society, it is as uncommon as it is unfashionable to speak of Adam and Eve or the Garden of Eden or of a "fortunate fall" into mortality. Nevertheless, the simple truth is that we cannot fully comprehend the Atonement and Resurrection of Christ and we will not adequately appreciate the unique purpose of His birth or His death—in other words, there is no way to truly celebrate Christmas or Easter—without understanding that* **there was an actual Adam and Eve who fell from an actual Eden**, *with all the consequences that fall carried with it."* (*Where Justice, Love, and Mercy Meet*, April 2015 General Conference)

WERE THERE DINOSAURS IN THE GARDEN OF EDEN?

We say yes! Join us as we present the evidence we have found on this spiritual and scientific journey of discovery. When we look at historical records, archaeology, and scriptural accounts the data lines up.

GOD CREATED EVERY CREATURE

God's creations truly are breathtaking and beautiful! They fascinate, entertain and bring joy!

The first reason we believe dinosaurs lived with Adam and Eve is because they were never excluded from the creation text, all creatures that creep were included. "I, God, made the beasts of the earth..., and everything which creepeth upon the earth after his kind." If you don't like that argument, don't turn away just yet. On the next page, we show where they ARE mentioned specifically in scriptures. However, there are many animals that are not mentioned in the text like aardvark and alpaca. We know he created the birds specifically and the cattle and fish. God actually does include "everything which creepeth." This is an all inclusive text and leaves out no animal. Therefore we know he created the aardvark, and alpaca, ant, and amoeba. Science is discovering this now in complex DNA information, because DNA allows for change within kinds.

Dinosaurs might be mentioned in the first chapter of all scripture, Genesis Chapter 1.

When Daniel Burdett first sent me a message about an unpublished article written by Professor Jeffrey R. Chadwick, at BYU, a few years back my jaw dropped and my heart beat faster. His unpublished essay provides another perspective on the translation that might instead reference the large beasts of lore, dragons. This was exciting as I had found so many artifacts and historical references to dinosaurs but only a few in the scriptures. If dinosaurs were so massive and prominent would they be spoken of in the most read book on earth?

Daniel sent me the unpublished essays, and as I verified the translation I was ecstatic to see they matched. I then had to meet up with Jeffrey Chadwick. He looked to be retired possibly but I emailed and called and called. Finally he responded! Now I have full permission to share his research along with the full documents accessible from the QR code on the next page.

הַתַּנִּינִם הַגְּדֹלִים

e·thninm e·gdlim

As Jerusalem Center Professor of Archaeology and Near Eastern Studies, he dug into the Hebrew translation of genesis. He makes the claim that dinosaurs are written about in Gen 1:21, with these assumptions:

1) **Moses saw the creation of the earth in its entirety (Moses 1:8)**
2) **Dinosaurs were real animals that existed based on fossil evidence.**
3) **The translation for "great whales" is not correct.**

In the essay he describes how the Hebrew word could actually be referencing a large reptile. The Hebrew translation for "great whales" is ha-tanninim ha-gdelim. (see Hebrew characters in image 14.3-14.4) Ha meaning "the" in English and Tanninim meaning "crocodile" in modern Israeli Hebrew or "sea serpent" in the Jerusalem Bible and dragon by google translate today; a tool unavailable to Jeff in 1991. After some thought he describes gdlim/gedolim as "stretched-thing" or "stretched-one". With a full translation looking something like: "the large stretched ones" with large referencing dragons, crocodiles, or sea serpents.

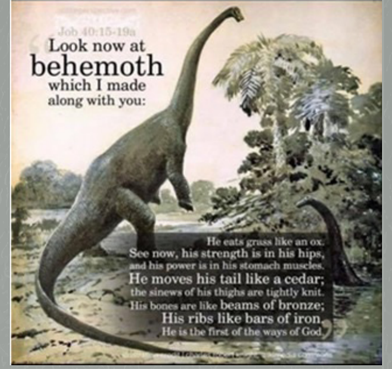

Professor Jeffrey R. Chadwick Article

Moses tries to describe to us what he saw, but through translation and time, errors crept in. It seems clear based on what it is not. Jeffrey references multiple resources that all agree it is not whales. This translation means more than you might think to the world at this time when God's creations are being used to deceive even the very elect away from the glory of God. He did create the dinosaurs. He created you and me. Look for yourself, study by looking at the original article in the **QR link** to the left.

גדולים	big
הַ תַּ נִּ ינִ	This is a dragon

DINOSAUR AND MAN

We hope to demonstrate that dinosaurs were nearly all wiped out by a universal flood. the dinosaurs after the flood were called dragons. Finally, the evidence for ape to human evolution is non-existent, revealing a failing pseudo-theory. Please come along on this journey for truth with us!

The word Behemoth, as referenced in the bible, is a term used in modern slang describing huge, massive things that are unmatched. What animal is this describing in the old testament? "Behold now Behemoth..." (Job 40:15-24 in the Bible.) **God tells Job to behold this animal. God does not tell Job to behold something he cannot see. This is an animal that existed along with Job and his description is detailed in the old testament. He also told him to behold 9 other real animals** Before chapter 40, God mentions 9 animals we could all recognize today: Lion, Donkey, Ox / Bull, Horse, Eagle, Hawk, Ostrich, Deer / Hind, and Raven. Based on the placement of the text with other known animals we know is not a symbolic term.

Does the translation show an elephant, the largest land animal alive today? I don't think an elephant has a large tail like a cedar tree. Let's compare this image to the right. The translation in Genesis shows scriptural reference to a large reptilian animal, possibly the greatest land animal of all time, similar to the Titanosaurus that had a total length of roughly 85 feet with a weight of nearly 65 tons, or 130,000 lbs! Wow! That is about 9 times larger than a male African elephant. God is great!

DESCRIPTION OF THE ANIMAL:

- ✓ **Strength in his loins and belly (large torso)**
- ✓ **Lieth in the reeds and ferns (swamp dweller)**
- ✓ **He drinketh up a river... can draw up Jordan into his mouth (can stand in deep current)**
- ✓ **He moveth his tail like a cedar (huge tail)**
- ✓ **His bones are like bars of iron (strong)**
- ✓ **His nose pierceth through snares (can't be captured)**
- ✓ **Chief of the ways of God. He is BIG.**

Of course, the majority of people today don't believe dinosaurs lived with man at the time of Job or anytime, so let's look at both sides:

Arguments against Behemoth being a dinosaur:

1. Behemoth could be poetic or symbolic — not describing a literal animal.
2. "Behemoth" likely refers to a known animal:
   Many scholars think Behemoth may be a poetic description of a hippopotamus or elephant.
3. Dinosaurs and humans didn't co-exist. Mainstream paleontology places dinosaurs' extinction at about 65 million years ago, long before humans appeared.
4. There is no other biblical or archaeological evidence.

Arguments for Behemoth being a dinosaur:

1. Tail like a cedar (Job 40:17): this suggests a massive, tree-like tail — similar to a sauropod dinosaur like Diplodocus or Apatosaurus. It contrasts sharply with modern animals like hippos or elephants, whose tails are relatively small.
2. Bones like "tubes of bronze" and "bars of iron" (Job 40:18):
   Descriptions of immense strength and durability seem to fit a massive, heavy creature like a large dinosaur.
3. First of the works of God (Job 40:19): Suggests Behemoth was among the most impressive land animals, which could imply something larger than anything alive today. Clearly we are on the side of the creationists. This as a stand alone argument would not be a slam dunk, but when combined with the following science, fossils, scriptures, and historical accounts, it is overwhelmingly convincing.

ARCHAEOLOGICAL EVIDENCE

Dinosaurs and man living together; what a crazy idea in today's age with the dominant theory of evolution and dinosaurs being millions of years old, it is even more unheard of. There is more evidence of man and dinosaur together we will show in the Bible and Book of Mormon along with fossil and historical records. Please note that we will look into the definitions of evolution in later sections, micro vs macro evolution, one based in fact and the other a pseudotheory. As we look through historical records and artifacts the massive amount of dinosaur like animals begins to astound those new to this idea. When compared to the known animals on the artifact, it is clear the animal is foreign to those alive today. In most cases, researchers write them off as myth or a chimeric representation. These long necked animals found on Egyptian pottery are so prevalent they have named the animal a new but mythical, in their minds, creature.

The Narmer Palette is from the ancient Egyptian capital of Hierakonpolis and shows the triumph of King Nar-mer with long necked animals that appear to be in captivity. Although lesser known than Tutankhamuun's golden mask or Nefertiti's bust, the Narmer Palette is hugely significant due to it featuring the oldest hieroglyphic inscriptions yet found. This artifact led the Egyptian Museum in Cairo, where the palette is on display, to describe it as "the first historical document in the world".

Fig 14e.

Mesopotamian Cylinder seals were a common feature of Mesopotamian civilization used to mark ownership, identify individuals, and authenticate documents or containers. Found in modern day Iraq from the Uruk period around 3,500 BC.

With limited room in this book, we will focus only on a few of the more convincing artifacts. In figure 14e. the oxford palette or commonly known as "two dog" palette was found in Hierakonpolis, a site in southern Egypt, during the 1897-1898 dig season by British archaeologists James Quibell and Frederick W. Green. It is now part of the Ashmolean Museum in Oxford. The animals on both sides have been identified as cape hunting dogs. Other animals identified are: gazelle, ibex, Beisa oryx, lions, horned oryx, leopard, Barbary sheep, and others such as winged griffins or an aurochs, and a giraffe.

The long neck animal has been named a "serpopard" as they believe in this instance it is an amalgamation of Leopard and serpent. With the paradigm that dinosaurs went extinct millions of years ago, this is the only explanation. Taking historical records and artifacts at face value is a common theme we follow until there is a theory worthy to write off the extensive examples of these animals as mere myth.

DINOSAURS CONTEMPORANEOUS WITH MAN

Paluxy river formation theropod tracks near human prints.

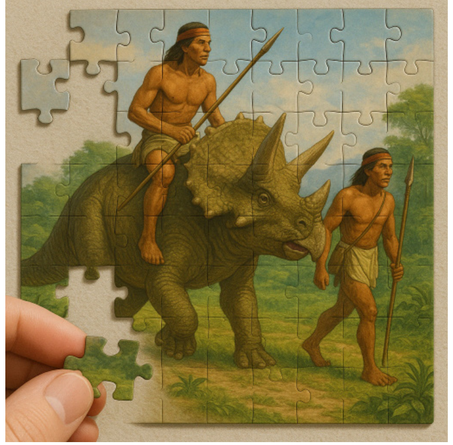

The Paluxy River in Glen Rose, Texas is known for its dinosaur trackways, particularly those of the Glen Rose Formation, which were discovered by a local schoolboy, George Adams in 1909. These tracks were later studied by paleontologist Roland T. Bird.

After some time, locals working to make a living during the great depression excavated more of these prints and testified they had also found HUMAN prints in the same layers!

In 2000, amateur archaeologist, Alvis Delk found a dino track he took home. He decided to sell the track in 2008 and while cleaning it off, noticed under the clay another print that resembled human tracks. This has become an incredible find showing evidence of man and dinosaur living contemporaneously. We will look more into the validity of this find. This area is now Dinosaur Valley State Park, which aims to preserve these track sites and allow people to learn from them.
The front cover of this book shows dino prints with man prints. It is no longer a fun idea but scientifically accurate.

14a. The famous Delk track is an incredible testament to man and humans living together. 14.c shows another angle

14b. Willet print is undeniably human. Found in the same formation

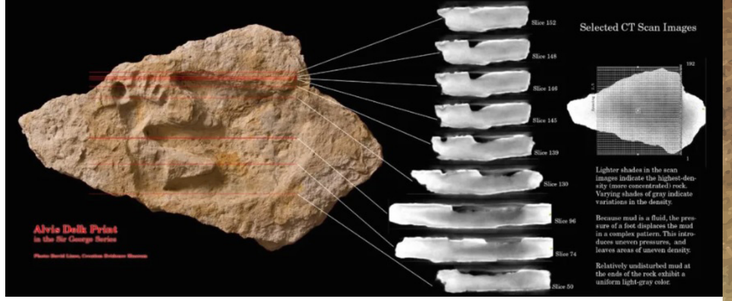

14c. The Alvis Delk print from a side angle shows clear indentation rather than carving. A rare specimen to find on earth and powerful evidence seeing they are in fact touching each other. We now have acquired a 36"replica. Thanks to Bob Wright with the Flood Museum.

Just like the ongoing evolution vs creation debate there is some controversy over these tracks. Stories of people destroying the human prints with a metal bar from one side and from the other side that the tracks are simply unrecognizable or dinosaur prints mis-characterized, or even complete fabrications. While we can't argue all of these points in this short book we will talk of the Delk print and the willet print. Watch the documentary and decide for yourself with the attached website link. (fig14b.)

Others have studied in depth the validity of the tracks. The Alvis Delk track has been under much scrutiny and has withheld its validity over time. Even a full CT scan showed that it is original and not a fabrication.

Our purpose of this book is to touch on broad evidence of science, archaeology, historical, and scriptural evidence broadly to show the overarching picture that all signs point to a special creation by a God who loves us. As the data presented connects the dots I hope you will see the picture come together to show God's grand plan in a clearer way. It is about you. The earth, the beauty, even the hard stuff, is to help you learn, grow, and progress.

Due to accusations of fraud, Carl Baugh at the Creation museum in Glenrose texas takes the artifact in for a cat scan. The willet print found in the same layers was clearly man's print with 5 toes, arch, instep and the works. Any man could have stepped into the print today.

As detailed in "Footprints in stone", (video link in fig14d.) in1972 the tracks were investigated by several scientists:

Douglas A. Block Geologist Ph.D. from Univ. of N. Dakota said "*very frankly, if these were not made by man, we do not know what kind of an animal did produce them"*

Clifford Burdick – Geologist. M.S. from Univ of Wisc.- Ph.D. (Hon) said, *"some of the erosion has removed the detail of the toes, still there's enough to show the shape of a foot, especially when we put a human foot in the track it seems to fit so perfectly, but to me the picture becomes more complete and more convincing all the time; that they were tracks here which could be called human without stretching them too much of a point"*

Paul Wright Chemist and Geologist Ph.D. from Univ of Ohio said,*"if it weren't that this is in cretaceous in the table in the Limestone I don't think there'd be any question but what these are human Footprints but since they're out of place according to geologic timetable then there gets to be considerable question are they really and truly human Footprints I'm not ready to say I'm positive they are but there are so many and again as I say in line they have to have been made by some organism I believe and they well could be human Footprints"*

We don't have room to list all reports: Gerald Haddock, Geologist Ph.D. from Univ. of Oregon, Harold Slusher Geophysicist M.S. from Univ. of Oklahoma, and HENRY MORRIS – Hydraulics and Geology PhD from The Univ. of Minnesota, all gave their testimony in the affirmative, save one. Gerald, from University of Oregon refused to identify them as human. All others guaranteed they were human tracks which you can see for yourself in the images.

Don't take my word for it, dig in to see for yourself with this **QR code** and website (fig 14d.), none of which give any credit to myself.
(https://kolbecenter.org/tracking-humans-on-the-cretaceous-rocks-of-texas-paluxy-river/)

14d. Footprints In Stone 1972 video link

DINOSAURS CONTEMPORANEOUS WITH MAN

The Ica stones in peru are renounced as they are depicting dinosaurs with man riding or hunting them.

The engraved andesite stones first turned up from the property of local farmer Basilo Uschuya, who brought them to the attention of the Dr. Javier Cabrera. Uschuya found the stones in caves and gorges claiming that he had tried repeatedly to get the attention of the archaeological authorities without avail. He began to sell them and was later arrested and confined by the government of Peru for selling national treasures.

He may have reproduced them from the originals to make money. Over the years Uschuya produced hundreds of carved stones and Cabrera became their greatest promoter.

Some of which depict dinosaurs, humans, and advanced technology, sparking debate about their authenticity and origin.

While some may dismiss these artifacts, the museum at Ica Stones Museum in Peru holds the real answer.

Authentic products get copied and pirated all the time. This does not make the original product less authentic. What product today has not been copied and sold at a lower price? Therefore, if the farmer copied the original it does not mean the entire discovery needs to be thrown out as fraud.

Researcher and author, Vance Nelson, documented his recent journey to the Amazon rainforest in Peru.(26c.) He hiked in to locate a painting of what appears to be a long necked dinosaur. The local expert did not know what the animal could be. The image (26.a. and 26.b.) is complete with humans around to demonstrate the, albeit hostile, relationship with the animal and also shows the size scale based on comparison with the humans close by. We cannot tell if it was dangerous and they were protecting themselves or if it was being hunted merely for food. Vance demonstrates how the carbon-14 "plasma oxidation" validates the ancient painting in his book "untold secrets of planet earth". Tests were performed at a secular university in the USA, and the results indicated that the rock wall depiction was painted about 1300 BC – most likely, after a successful hunt! This is animal that lived with man and was apparently hunted here by these natives.

26c. Vance's book "Amazon Expedition" details his expedition and research verifying the age of the mural paint.

26a. up close of the Mayan mural.

26.b mural found painted on cliff wall in Yamon district, Utcubamba province, Peru

On the temple monastery of Ta Prohm in Angkor Wat, Cambodia, there is a carving that some claim depicts a Stegosaurus—a dinosaur known for the plates along its back. The carving is original to the temple and hasn't been altered, suggesting that ancient people must have seen such creatures to depict them accurately.

I visited this very temple in Angkor Wat in 2012. I knew it as the 'Tomb Raider temple' since that is where part of the Hollywood hit was filmed. I sadly was not aware of this field of study at the time and had little interest in science or archaeology since I was full steam into my real estate career. Now I look at this with wonder.
While this can be misconstrued one way or the other, I see it as a dinosaur. I am completely open regarding my bias as a young earth creationist. I hope those promoting evolution will also be forthcoming with full disclosure about their biases. Some argue the animal just has leaves behind or some foliage, however I see it as an animal that is no longer known to our generation. The carving is one of many pieces of evidence that humans lived alongside dinosaurs, supporting my view that dinosaurs didn't go extinct millions of years before humans appeared, as mainstream science asserts. If dinosaurs lived with man then evolution is debunked, mute, and extinct, and we are children of God created with a special creation! It is wonderful. It feels great!

The carving is original to the temple and hasn't been altered, suggesting that ancient people must have seen such creatures to depict them accurately.

The long necked animals depicted on this mesopotamian carving are also a piece in a large puzzle. As we put it together we learn the truth and the picture becomes clear. Middle eastern carvings that have survived rigorous weather for thousands of years depict long neck creatures nothing like a giraffe. Note the long tails as well. here they are necking?

We could have pages and pages of images and artifacts depicting sauropod and theropod like creatures at the time of man. We will try to fit a few in the space we have here. Why are there so many and yet they remain obscure. Are archaeology and paleontology fields of study being hindered by a prevailing theory that says these animals lived millions of years ago and never saw man? Why do others believe they lived so long ago when dragon legends (see page 60-75) and artifacts of large reptiles are prevalent. They have been categorized and placed in different time periods, Jurassic, mesozoic and so forth. But really, how could a person know they existed 65.6 million years ago. We will cover dating methods later showing massive errors in the dating processes.

In Australia this cave art is depicting men throwing spears at a water dwelling creature with a long neck and fins. It apparently ate one of their friends and the men are hoping to get retribution with their spears.

The Dogon tribe of Mali made this creation in the 1800s. (figure 28b.) Author Vance Nelson, compared it to reconstruction of our modern dinosaur depiction of a Gryposaurus. We will talk more on the modern day interpretation of fossil bones. There is a much larger margin of error when dealing with anything from the past.

28a. Australian cave painting

28b. Mali figurines

28c. Fred flinstone lived with dinosaurs!

Bishop Bell's tomb in Gloucester England

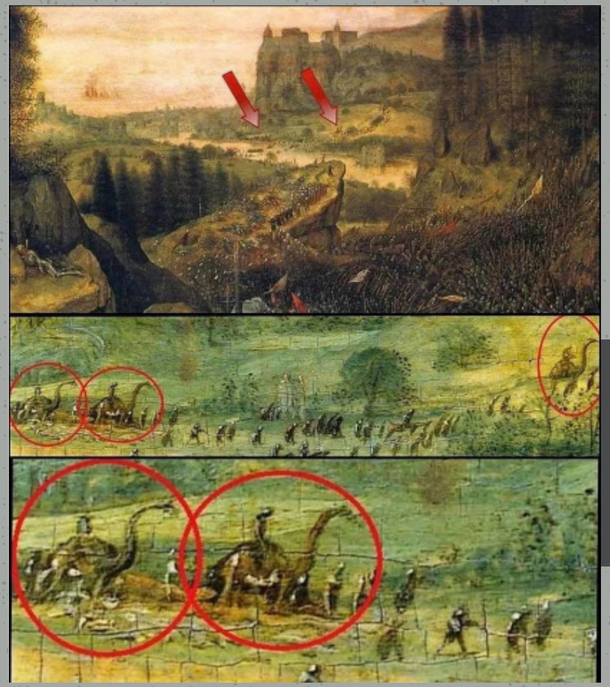

DINOSAURS, DINOSAURS EVERYWHERE!

Richard Bell was born in about 1410 near Gloucester, England. Today his tomb is surrounded with animals etched onto brass. Why are there long necked dinosaur looking animals next to 9 other real known animals today surrounding his tomb? (fig 29c.) I would say it is an animal they knew and lived with just like the eel, the bird, fish, bat and fox. The question is are they going to just call it a myth or name it a serpopard, when it is clearly a long necked sauropod that is no longer around today?

fig 29c. animal depictions carved in brass

30a. The Suicide of Saul oil painting. When looking close there appears to be long necked sauropods with humans on top.

The 16th century oil painting "The Suicide of Saul," (figure 30a.) depicts the final battle scene where saul was slain on the battle field as depicted in 1 Samuel chapter 31. The painting was created in 1562 by Pieter Bruegel the Elder, portraying Saul's defeat by the Philistines, with men seated on top of long necked sauropod-like dinosaurs. Either our eyes are deceiving us or the ancient people thought it was common knowledge to live with these animals. By now the evidence is stacking up pretty high. The problem is a world paradigm has been set and engrained in us from as young as age 2, when a child finds their first love of dinosaurs, up through grade school where the paradigm is emphasized in science classrooms and textbooks.

Mark Twain said "It's easier to fool people than to convince them that they have been fooled." Belief systems go deep into our identity and psyche. Cognitive dissonance is another discussion on the psychology associated with major life changes in beliefs.

Fred Flinstone (30b.) might have been trying to tell something and I wasn't listening at the time. Coexisting with dinosaurs is a fun idea that occupies the minds and hearts of many. Even evolutionist and paleontologist Jack horner wishes he could live with one

31a. close up of the Mayan Bonampak mural

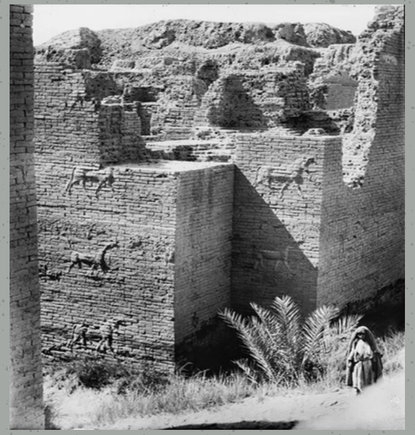

31b. Full restoration of the the temple mural at Bonampak.

The ancient Mayan culture, which flourished around the 6th century, is famous for their excellent artwork. Bonampak is a Mayan archaeological site in Mexico where there are a number of wonderful murals, including the remarkable shown here.(fig 31b.) It shows the presentation of various war captives to the ruler, Chaan Muan, along with some trophy heads (perhaps brought for sacrificing). In addition to the human heads, the men are carrying an animal head and what looks a lot like a dinosaur head (31.a). Both the teeth and the large size make it doubtful that the Mayan artist was depicting a lizard or snake. This Mayan painting shows an animal with a ferocious appearance one might compare to a raptor or an allosaurus dinosaur known today. Mexico also has the Acambara Figurines depicting large serpent-like animals. We are short on space in this edition so we won't be able to add them

The Chinese culture is one of the oldest preserved cultures on earth. They still use this zodiac calendar depicting 11 known animals and a 12th dragon. Why would they have a dragon with these real known animals if it was a mythical creature? This shows the dragon is distinct from a serpent.

Why would Babylonians depict these long necked animals alongside a realistic lion and bulls if they were not animals they had witnessed?

The Ishtar Gate of Babylon was uncovered in Modern Day Iraq in the late 19th century. The excavation of the city gate ruins began in 1899. In 1902 the Gate was found and excavated. After war broke out the excavations stopped until 1979 when Saddam Hussein began to rebuild the ancient gate on the ruins.

The gate is displaying Bulls, Lions, and Dragons. It was built in approximately 575 B.C. Two known animals are displayed with a dragon. The detail is impeccable showing they were depicting known animals in their time. Today Berlin's Pergamon Museum displays these larger replicas of the gate.

CAN THIS BE REAL? AM I CRAZY?

DINOSAURS ARE MILLIONS OF YEARS OLD they say. (See section on radiometric dating errors) There are hundreds of well paid and educated scientists that study this. How could they all be wrong?! They get millions of dollars in grant money and spend thousands of hours studying and researching in universities, and they ensure accuracy with peer reviews of their research, right? They can't all be wrong. Or are they all telling us a lie? That is not possible; how could this be?

THE CHOICE:
Either dinosaurs evolved for millions of years and we evolved from an ape-like ancestor or so many scientists are wrong. How can this be? My mind is blown, my foundation is rocked. Don't we have text books written by good honest authors and scientists who teach truth? How could this be?
I guess the alternative is that God created the dinosaurs and he created you and me and I am something special with a divine lineage to God. But then it would mean evolution wasn't a thing and dinosaurs aren't millions of years old and they lived contemporaneous with man? How could they? They would eat everyone. After all, in Jurassic park we know they eat everyone. Ok, maybe that is a Hollywood movie and maybe they were more reptilian and hid in caves, but how could all the scientists be wrong together? Was there a time on earth that the majority was wrong? Yes, popular beliefs prior to the germ theory discovery caused a lot of deaths. World wars have been fought over large misunderstandings, killing millions in the process; showing that large groups can make major errors. There were terrible wars fought over relatively small disputes. So I guess there could be something wrong.

Or maybe God used evolution? Maybe he let apes run rampant and die for millions of years. Wait there was no death before Adam. What if God put a spirit in an evolved ape. This is confusing. now Maybe God made the earth in millions of years? There is so much information on both sides. Maybe i have to make a CHOICE. Choose God's word or choose Man's ideas.

Going against the grain is uncomfortable. We may have others disagree with us. We may lose friends. As we navigate this and try to speak truth with love we can find those who seek truth and hopefully retain friendships. Are we allowing our bias to step aside as we investigate truth? Will it lead to a better life? Jesus said "If the world hates you, ye know that it hated me before it hated you. If ye were of the world, the world would love

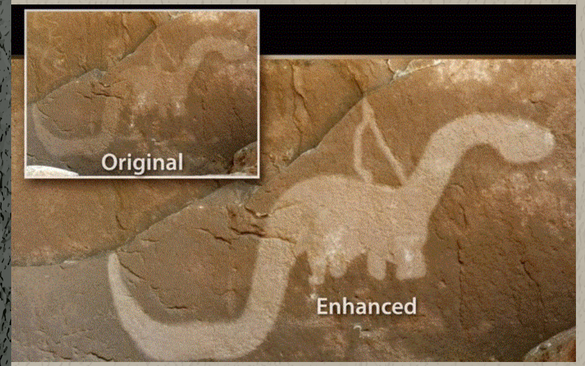

his own: but because ye are not of the world" John 15:18-19. The truth is sometimes hard to accept as Nephi's brothers said "Thou hast declared unto us hard things, more than we are able to bear." 1Ne 16:1. Understandably if this is true it means we must make lifestyle changes that are hard.

I had to know for sure so I looked with my own eyes to evaluate the evidence.

Wait, I need to slap myself, reframe, and get back with the program. I've had these thoughts and others have thrust them on me. They think I'm wearing tin foil on my head or following the wrong ideas. It is great people love and care about me and each other to ensure we do not follow stray paths. But is the mainstream narrative scripturally and scientifically correct?

Being a skeptic at heart, I needed to verify for myself. As I began to learn about dinosaurs and man, I had to verify the references and if possible see for myself. So many things can be interpreted in bias, so i took every chance to personally investigate. I found reference to a dinosaur like carving in Utah.(figure 34a.) So after a trip with friends in Moab, we drove further south to investigate this carving. At Natural Bridges Monument in the Bears Ears area we hiked down a steep canyon at Kachina Bridge. With 2 small children this was a fun but challenging feat. (fig 34c, d) Our oldest boy, after all, began the dinosaur craze in our family.

34a. image of a sauropod dinosaur carved by natives in Utah

Once we got to the bottom we looked around for a minute finding some native American petroglyphs around the back of the arch but no dinosaur. Then I looked up about 10 feet near a cliff ledge and there it was! Carved in stone with what seemed to be chip marks hammered into the rock.

enhanced image of the artifact shared online by creationists

34c. Our growing family and our dinosaur loving boys make the journey.

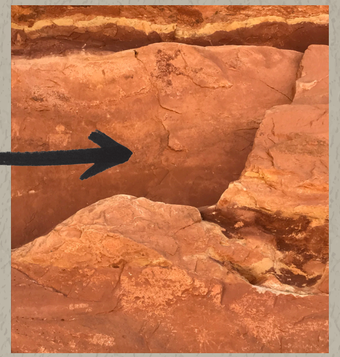

34d. my family under Kachina bridge, natural bridges monument

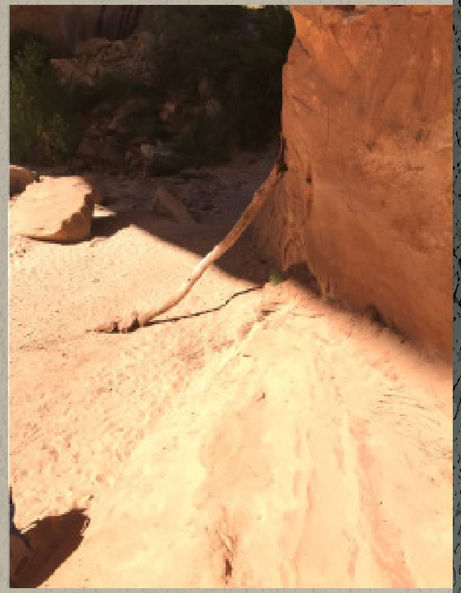

Hiking down into the steep canyon was an adventure with small children. However, the greater challenge lie ahead.

The image was on top of a small cliff ledge but it was too high and too steep to climb. The Native American Petroglyphs were much higher than expected and unreachable by foot.

There was no way to get up on the ledge without a ladder. After looking around for resources we found a fallen tree trunk and some rocks. I was able to rig a clever contraption, to reach our goal.(34f.)It was worth the risk because we had come a long ways to locate this artifact and I had to verify if this was real! Climbing up the log stabilized by only a few rocks was an adventure, but my excitement overtook me and I might have overlooked the way back down. I'm still not sure how it was achieved but I was able to touch the artifact for myself. Something I always yearned to do in a museum but it is all too often behind glass or ropes or rails. It was a thrill to see and touch in person for myself.

34e. image from the ground of the faintly visible petroglyph

34f. The contraption rigged for the ascent up.

I finally made it up the cliff wall to investigate the carving for myself. Finding it was a real native American petroglyph like the others.
It was etched in with what seemed to be hammer and pestol. Many small hammer markings to create the image. It was very intentional.

You can also see other petroglyphs all over the walls. One by my head in the picture to the left. The large standing bird didn't stand out until we looked at pictures later. Although extremely rudimentary in design we couldn't help but noticing the size of the small man next to the bird made me wonder if this was some sort of predatory theropod that they also might have seen.

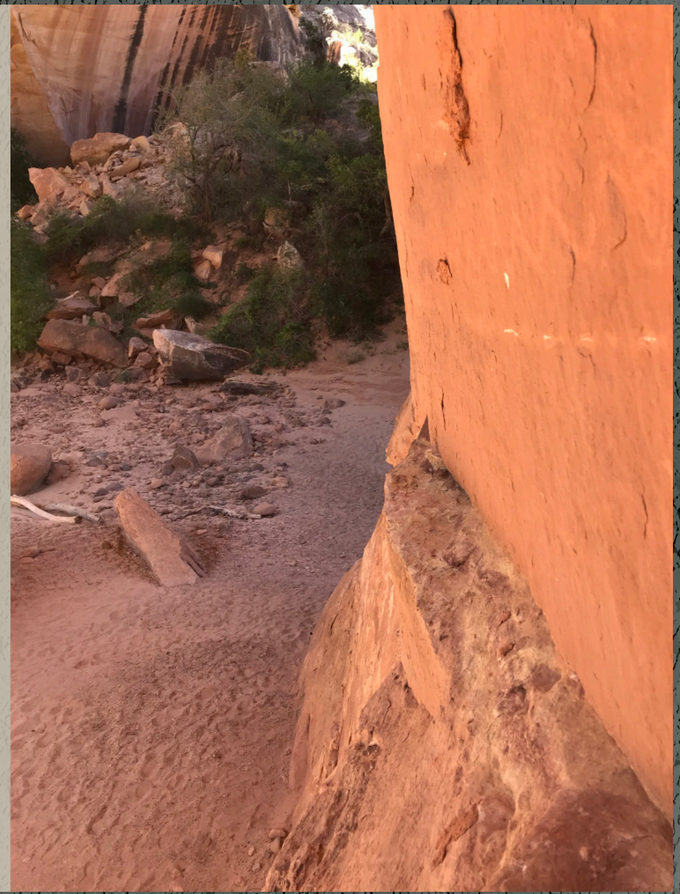

Look at the size of the large bird compared to the small man.

Lastly i had to figure out how to get down. My wife was not going to carry me out if I broke my leg, especially with 2 small children.

The petroglyphs were authentic and interesting. We were happy to have returned home safely and seen amazing, ancient petroglyphs. I was later marveling a the large bird compared to the small man. Without a strong background in science I humbly defer to those who study the artifacts: take a look at the study undertaken to verify if the petroglyph is authentic. Use the QR code to view the document online.

Explore further research on the validity of this find.

Sometimes I hear: "I'm not into dinosaurs, Jeremy" or "It doesn't matter to me if the dinosaurs were millions of years old."

Here are two reasons this is important to everyone:
If you are looking for meaning in your life, knowing who you are and where you come from are vital. If you originated from an ape or from God changes everything. It affects our actions, our goals, and dreams. If we tell our children they originated from monkeys you won't be surprised to find they begin to act like monkeys. (see section on dangers of evolution theory)

The truth always matters. "The truth shall make you free". John 8:32. We could go deeper into this, but ultimately we should seek after and desire truth because truth prevails for eternity and it matters in 1,000 years. Many are confused today about their identity. Some youth are identifying as animals or cats others as different genders. Has there been a time where identity was more confused. Our divinity needs to be protected and there are resources for that!

WHY DOES THIS MATTER?

If the dinosaurs aren't millions of years old there is no time for the supposed mechanism for animals to transition and evolve from one kind to another. It has never been observed in our day. A dog has never given birth to a cat. Deep time is required for this fairy tale to have a chance.

With evolution being the only substantial opposition to giving God the credit for design and intentional creation. Once evolutionary theory is removed there is only a divine creation of all things. This then supports that we are created by God in his image and we are his children, Heirs to his throne and accountable on earth for our actions. Removing God is arguably the biggest motivation for evolutionists. In a trial case we would find the motive and the mechanism. We have, and will identify and dissolve both of these.

Many who have spent their lives studying scripture and internalizing doctrines of divine identity might be less swayed by pseudoscience and false doctrines.

Whereas, others may have been swayed some by the supposed consensus seen by the masses. Surveys of college students have substantiated this. This is ongoing. Ask us more about this research in the future.

CHANGING OUR PERCEPTION

"You are the lens through which you see the world" Stephen Covey

As we look at the data with NEW EYES we can see a totally different picture.

We will show you later how the prevailing paradigm has hindered real scientific discovery. When people let false assumptions lead, progress is blocked.

This is common to all people. We have inherent and undeniable bias in our actions, simply because we are human. We have experiences and beliefs that influence the data we process and how we interpret that.

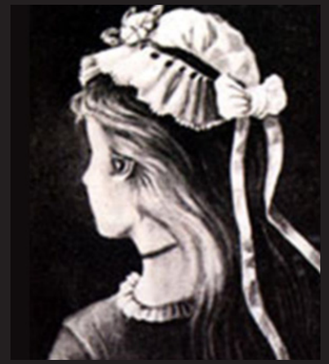

My bias is clear; I come from a religious view. I want to prove the scriptures accurate and true.

Are scientists disclosing their biases and the "glasses" to which they interpret the data? In the section on Lucy the "missing link" we will show the strong bias of the discoverer.

Jesus taught *"For this people's heart is waxed gross, and their ears are dull of hearing, and their eyes they have closed; lest at any time they should see with their eyes, and hear with their ears, and should understand with their heart, and should be converted, and I should heal them. But blessed are your eyes, for they see: and your ears, for they hear."* (Matthew 13:15-16)
Many are blind to truths right in front of their faces and they won't see the data or the evidence.

Again, "Who hath ears to hear, let him hear," (Matt 13:9) thus teaching that we have to seek for and desire to learn or we might miss it. Many will still scoff (2 pet 3:3) and explain it away because it won't meet their worldview or their lifestyle. Following Christ might require making changes and that can be hard.

Do you see an old woman or a young lady?

Perception can change with new data.

Do you see a woman's face or a man playing instrument

FIERY FLYING REPTILES

1 Nephi 1:17 – "*…because of their iniquity. He sent* **fiery flying serpents** *among them; and after they were bitten he prepared a way that they might be healed; and the labor which they had to perform was to look.*"

What kind of creature could have been biting the Israelite people?

"The Lord sent fiery serpents among the people, and they bit the people; and much people of Israel died…And the lord said unto Moses, Make thee a fiery serpent, and set it upon a pole: and it shall come to pass, that every one that is bitten, when he looketh upon it, shall live" Num 21:6-8

In numbers 21:6 they were referred to as fiery serpents and then in the Book of Mormon the same with one addition, the ability to fly. This was most likely due to the Isaiah verse that shares this added ability to fly. Now in Deuteronomy 8:15 they look back on the experience and reference the serpents again with scorpions also being present in the desert along with drought, referring to the perils in the desert. Isaiah 14:29 and 2 Nephi 24:29 connect this animal with a cockatrice *"for out of the serpent's root shall come forth a cockatrice, and his fruit shall be a fiery flying serpent."* Isaiah 11:8 again mentions cockatrice with a known animal, the venomous asp. The Cockatrice apparently lived in a den. We continue to learn more Isaiah 59:5 showing this animal lays eggs to reproduce. With references all the way into Jeremiah where the lord warns them again to repent or threats of sending *"serpents, cockatrices, among you, which will not be charmed, and they shall bite you, saith the Lord"*

Based on the descriptions of the cockatrice's homes, reproduction, and ability to attack it is no doubt a real animal that we may not have around today. In addition we can reference this to a similar time period across an ocean, where the Jaredites also had poisonous serpents chase their people and their flocks away from their homes, nearly to destruction.

In 2 Kings 18, Hezekiah begins to take down the idols and worship only the Lord God. One of the idols was Nehushtan or the brazen serpent created by Moses. (fig 40c.)

40b. Draco Aethiopicus, from Ulysses Aldrovandi. Could this ancient painting be a closer representation of a fiery serpent or the cockatrice? Serpentum et Draconum Historiae (1640; printed book; London, British Library)

Figure 40c. Hezekiah destroys Nehushtan. Bible Illustrations by Belbello da Pavia in 1434 (Vatican Library codex Barb.lat.613 Bible of Niccolò d'Este, p. 200.)

This image (Fig 40c.) shows a different depiction of a serpent than might immediately come to mind. This is a flying serpent more like figure 40b. a dragon like animal that can fly. Something like a dimorphodon as we would know it today from fossils.

Rumors of winged serpents in Egypt persisted until the late 15th century. Note the long tail behind the serpent and the large wings stretched out. The winged serpent, or wadjet, became the symbol for Lower Egypt, as the vulture was the symbol for Upper Egypt. There is even a hieroglyph for the winged serpent (note the Egyptian limestone pendant pictured below in the center). The world famous gold throne of King Tut (below right) has winged serpents forming the arm rests. The winged serpent was revered as the protector of the Pharaohs and controller of the Nile waters. In some of the mythology, she was the daughter of the sun god, Ra. She was a fierce goddess and had the ability to eject a bright flame. (dragon is shown on p. 817 of Dr. Francisco Hernánd)

Bestiaries are ancient books documenting the animals of the time. Figure 42a. and 42b. show pages from the book referencing something similar to a flying serpent with a tail like a serpent but wings like a bird. Such an oddity in our day that it is hard to be believable.

Herodotos, A Greek historian documented serpents that could fly. *"These winged drakontes were said to live under frankincense (Boswellia) trees in the Arabian Desert. To gather the incense, the Arabians burned styrax (resin of the Liquidambar tree) because the smoke drove the winged snakes away. Herodotus described the flying reptiles as small with variegated markings, shaped like a water snake but with wing like membranes, like bat wings."* (https://www.wondersandmarvels.com/2013/03/flying-snakes-in-ancient-egypt.html)

Fiery or poisonous seem to almost become synonymous with each other in the text. Fiery could mean poison when spewing out of their mouth. The reference is interchangeable in 2 Nephi 25:20 referencing the fiery serpents to *"poisonous serpents"* a physical trait that is not unheard of in our day with the power of a skunk, electric eel, snake venom, or even bombardier beetle producing heat spray out of its rear end. Another theory is that of glowing iridescence. As fire produced light in ancient times, this might explain the fire attribute of this flying serpent. This article documents sightings of a flying animal similar to this pictured above in the modern day on the islands of Papua New Guinea. They have sightings of a ropen that flies at night and has bioluminescense glowing somewhat like a fire.

42c. re-creation of the possible ropen sighted in Papua New guinea might be similar to flying serpents and those seen by Herodotous

42a. Kongelige Bibliotek, Gl. kgl. S. 1633 4° (Bestiarius - Bestiary of Ann Walsh).

42b. from the Museum Meermanno, MMW, 10 B 25.

A decaying dragon is shown on p. 817 of Dr. Francisco Hernández' landmark book Rerum Medicarum Novae Hispaniae Thesaurus (published in 1651)

A SYMBOL OF FOLLOWING JESUS CHRIST

The reference of the brazen serpent held by Moses was a lesson applied to the family of Lehi where he taught the spiritual significance of the suffering and salvation offered in the recorded event. ***"and because of the simpleness of the way, or the easiness of it, there were many who perished."*** They were taught to look unto Jesus Christ just as they were to look at the brazen serpent to be healed from their wounds.

This teaching moment was to allow us to learn from physical, mortal lessons to look for spiritual growth and strength to him who can heal us if we but come unto him.

Look to Jesus Christ for Healing.
Look and you shall live.

BOOK OF MORMON REFERENCES

The Jaredites were chased from their homes by poisonous serpents.
"And there came forth poisonous serpents also upon the face of the land, and did poison many people. And it came to pass that their flocks began to flee before the poisonous serpents, towards the land southward, which was called by the Nephites Zarahemla.
32 And it came to pass that there were many of them which did perish by the way; nevertheless, there were some which fled into the land southward.
33 And it came to pass that the Lord did cause the serpents that they should pursue them no more, but that they should hedge up the way that the people could not pass, that whoso should attempt to pass might fall by the poisonous serpents. (Ether 9:31)

The word serpent is ambiguous at times. The Chinese zodiac shows a snake and a dragon. This should help us separate the two ideas. While a snake is a serpent, a serpent is not necessarily a snake.

The word "***dragon"*** in English ultimately stems from the Ancient Greek word ***"opakwv"*** (drakon). **Meaning: "Drakon" translates to "serpent or giant seafish".**

Now that we have separated the word serpent from other reptile-like animals that might be extinct from the earth and wiped from our knowledge and understanding, we can group these creatures into another taxonomy other than that of snakes.
What type of animal could chase them out of their homes that they would flee? Was this similar to the poisonous serpents encountered by the Israelites? If they could hedge up a wall of death they must be some serious animals. (fig 44a.) I for one would fight for my family, land, and freedom.

In order to get more information about the situation with these serpents WE DUG DEEPER! The following chapter 10 again mentions the serpents. "And in the days of Lib the poisonous serpents were destroyed. AND THEN "Wherefore they did go into the land southward, to hunt food for the people of the land, for the land was covered with animals of the forest."

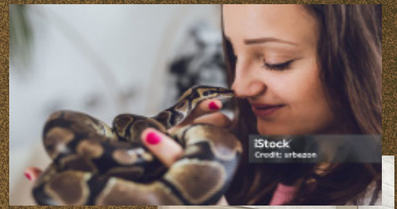

Later we see that the land northward was covered with people. It seems like these creatures were hindering their hunting grounds in the land south. If we look closely we find that the Lib spoken of was nearly 9 kings (fig 45a.) after the serpents first terrorized the people. Why didn't they go HUNT in the land southward for 9 generations!? We will estimate low that a generation was 23 years. The math gives us 207 years that these beasts inhabited their forests before they were exterminated. First they were large enough to hunt and count their numbers down to 0 and Second, it was notable enough for Moroni to write this event on the limited space he had on the plates. I doubt these are snakes, we hold and play with snakes as pets. (Fig 45c-g) With the additional references of dragons in the Book of Alma and the fiery flying serpents spoken of by Lehi we can conclude that this was most likely an animal that is largely extinct today and not causing us trouble. We have bears and mountain lions today. We hunt them and chase them out of our cities. Sounds like this is what they finally did with the Jaredites after more than 200 years!

GENERATIONS
1. Heth
2. Shez | "live to exceeding old age, did build up many cities"
3. Riplakish | "lived 42 years,"
4. Morianton | "exceedingly great age,"
5. Kim
6. Levi
7. Corom | "and after he had seen many days he did pass away"
8. Kish
9. Lib | "The poisonous serpents were destroyed"

Men, could these snakes chase you from your home?

ARE THESE THE SNAKES THAT COULD CHASE YOU AND YOUR FLOCKS AWAY FROM YOUR LANDS?

GATHERING DATA

If I was to say I went to my class today - We could observe the evidence. Science is: "the systematic study of the structure and behavior of the physical and natural world THROUGH OBSERVATION, experimentation, and the testing of theories against the evidence obtained."

THE PAST CANNOT be observed. Therefore we have to fill in the blanks or assume some of the data. This leaves room for error and guesswork. This is not foolproof science because it cannot be observed in the present. The same goes for future predictions that have not been observed. This causes a lot of controversy over historical events.

The LEGAL approach relies on Testimony. In order for this to work we require VERIFIED TESTIMONY from someone who was present to observe and witness. The errors here could be someone who has a poor memory or lies. In addition, perception can be distorted or misinterpreted.

However someone who has seen the event could know more accurately what happened. If we obtain more witnesses we can verify accuracy by comparing. This is stated in 2 Corinthians 13:1, "in the mouth of two or three witnesses shall every word be established".

Do we look at historical testimony today as accurate? Or are anthropologists and scientists throwing little credibility to what they sometimes call the savages of the past.

I like to give the benefit of the doubt to our ancient ancestors especially when there are many writings about the same event.

The debate goes on about the bible and other records for accuracy in translation etc.
However, the recent discovery of the dead sea scrolls have verified the accuracy of the book of Isaiah, in particular, that 1,700 years later retained its accuracy.

DEAD SEA SCROLLS | VERIFYING ANCIENT RECORDS

The Dead Sea Scrolls, being significantly older than previously known biblical manuscripts, provide strong evidence that the transmission of the Hebrew Bible's text over centuries was remarkably accurate, confirming the reliability of the Masoretic Text.

The Dead Sea Scrolls discovered between 1947 and 1956 in eleven caves near Khirbet Qumran on the northwestern shore of the Dead Sea (currently know as the West Bank), are the oldest known copies of biblical texts. These Scrolls predate previously known manuscripts by about a thousand years.

The Isaiah Scroll, dating to the first century BC, is a notable example of a complete book of the Hebrew Bible preserved in the scrolls, and it is considered the earliest Old Testament manuscript still in existence.

DEFINING EVOLUTION

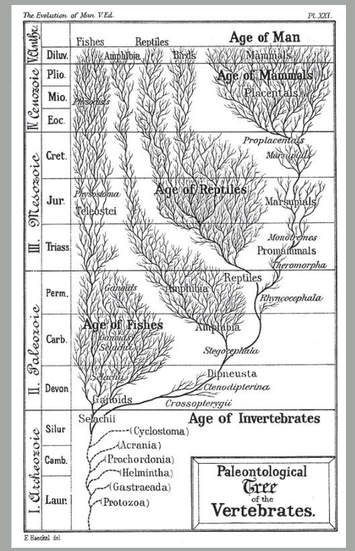

Figure 48a. Birds with variation within their kind, never changing into a rabbit or lizard.

Defining terms is important before we move on too much further. We always refer to Macroevolution in this book.

MACRO - EVOLUTION: Definition-Evolution occurring at and above the species level, encompassing the origin of new species and higher taxonomic groups. This book seeks to examine the lack of evidence for Macro-evolution; when referring to "evolution" it is Macro-evolution that is on topic for the duration of the book. The general term "evolution" has become synonymous with both micro and macro. Micro evolution is observable through scienctific discovery. However, macro is not observable because it supposedly took millions of years and we cannot observe that. Even with special equipment or forensic analysis there still is not enough information.

MICRO EVOLUTION, or variation in species, is observable as in the picture of the birds. They have different colors, beak sizes, feathers and are so numerous it is hard for the ordinary person to name them all. They also are all very much the same kind of animal. They are all birds. No one has ever observed or seen evidence of a bird evolving from a lizard, worm, frog, newt, or any other kind. As a matter of fact God's law is immutable that all animals *"reproduce after their own kind"* Gen 1:24

This fake family tree is not observed in science and is a fairy tale (see fig 48b.)

48b. Evolution family tree. One of many diagrams not substantiated by good, observable science

Before we begin a discussion about evolution science we must define terms. Evolution has been used to describe so many things it has become fairly ambiguous. Today we might hear references such as, a business or company "has evolved" or that a culture "has evolved". Is evolve simply synonymous with change? Satan wants us to get caught up arguing about generalities when problems are solved in the details. If my kids come to me and one is crying, I must first ask questions. "What happened?" I"ll ask. He will explain that his brother hit him. Now I could immediately punish the brother or more importantly, dig deeper. Usually I find he hit for another reason yet to be revealed and they are both partily at fault. We don't want to discuss the smoke when the details are the fire. Put out the fire and the smoke goes away also. We do see evolutionists trying to push false pseudo-theories that focus on general terms to build concensus and buy-in without digging deeper. Many people don't put in the effort to study, and they seem to make it difficult to research the papers and

Whenever engaging in a discussion on such topics, it is important to define terms.

There are others types of evolution as well:

- ⇛ **Cosmic evolution: the origin of time, space, and matter from nothing in the "big bang"**
- ⇛ **Chemical evolution: all elements "evolved" from hydrogen**
- ⇛ **Stellar evolution: stars and planets formed from gas clouds**
- ⇛ **Organic evolution: life begins from inanimate matter**
- ⇛ **Macro-evolution: species change from one type into another, only in dream land.**
- ⇛ **Micro-evolution: variations form within the "kind"**

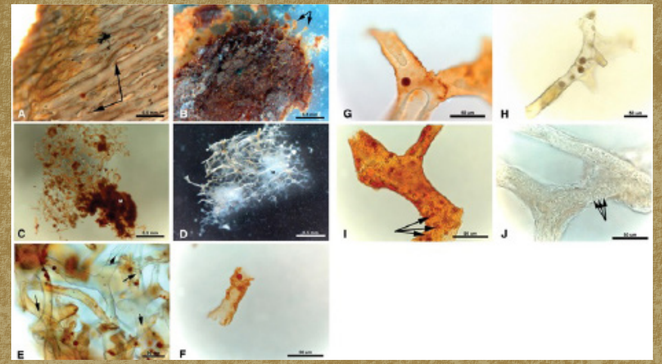

Of these theories, 5 are complete smoke and the only real observable one is micr-evolution. You must define terms before going down a long path of discussion, dissection, or debate in order to have a successful outcome. Many will say "I believe in evolution." Respond with "Well, what kind of evolution?" You might find the other party's arguments are cut in half once defined terms are placed upfront.

OBSERVABLE SCIENTIFIC EVIDENCE

We have focused on historical evidence from ancient carvings, paintings, artifacts, and historical writings and scripture. Now we will touch on observable facts today that substantiate the hypothesis that dinosaurs are only thousands of years old. The soft tissue discovery in dinosaur bones is a miraculous event for the world! This was a SHOCKING discovery to all scientists. Jack Horner, who is world renowned for his consulting work for the Jurassic park movies. Said he was "shocked'. Watch the video with the link. (Fig 51b.) Have you heard of this before?

Mary a Paleontologist at North Carolina University
2005 - Mary Schweitzer finds soft tissue in Dinosaur bone!

51a. images from dinosaur bone of the soft tissue discovered.

The 2005 Journal Abstract states:

"Soft tissues are preserved within hindlimb elements of Tyrannosaurus rex (Museum of the Rockies specimen 1125). Removal of the mineral phase reveals transparent, flexible, hollow blood vessels containing small round microstructures that can be expressed from the vessels into solution. Some regions of the demineralized bone matrix are highly fibrous, and the matrix possesses elasticity and resilience. Three populations of microstructures have cell-like morphology. Thus, some dinosaurian soft tissues may retain some of their original flexibility, elasticity, and resilience."

In the year 2000, Bob Harmon, chief preparator of paleontology at the Museum of the Rockies, discovered a Tyrannosaurus skeleton in the Hell Creek Formation in Montana. In order to transport the heavy bone by helicopter, they had to cut the bone in two pieces.

Dr. Mary Schweitzer, who was mentored by Jack Horner as a paleontologist, studied the bone before it was repaired. Dr. Schweitzer requested a piece of the femur for destructive dissection and chemical analysis. Mary, who had a Ph.D. in Biology was going to look at the bone from a completely different perspective.

She applied a solvent designed to remove the hard minerals from the bone allowing her to examine the remaining soft material under a microscope.

Under the microscope, Schweitzer observed structures that resembled tiny blood vessels, various types of proteins, and even what looked like individual red blood cells.

Schweitzer's findings were published in the journal Science in 2005. The world was stunned, and quite frankly disbelieving. (Fig 51a.)

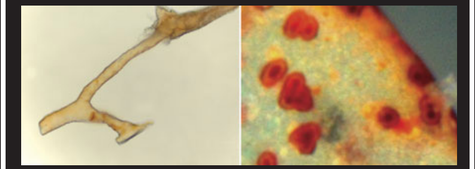

Researchers published a paper in PLoS ONE in 2008 that challenged the idea that the material found in the T. rex bone was soft tissue, but a later study in 2010, also published in PLoS ONE, supported Schweitzer's original conclusion.

Remember this was supposed to be impossible. Mary said later in 2018 *"and again this is not supposed to be possible so we repeated this about a hundred times and didn't tell anybody for over a year. I was scared to death."*

She was so skeptical she presented her slide *"This is our dinosaur.. and it also has red round things in it but I'm not going to speculate what that is."*

Watch her report on this QR code here.

The discovery was an accident because they never expected to find soft tissue in supposed 66 million year old bone. She told her assistant to "do it again." Even 16 times they did it and got the same result. As proper science goes it was REPLICABLE.

51b.

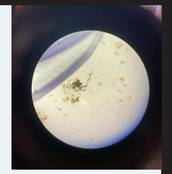

These soft tissues are an earth shattering discovery. Many scientists oppose it. Rather than jump on to aid and support the new discovery they cling to their long held beliefs.

This groundbreaking Discovery in the peer review process was not well received. They believed it was "impossible" and they thought the samples were contaminated. But this has now been proven to be real soft tissue without any infiltration or corruption in the samples.

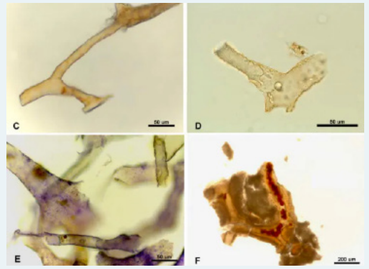

Schweitzer said "I didn't want to tell anybody. She was worried that she would be ridiculed for the discovery. Why would that be?

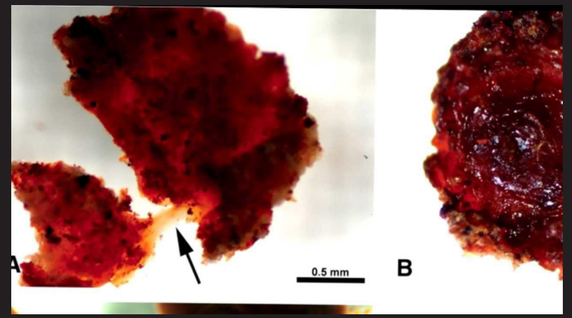

She was in fact attacked. Thirteen years later, in 2018, she reported other scientists were still "trashing her in the press". Why would scientists fight this discovery? Schweitzer later reported that she waited an entire year to tell scientists about the initial discovery. Why wouldn't they be excited to learn new revolutionary information? What prevailing theory or worldview would cause them to oppose this? BONES!? This evidence is another reason we believe that dinosaurs were not millions of years old. These tissues last around 30,000 years.

Soft Tissue in Dinosaur Bone:

What I personally saw in a microscope:
credit: Vince Newmeyer

This evidence suggests that dinosaurs were not millions of years old.

These tissues only last around 30,000 years.

An outlier study shows 900,000 years. but that is a far cry from 65-150 million years.

Watch the 60 minutes soft tissue discovery interview here.

WHY WAS HER DISCOVERY SO CONTROVERSIAL?

Schweitzer's Dangerous Discovery

by BARRY YEOMAN on APRIL 1, 2006

When this shy paleontologist found soft, fresh-looking tissue inside a *T. rex* femur, she erased a line between past and present. Then all hell broke loose.

Originally published in Discover.

EVER SINCE MARY HIGBY SCHWEITZER peeked inside the fractured thighbone of a *Tyrannosaurus rex*, the introverted scientist's life hasn't been the same. Neither has the field of paleontology.

Two years ago, Schweitzer gazed through a microscope in her laboratory at North

https://www.discovermagazine.com/the-sciences/schweitzers-dangerous-discovery
https://www.youtube.com/live/gXHS_c6AHkQ?si=J4oWDLjYTQqCJnAR&t=931
https://www.youtube.com/live/gXHS_c6AH

Mary said "and again, this is not supposed to be possible, so we repeated remember this was not supposed to be possible, so we repeated it about 100 times we did it again and this time test 16 times before reporting it. And she waited a year. Which is NOT a required part of the scientific method. But she is working on falsifying it. This is how science is to be done.

Iron in the blood; they are now looking to see how it can last so long. Iron in hemoglobin when released is now being shown to preserve soft tissue. Not to the extent 150 million years.

The only problem here is the underlying assumptions that have not been reassessed. NO ONE has asked "COULD these fossils be younger thank 66 million years old?"

THE PREVAILING THEORY in every text book and museum is that they are millions of years old.

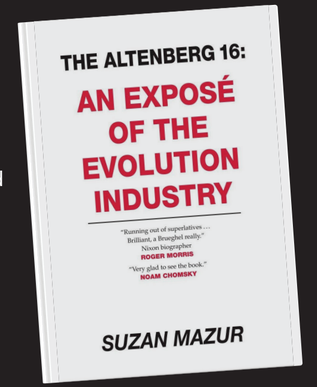

Remember, if they are not millions of years old this throws a wrench in the narrative of evolution. A massive wrench.

This is an industry with hundreds and thousands of scientists and support staff and universities teaching and profiting from this. Millions upon millions in government grants. They have so much to lose.

IF EVOLUTIONARY THEORY FAILS, GOD WINS. Many do not want that.

It is said that 9 in 10 evolutionary scientists are atheist.

Some now argue the theory is in crisis. The Altenberg 16 group called for an extended evolutionary synthesis to redress the data and arguments supporting long held evolutionary fundamentals.

THIS IS GOOD SCIENCE

SCIENCE IS REPEATABLE, FALSIFIABLE, AND OBSERVABLE.

"There is no conflict between science and religion. Conflict only arises from an incomplete knowledge of either science or religion, or both," (Elder Russell M. Nelson Apr 14, 2015)

Remember, scientists do science. The word science is used as a large conglomeration of knowledge. Scientists are people too. They make mistakes, have feelings, emotions, and even bias. Of course this is the case when lives have been dedicated to careers and funding involved. (fig 54b.)

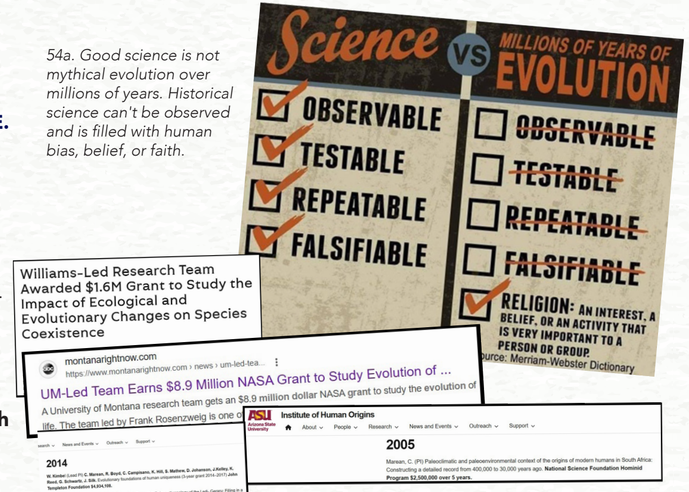

This might be the reason the discovery has been met with intense opposition:

A) The research is hard to refute because it was done right. They are now assuming iron was the preservation agent. But this still does not get them to the time of the Jurassic period (65-190 million years old) They ASSUMED for decades that this wasn't even possible and therefore never even tried. The theory comes before the data.

You would think there would be collaboration on such a breakthrough. *"The problem is, for 300 years, we thought, 'Well, the organics are all gone, so why should we look for something that's not going to be there?' and nobody looks,"* Schweitzer said. This demonstrates the power of personal bias and the effect of worldview beliefs on scientific advancement.

B) They have a lot to lose. Museums, text books, and entire research programs are built around evolutionary theory. Careers are dependent on the flow of money supporting the narrative. This is how pseudoscience becomes institutionalized and entrenched. It is not conspiracy. It is massive groupthink.

54a. Good science is not mythical evolution over millions of years. Historical science can't be observed and is filled with human bias, belief, or faith.

54b. so little is released to the public disclosing the grants awarded but here is a small peak at the academic industry. Grants are good for research and discovery within operational science. Just not to fuel a failing pseudo theory.

CONCLUSION: the biological and molecular sciences are showing that soft tissues cannot preserve more than a million years and most likely around 30,000 years maximum. At the very least the ages assigned to the bones are widely inaccurate and at most the entire evolutionary paradigm is in crisis. But as you will see it is not without opposition.

Those that believe science is without bias need to look closer at the human aspect that goes into any field of study. Religion is heavily opposed by many scientists. Why would that be?

We will get into other dating methods in question and the entire narrative about how the dinosaurs died.

NOW OTHER SCIENTISTS ARE DISCOVERING THIS.

Mark served as the Manager for the Electron and Confocal Microscopy Suite in the Biology Department at California State University Northridge. Mark was suddenly terminated by the Biology Department when his discovery of soft tissues in Triceratops horn was published in Acta Histochemica.

In 1984 he founded a microscope sales and service company and has been in business for 29 years. He was awarded a US patent for an optical inspection device in 1993.

Mark's micrographs have appeared on the covers of eleven scientific journals, and he has many technical publications on microscopic phenomena in such journals as American Laboratory, Southern California Academy of Sciences Bulletin, Parasitology Research, Microscopy and Microanalysis, Microscopy Today and Acta Histochemica

Mark Armitage, managed the Northridge biology department's electron and confocal microscopy suite starting in 2010. In 2012, during a digging trip to Montana's well-known Hell Creek Formation, he found a massive triceratops horn. Beyond its unusually large size, Armitage found something even more significant inside: soft tissue.

Mark made the discovery and was subsequently fired. *"Mark's article was pure science,"* Reinach said. *"The article only presented his findings, and did not mention anything about his creationist beliefs."*

Another defendant in the case was CSUN biology professor, Dr. Ernest Kwok, who became Armitage's new supervisor in June 2012. The lawsuit stated that in the weeks leading up to his termination, Dr. Kwok confronted Armitage while in

55a. Mark and soft tissue her found from a triceratops horn

his lab, and allegedly shouted, *"We are not going to tolerate your religion in this department."* (https://sundial.csun.edu/107775/news/former-csun-employee-receives-legal-settlement-from-the-university/)

The univeristy settled for $399,500 outside of court. Settling could mean that CSUN worried they might lose in court.

Mark Armitage won a $399,500 settlement with California State University for wrongful termination.

WHAT IS UP WITH CARBON AND RADIOMETRIC DATING?

Now you think I'm a science denier. You are asking: ***"Don't scientists have rigorous testing methods for accurately measuring dates of rocks and fossils? Don't you trust carbon dating, Jeremy?"***

Good question. How can we possibly know the age of a rock? Do they have a date stamped on the back? (fig 56a.) Radiometric dating determines the age of materials by measuring the decay of radioactive isotopes, using the known half-life of these isotopes to calculate the time elapsed since the material formed.

Certain atoms, known as radioactive isotopes like 14, are unstable and spontaneously decay into more stable forms like C12, a process called radioactive decay.

Each radioactive isotope has a characteristic half-life, which is the time it takes for half of the parent atoms to decay into daughter atoms. (fig 56b.)

56a. representation showing don't have dates stamped on them.

Scientists measure the ratio of the remaining parent isotope to the daughter isotope in a sample.
By comparing the ratio of parent to daughter isotopes to the known half-life of the parent isotope, scientists can calculate the age of the sample. Radiometric dating has been carried out since 1905 when it was invented by Ernest Rutherford as a method by which one might determine the age of the Earth.

Radiocarbon Dating: Used to date organic materials (like bones, wood, and charcoal) up to about 50,000 years old.
Uranium-Lead Dating: Used to date rocks and minerals that contain uranium, allowing scientists to determine the age of rocks and minerals that are millions or billions of years old.
Potassium-Argon Dating: Used to date volcanic rocks and minerals, particularly those that contain potassium.

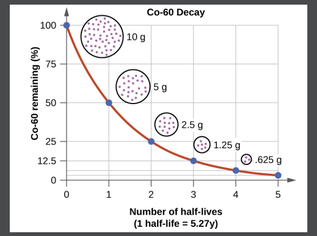

Radiometric dating, while a powerful tool, can be prone to errors due to assumptions about the closed system and constant decay rates, potential contamination, and isotope fractionation, which can lead to inaccurate age estimations. HOW CAN WE KNOW if the formula is accurate?
The formula is accurate. Yes, I said that. The formula is accurate. It is the assumptions and inputs that are throwing off the dates. Radiometric dating has been carried out since 1905 when it was invented by Ernest Rutherford as a method by which one might determine the age of the Earth. In the century since then the techniques have been greatly improved and expanded.[19] Dating can now be performed on samples as small as a nanogram using a mass spectrometer. The mass spectrometer was invented in the 1940s and began to be used in radiometric dating in the 1950s. It operates by generating a beam of ionized atoms from the sample under test.

If one of the 3 critical assumptions is off the dates can be far off.

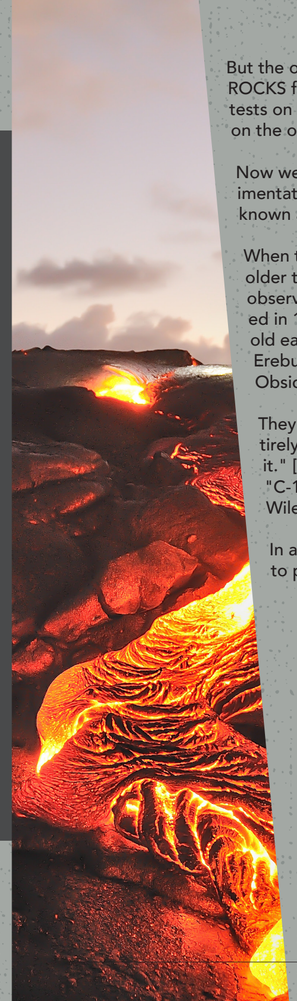

1) **No daughter atoms or decay products were initially in the system.**
2) **Parent and daughter atoms cannot leave the system**
3) **Constant decay rate: the rate at which the parent atoms decay must have been constant in the past and the same as today's measured rates.**

Research credit: Contested Bones, Rupe, Sanford, 2017 pg. 250

This is a lot that has to have remained perfect for the entire duration of the rock, which they are assuming is millions of years.

56b. Half-life formula displayed

But the only way to test the accuracy of the formula is to USE KNOWN AGES OF ROCKS for the control. The known ages come from fresh lava flows. The radiometric tests on known ages have been consistently far older than the rock is known based on the observed flows.

Now we have discussed science before as defined by the observation and experimentation of known factors. In testing the results of these dating methods with known ages we are employing the scientific method. (see figure 57a.)

When tested with the known ages the Lava flows on Hawaii's Kilauea were far older than the known age of the newly formed igneous rock. In 1959 the flow was observed and the radiometric result was 8.5 million years. Mount Etna, Italy, erupted in 1792 and the newly formed igneous rock was tested at 350,000 years. With old earth timelines also showoing for Mount Stromboli, Italy; Rangitoto, New Zealand, Mount Erebus, Canada, and Sunset Crater, Arizona. Additional failed tests include Mount St Helens and Obsidian from California. Hear a video explanation (fig 57c.)

They said ""If a C-14 date supports our theories, we put it in the main text. If it does not entirely contradict them, we put it in a footnote. And if it is completely 'out of date', we just drop it." [Professor Brew, quoted by T. Save-Soderbergh (Egyptologist) & Ingrid Olsson (Physicist) in "C-14 Dating and Egyptian Chronology" in Proceedings of the Twelfth Nobel Symposium, John Wiley & Sons: New York, 1970 p:35; (see also Diggings, August, 1990 p:8)]

In addition to these results we are also seeing test results vary so wildly that scientists have to pick one like the one that hits the dart board. (fig 57d.)

57d. Trying to get the correct date for the specimen.

57c. further radiometric dating education

57a. known ages of lava flows and their radiometric age show large discrepencies

Table 1. Young rocks from recent eruptions (<1000 years old) yield greatly exagerated apparent ages. The data used in this table was retrieved from mainstream scientific journals.[7,8,9,10,11,12]

Location	When Lava Extrude	Measured Age
Hualalai basalt	1800-1801 A.D.	1.6 million years
Mount Etna basalt	122 B.C.	0.25 million years
Mount Etna basalt	1792 A.D.	0.35 million years
Mount Lassen basalt	1915 A.D.	0.11 million years
Sunset Crater basalt	1064-1065 A.D.	0.27 million year
Kilauea basalt	<200 years ago	21 million years
Kilauea basalt	<1,000 years ago	42.9 million years
Kilauea basalt	<1,000 years ago	30.3 million years
Kilauea Iki basalt	1959 A.D.	8.5 million years
Mount Stromboli	1963 A.D.	2.4 million years
Hualalai basalt	1800-1801 A.D.	22.8 million years
Rangitoto basalt	<800 years ago	0.15 million years
Mount Erebus	1984 A.D.	0.64 million years
Mount Etna basalt	1964 A.D.	0.7 million years
Medicine Lake obsidian	<500 years ago	12.6 million years

In general, dates in the "correct ball park" are assumed to be correct and are published, but those in disagreement with other data are seldom published nor are the discrepancies fully explained.

They have it all figured out already. If it doesn't match the defined and categorized layers they throw it out or pick new dates. Fig 58a. shows the layers everything is now based on. In a later section we will show the actual process of formation and age of these layers.

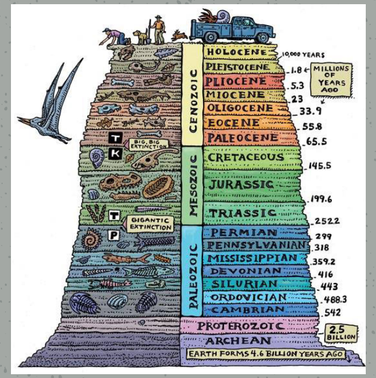

Fig 58a. Layers of the earth's strata immortalized

Carbon Dating Dinosaur Bones

If Carbon Dating only goes back 50,000-100,000 years you can't test a dinosaur bone. right? WRONG. They have tested actual dinosaur bones and gotten results in the 20,000-40,000. Now we have 2 data points lining up with the soft tissue discovery. While we know the dating methods are not entirely accurate, what we do know is the millions of years theory is off the shelf. Two dots begin to point in a straight line. Now you add history, scriptures, and personal witnesses to dinosaurs and we have a strong case in court. Too bad there isn't a court for science. I guess that is called peer review. But the peers are biased in one direction.

Here are some tests that worked:

2012 – Paleochronology Group (Thomas Seiler, Hugh Miller, et al.)
Samples tested: Dinosaur bones from various museums and dig sites, including a Triceratops horn from Montana and an Allosaurus. (fig 58b. example of testing dinosaur bones for C14)
C-14 Results: Reported radiocarbon ages between 20,000 and 40,000 years for several dinosaur specimens. These are well within the detectable range of carbon-14, suggesting a much younger age than the conventional 65+ million years.

RATE Project (by the Institute for Creation Research)
Samples: Coal, diamonds, and some fossil bones.
Results: Claimed consistent detection of measurable C-14 in ancient materials supposedly millions to billions of years old, including dinosaur-related materials.

2015 – Mark Armitage (Creation Research Society)
Sample: Soft tissue from a Triceratops horn in Montana.
Result: Claimed to extract soft, flexible tissue with measurable C-14.

More three studies have produced C14 in dinosaur bones verifying the bones are not from the Paleozoic era 65 million years ago.

fig 58b. example of testing dinosaur bones for C14

MASSIVE CASE OF SCIENTIFIC GROUP THINK

As discussed in this book. **How could so many scientists be wrong? How could this go under the radar for so long?** The kindest notion is a bad case of group think.

As noted with Mary Schweitzer's discovery *"all scientists get to thinking alike."*

In order to get a PHD it has to be reviewed by only those who have first entered the club, and if you punish or ridicule those who don't think like you group think might begin to devolop. Don't take my word for it. Look at Ben Stein's documentary. Remember him from Ferris Buellers day off? "BUELLER, BUELLER!" his research is interesting and the documentary informative. Please watch it all. (fig 60b.) It is free on youtube but the version to purchase is out there as well.

In the seminal work Groupthink: ***Psychological Studies of Policy Decisions and Fiascoes*** (1982), Irving L. Janis begins by examining a number of well-known fiascoes, including the Bay of Pigs, escalation in Vietnam, and Watergate—episodes that came to be judged fiascoes even by those responsible for them. Janis starts with defectiveness and seeks to explain the absence of correction. He defines groupthink as "members' strivings for unanimity overriding their motivation to realistically appraise alternative courses of action." He declares the term's "invidious connotation"(9). His complete research is (fig 59b) In the seminal work Groupthink: Psychological Studies of Policy Decisions and Fiascoes (1982), Irving L. Janis begins by examining a number of well-known fiascoes, including the Bay of Pigs, escalation in Vietnam, and Watergate—episodes that came to be judged fiascoes even by those responsible for them. Janis starts with defectiveness and seeks to explain the absence of correction. He defines groupthink as "members' strivings for unanimity overriding their motivation to realistically appraise alternative courses of action." He declares the term's "invidious connotation"(9).

Another approach is to follow the money. What is their motivation and is there money involved. There have been statistics thrown around that are debatable showing that 90% of scientists are atheists. Do they have something to protect?

The Grants given to evolution studying institutions are now in the 100s of millions.(fig 54b.) NSF (national science foundation) Grants planned for Biological sciences 2024 was $789,000,000.59 (https://www.nsf.gov/funding/opportunities/hominid-human-origins/5320/nsf09-521)

Fig 59a. Gunnar Myrdal, swedish economist who received the Nobel Memorial Prize in Economics Sciences

"Generally speaking, we can observe that the scientists in any particular institutional and political setting move as a flock, reserving their controversies and particular originalities for matters that do not call into question the fundamental system of biases they share."

—Gunnar Myrdal, Objectivity in Social Research

"Perhaps we avoid studying our institutional lives because such work is not valued by our colleagues. The academy is, after all, a club, and members are expected to be discreet. Like any exclusive club, the academic world fears public scrutiny. Research is in the public domain. Outsiders might use what the research reveals against the academy."

—Richard Wisniewski, "The Averted Gaze"

OR IS IT INTENTIONAL?

The scripturs warned us of this time: 2 Peter 3:3-4
"Knowing this first, that there shall come in the last days scoffers, walking after their own lusts 4 And saying, Where is the promise of his coming? for since the fathers fell asleep, all things continue as they were from the beginning of the creation. 5 For this they willingly are ignorant of, that by the word of God the heavens were of old, and the earth standing out of the water and in the water:
6 Whereby the world that then was, being overflowed with water, perished:"

THEY DENY the catastrophic flood, Noah and even down to Adam and Eve and the creation. The heart of the doctrine is what is under attack. Our divine identity is what is at stake. This is an eternal war. We will cover the flood very soon. Other events happened like this at the time of Christ's arrival in America.

Is this too strong of an attack on academia? Am I being too bold? Well, there are many great scientists and educators. There are however a great many who comply with the norm of the group and go along, a group now called theistic evolutionists. The church is getting gutted from within. A wolf from within is far more dangerous than one outside the gates. The fox guarding the hen house as they say.

60a. an example of a learned man relying on his own strength.

Again we are warned in scripture 2 Nephi 9:28 "When they are learned they think they are wise, and they hearken not unto the counsel of God, for they set it aside, supposing they know of themselves, wherefore, their wisdom is foolishness and it profiteth them not. And they shall perish." Education is good if we don't take pride home with their degree.

The humility to understand God knows more than we, and that we must rely on him to have truth revealed. We are about to cover creationist scientists and the good they bring.

So then, if dinosaurs are in fact less than 30,000 years old; How old is the earth really? when did they die?! How did they die? Did they all die?

See this link about how deep the infiltration of academia has gone. (fig 60b.)

We have established dating methods and soft tissue discoveries of dinosaur bones showing they are not millions of years old. So how old are they really and how did they die?

Fig 60b. documentary: No Intelligence allowed

There are many scientists who believe in the scriptural accounts and study the science behind it.

I'll be the first to admit, I'm no scientist. That is where I get all my information, from the creation scientists! Here are a few scientists that have made groundbreaking discoveries. **Science can bring us closer to the creator!**

These Scientists recognized God as their creator:
Isaac newton (1643-1727): A renowned mathematician, physicist, and astronomer, Newton is best known for his laws of motion and universal gravitation. He also believed in a divine creator (fig 61b.)

Robert Boyle, (1627-1691): A pioneer of modern chemistry, Boyle is known for his work on gases and is considered one of the founding fathers of chemistry. (fig 61a.)

Louis Pasteur, (1822-1895): A chemist and biologist, Pasteur is famous for his work on pasteurization and his contributions to the development of vaccines. (fig 61a.) He believed in a divine creator and saw his scientific work as a way to understand God's creation.

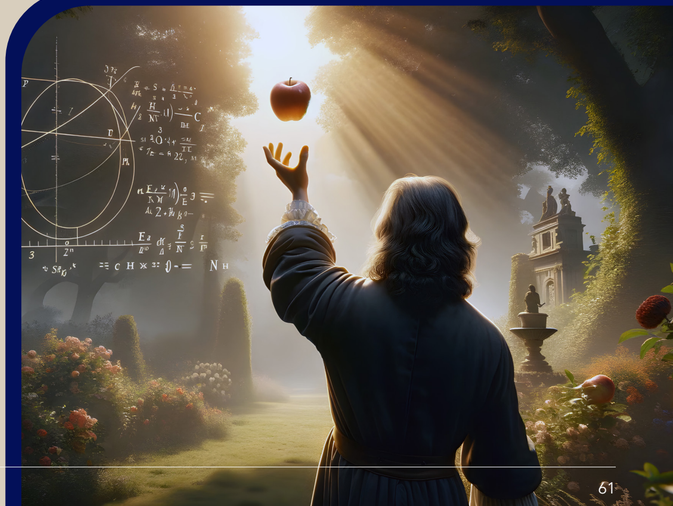

Johannes Kepler (1571-1630): An astronomer and mathematician, Kepler is known for his laws of planetary motion.

As well as these working hard today and every day:
Dr Paul Ackerman, Psychologist
Dr. James Allan, geneticist
Dr. Steve Austin, Ph.D. in geology
Dr. John Baumgardner, Ph.D. in geophysics and space physics
Dr. Donald Chittick, Ph.D. in physical chemistry
Dr. Tim Clarey, Ph.D. in geology
Dr. Ken Cumming, Ph.D. in biology
Dr. Vernon R. Cupps, Ph.D. in nuclear physics
Dr. Raymond Damadian, Pioneer of the MRI Scanner

61a. Science is a noble career when adhering to principles of truth.

61b. Isaac Newton developing breakthroughs in physics, math, and astronomy

HOW AND WHEN DID THE DINOSAURS DIE?

Did God bring other earths together and some had bones on it? First off, He used "matter unorganized". A dinosaur bone seems organized to me. Secondly, Based on the uniform layers spread across the globe and the bones being nearly the same layers close to the surface there is a more straightforward answer.

The bones are often found in large bone beds or mass graveyards showing evidence of either rivers sweeping them into a single location or more accurately a worldwide cataclysmic event that swept the earth at the same time period. Let's look at these graveyards. Afterwhich, we will find more answers to align with our hypothesis by examining the process of fossilization which will explain how something as fragile as an egg or a jellyfish could become petrified. Bone beds are located in Spain (fig 62a.), Morocco, China(fig 63 a,b.), Madagascar, Canada, and Utah. to name a few. But ultimately they are located on every continent on earth, including antarctica. (fig 62b.) The hadrosaur bone bed site in Eastern Spain in total could number over 500, and possibly as many as 900. They discovered the fossils when they were excavating to put in a railway system in 2006. To date they have uncovered 8,000 bones from 8 different species. These graveyards have such similarities to each other. Notice they are ALL buried by mud and sediment. If they weren't could the bones even fossilize? Do bones fossilize today?

62a. Cuenca of eastern Spain: BURIED IN MUD AND SEDIMENT LAID DOWN BY WATER

62.b Today we are finding mass graveyards dotting the GLOBE. ALL buried in the same time period by the same matrix materials: mud and sediment. These are only the discovered ones.

Paleontologists say 5,000 dinosaur fossils have been excavated from a "fossil wall" in Puan Township, China. The wall is 150 meters long, eight meters high and two meters thick. The unearthed fossils belong to at least five dinosaur kinds, such as ornithopods, sauropods and stegosaur. (fig 63b. & 63c.) Notice they are all buried by sediment and mud in water or by rivers, is what the secular scientists say.

63a. China fossil wall: BURIED IN MUD AND SEDIMENT LAID DOWN BY WATER

63b. Read more here: https://www.geologyin.com /2017/06/giant-dinosaur-fossil-wall-discovered.html.

In my home state of Utah we marvel at the huge wall of dinosaur bones all mixed together in one location. (fig 63c, 63d, 63e) Before I began to learn the truth we visited with our kids (see image on page 1) after asking the local ranger told me they were buried by flowing down a river and all gathering in the mud and sediment. That held me off for a bit until I learned there were similar bone beds all across the world.

63c. Up close view of the wall of bones. BURIED IN MUD AND SEDIMENT LAID DOWN BY WATER, Dinosaur National Monument, Vernal Utah

63d. Interior view of the wall

63e. Vernal museum built right on top of the fossil wall

FOSSIL GRAVEYARDS CONTINUED: A MASS DYING

Canada's Dinosaur Provincial Park is well-known for being one of the richest dinosaur fossil locales in the world. Fifty-eight dinosaur species have been discovered at the park and more than 500 specimens have been removed and exhibited in museums around the globe. at one location in the canadian monument, a bonebed of hundreds of Centrosaurus remains was discovered. Some researchers believe that the animals died in a flood and were deposited together. They are estimating more than 1,000 centrosaurs were buried here:

Madagascar's Mahajanga Basin has shown huge discoveries of Berivotra Study Area, from which we have recovered approximately 20,000 specimens and 50 taxa of fishes, frogs, turtles, lizards, snakes, crocodyliforms, ptero-saurs, non-avian dinosaurs, birds, and mammals.

63b. Mahanga Basin, Madagascar Fossil Beds

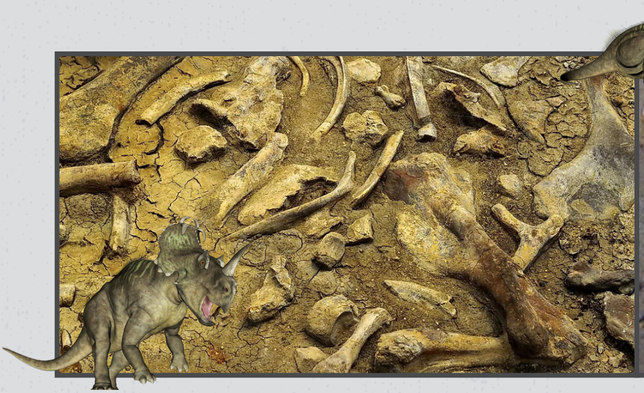

Once again, There is a flood of evidence, the whole world over so a few pages doesn't cover it. We have just focused on the most popular mass graveyards. However you probably know of one near your city that we haven't mentioned.

In Agate Springs, Nebraska a fossil graveyard of around 9,000 animals was found buried in alluvial deposits. They had so many deposits many of the recoveries have not been The remains of hundreds of rhinos, menoceras, (fig 64b.) three-toed horses, camels, giant wild boars, birds, plants, trees, sea shells and fish are mixed and intermingled in great confusion. (fig 64c.) The Agate Paleoriver watering hole yielded so much material, that many bone slabs are still not processed -- 100 years later! However, paleontologists estimate that 70 percent of the watering hole bone bed is still un-excavated within the Fossil Hills. The amount of fossil material is astounding.

GOBI DESERT

The Gobi Desert in Mongolia is renowned as one of the richest areas in the world for the discovery of dinosaur fossils, including the Velociraptor, protoceratops, Gallimimus, Tarbosaurus, and saurolophus skin. Digging began over a century ago, around 1920. (fig 65c.) Saurolophus's skin was so well preserved you can see the texture. (fig 65a.) The velociraptor was made famous by the Jurrasic Park books and movie trilogy. However, the raptors were similar to the Utah Raptor not a velociraptor, but we can tell which name strikes more fear into the heart. The velociraptor was actually barely larger than a dog. (fig 65d.) This fossil site will forever be the original home of this immortalized creature. (fig 65b.) The richest fossil site in the Gobi is the Flaming Cliffs (Bayanzag).This famous site, where the first dinosaur eggs were discovered, is known for its orange-red rock formations and the discovery of dinosaur eggs and skeletons, including those of Citipati (a relative of Oviraptor).

65a. Saurolophus skin is well preserved.

65d. Velociraptor size is not what the movies depict

65b. famous velociraptor skeleton entangled with a protoceratops.

The last page of mass graves and bone beds, I promise! But I hope you are seeing the point that this was a worldwide event. Maybe the scriptures are true and accurate that "all the high hills, that were under the whole heaven, were covered... and every living substance was destroyed which was upon the face of the ground, both man, and cattle, and the creeping things" Gen 7:19,23

66a. Moroccan fossils for sale. Crocodilian creatures

66c. a full wall of orthoceras fossils

Morocco contains some of the world's richest fossil sites and has seen international interest from fossil collectors since the early 20th century. As interest in collecting fossils grew in the late 20th century, the Moroccan fossil trade grew into a lucrative industry of its own. More than 50,000 Moroccans earn their living in mining, trading or exporting fossils and the industry itself is worth more than $40 million annually. Just imagine 40 million in fossils each year. How many dead things are there? What a catastrophe it was.

66b. enough trilobites to fill a city dump fossilized

MASSIVE CATASTROPHIC WORLDWIDE FLOOD

The news tells the story: Fossils are found buried by mud and sediment. Secular scientists say they fell into a river, ocean, or were buried in a local flood etc. Everywhere you look, flood, mud, water, sea, repeat. We see this as evidence of the Universal flood. Rapid burial. It was a rapid burial. We are seeing animals still giving birth and others still eating prey. (fig 67a.) They were "swiftly buried, perhaps due to violent shaking of their home." (fig 67d.) It has also been reported about Canada's Centrosaur bone bed that it was from a "monster storm" like hurricanes today that hit the coastal area. (fig 67c.) They were in an ancient flood plain. (Fig 67b.)

New fossils may capture the minutes after the dinosaur-killing asteroid impact

A North Dakota site appears to hold fish, other organisms swiftly buried in the strike's wake.

DEEP IMPACT These fossil fish, discovered in North Dakota, were swiftly buried in mud, perhaps due to violent shaking of their home. The fossil site, researchers say, gives a never-before-seen view of the sky a giant asteroid struck, [illegible] 66 million years ago.

Found! Biggest stash of dino bones

Thursday, 21 July 2005 Jacque van Santen ABC

A huge dinosaur graveyard, the biggest haul of dinosaur bones found in Australia, has been discovered in Queensland.

The find includes more than 60 mostly complete dinosaur bones and the best Cretaceous sauropod remains yet found in Australia.

Sauropods were some of the largest dinosaurs that walked the Earth. They ate plants, and had small heads and extremely long tails and necks.

Palaeontologists say the bones found near Winton, in western Queensland, come from a range of different sized 'long neck' sauropod dinosaurs.

This supports the theory that the site is an ancient flood-plain deposit dominated by dinosaurs during the late Cretaceous period around 95 million years ago.

"This is amazingly exciting," says Scott Hocknull, a palaeontologist and assistant curator of geosciences at Queensland Museum, part of the research team.

Hocknull adds that more than 150 dinosaur bones have now been unearthed during the three-year dig.

TRILOBITES

Something About This Mysterious Fossil Graveyard Was Fishy

For decades, paleontologists have tried to explain what they assumed was a 230-million-year-old scene of mass death.

figure 67b.

Dino-holocaust linked to monster storm

Dino-holocaust linked to monster storm

Scientists have revealed what may be the world's largest dinosaur graveyard. The dinosaurs may have been part of a mass die-off resulting from a monster storm, comparable to today's hurricanes, which struck what was then a coastal area.

Figure 67c.

67a. Some were buried so quickly they didn't have time to finish dinner.

Swiftly buried in mud perhaps due to violent shaking of their home. Uniformitarianism has been replaced with the asteroid theory due to the massive amount of evidence for catastrophic events.

In order to drive the point home we have more evidence. We are showing theropad dinosurs in the "death pose" like they were drowning and choking moments before death.. This is found in so many fossils. The evidence is lining up. History, archaeology, science, scripture! (Fig 68d.) We keep saying a flood of evidence the world over. The popular belief is a high mountain to climb. a goliath to beat. The theory is in every school, every university, every museum, and has all of the funding, all the news outlets and media. So we have to make a convincing case that aligning science and faith is possible and it is being done. Please join us in this belief, in the facts, and in this cause! This "Death pose" is common among dinosaur skeletons. Additionally they are now finding evidence of suffocation in the bones.

Figure 68c. Rapid burial, in muddy "poridgy" waters

Fossils provide universal evidence of rapid burial, and even agonizing death. Rapid burial is necessary to entomb organisms as the first step in fossilization. (fig 68c.)

More research on the "death pose" reveals the theory to be accurate:

Post-Mortem Submersion: Some researchers suggest that submersion in water after death, along with the decomposition process, can cause the body to take on this posture.

Catastrophic Events:
Some researchers suggest that mass drownings of dinosaurs could have occurred during catastrophic events like floods or tsunamis.

Avian Simulation:
Researchers at Brigham Young University conducted a simulation using chicken carcasses to study the dinosaur death pose, finding that immersion in water caused the necks to arch immediately.

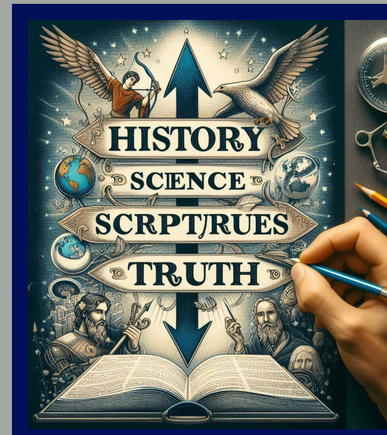

Figure 68d. The facts lineup and point to heaven!

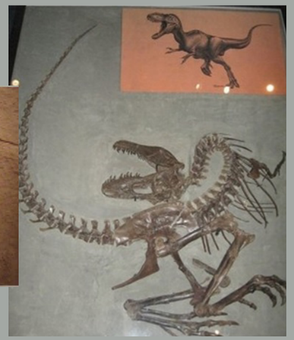

Figure 68a & b Arched neck showing drowning and choking before death.

THE SCIENCE OF FOSSILIZATION

Dean sessions put aside a lucrative real estate career to research and share a new millenial science, a science filled with inspired geology and gospel aligned principles. The Universal Model studies the universal flood in intricate detail. (fig 69a.)

Research for the book began decades before being published. He began research in the 1990s and on April 6, 2017, Volume I of the UM (The Earth System) was released in hard copy to the public. Volume II (The Living System) was released digitally in September 2017. Volume III (The Universe System) is in process.

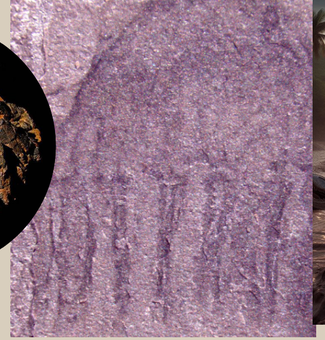

Fig 69a. Dinosaur eggs to preserve?

I feel the spirit when I read the mind blowing revelations of how a gelly fish could possibly be fossilized. Once again decades have gone into this exhaustive and revolutionary science.

A gellyfish has no bones so how on earth could it fossilize? (Fig 69c.) How do you get a Petrified jelly-Fish over millions of years? YOU DON'T.

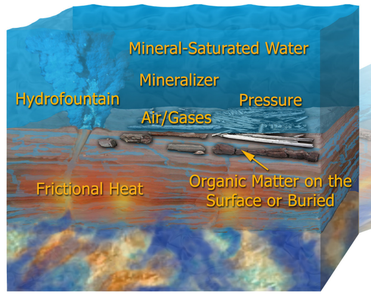

THE TRUE FOSSIL MODEL IS FOUND HERE: Secular scientists do not know how these formed! Universal science is all throughout this book. It is a deep and exhaustive expose into biological and geological processes describing real events on the earth through factual observation. Dean's work will revolutionize scientific truths for those who open the pages of his 2 and soon to be 3 volumes.

69c. petrified jellyfish.

Hyprethermal Fossilization Process

Each of these factors are a part the hyprethermal fossilization process.

Dinosaurs were buried rapidly by mud and sediment. Otherwise scavenging, rot, and decay would have taken place.

THE SCIENCE OF FOSSILIZATION

It is clear that dinosaur remains were rapidly buried before substantial scavenging could take place. Remains of dinosaurs that were washed into the fluvial systems are found buried in actual river channels, whereas others are found out on the former floodplains at the location where they fell and were covered by sediments from floodwaters that breached river banks.

Studies by taphonomists (paleontologists who study the transition of animals from the biosphere to the lithosphere; taphonomy literally means "burial laws") have shown that organisms that die on land in lush jungle locales are rarely fossilized. In these settings, there is little chance of being buried, scavenging vertebrates and insects are prevalent, bacteria that break down flesh and bones are abundant, and the soils are extremely acidic and tend to dissolve bones.

"As we brushed back the sediment, well-preserved white bones appeared. The skeletons, still arranged as they had been in life, looked as if they had been resting peacefully for millions of years. We guessed that the creatures had been buried in minutes, PERHAPS BY A FLASH FLOOD of an ancient river" (Sereno 1996: 116).Sereno, P. 1996. "Africa's Dinosaur Castaways."National Geographic 189, no. 6.)

Today deer, and elk, and cow bones are rotted, decayed, and scavenged in only 5-10 years before they are completely gone. NOT fossilized or petrified.

American colonials killed millions of bison on the plains of the midwest. None of these fossilized or went through petrification. They needed to be in the correct environment for fossilization to occur. The mass event during the Universal flood was uncommon and extremly rare. It was as God commanded.

Fossilization and petrification was for the most part a one time event on earth. ***"We guessed that the creatures had been buried in minutes, perhaps by a flash flood of an ancient river"*** (Sereno1996: 116).Sereno, P. 1996. "Africa's Dinosaur Castaways"

No fossils have been seen forming today. It took a special event to create the fossil eggs. As taught in the Universal Model. They would have be

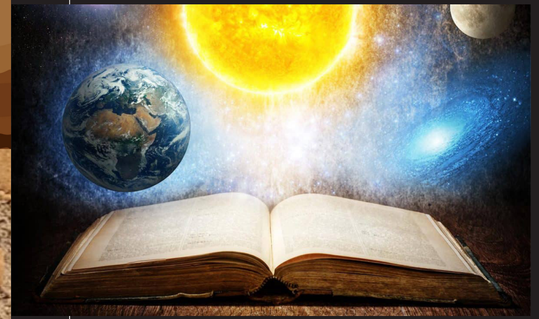

One unlucky day this landlubbing animal ended up dead in a river, possibly swept in by a flood. The belly-up carcass wended its way downriver—kept afloat by gases that bacteria belched into its body cavity—and eventually washed out into the seaway, scientists surmise.

The Amazing Dinosaur Found (Accidentally) by Miners in ...

THERE IS SCIENCE IN SCRIPTURES

"There is no science in the scriptures" some may say. It is only a spiritual account. Yes, prophets, mostly focused on spiritual matters but THERE ARE a few events that show temporal events accurately and all things are connected to the spiritual world. They are trying to keep God out of science by clearly delineating between the two. Could this be a ploy to take God out of the creation? Yet we see the scriptures are still an accurate record of spiritual and temporal or scientific events. Could there be some accurate scientific evidence in the scriptures?

Examples of science in scripture:

Heliocentrism: "this is so; for surely it is the earth that moveth and not the sun" Helamen 12:15

Earth and planet movement: "All things denote there is a God yea, even the earth... and its motion, yea, and all the planets which move in their regular form do witness that there is a supreme creator."
Alma 30:44 This shows that the earth and planets do move and is evidence of a great creator!

Reproduction: "and God sad, Let the earth bring forth the living creature after his kind,"
Genesis 1:25 we see no "transitional species" animals that interbreed between kinds usually become sterile.

Reproduction: "And God blessed them, saying Be fruitful, and multiply, and fill the waters."
They reproduce naturally, spontaneously, and in abundance as God commanded.

Joseph Fielding Smith said, "The Bible is not a textbook of science. In the first chapter of Genesis, however, because it is a matter of the greatest religious importance, the Bible speaks clearly and finally on a matter of biology. After its kind is the statement of a biological principle that no human observation has ever known to fail. The most ancient human records engraved on stone or painted on the walls of caves bear wtiness to the fact that horses have ever been horses, dogs have ever been dogs, pigeons have ever been pigeons, elephants have ever been elephants. The most desperate and subtle efforts of man in modern times have been unable to alter this divine decree." Man his origin and desitiny page 117.

REALITY OF THE FLOOD

PETER WARNED OF SCOFFERS DENYING THE FLOOD.
(2 Peter 2)

[2] That ye may be mindful of the words which were spoken before by the holy prophets, and of the commandment of us the apostles of the Lord and Saviour:
[3] Knowing this first, that there shall come in the last days scoffers, walking after their own lusts,
[4] And saying, Where is the promise of his coming? for since the fathers fell asleep, all things continue as they were from the beginning of the creation.
[5] For this they willingly are ignorant of, that by the word of God the heavens were of old, and the earth standing out of the water and in the water:
[6] Whereby the world that then was, being overflowed with water, perished:

All things continuing as they were from the beginning is a uniformitarianism point of view with things slowly evolving over millions of years.

Scriptures speaking of a flood in every major book of scripture:

- D&C 138:41 ***"Noah who gave warning of the flood"***
- Moses 7:34 ***"And the fire of my indignation is kindled against them; and in my hot displeasure will I send in the flood upon them,"***
- Mathew 24:38 ***"For as in the days that were before the flood they were eating and drinking, marrying and giving in marriage, until the day that Noe entered into the ark,"***
- Genesis 6:17 - ***"For I, even I, do bring a flood of waters upon the earth to destroy all flesh"***

UNIFORMITARIANISM

Uniformitarianism, a core principle in geology and other historical sciences, states that the processes shaping the Earth (and other phenomena) have remained consistent throughout time, allowing us to understand the past by observing the present.

"The present is the key to the past"

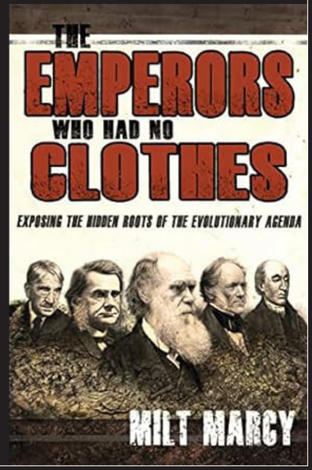

This is a common, though simplified, way of understanding uniformitarianism, which suggests that the geological processes we observe today (like erosion, sedimentation, etc.) have also operated in the past, shaping the Earth's surface. Uniformitarianism, as originally formulated by James Hutton and popularized by Charles Lyell, emphasized gradual change over long periods, contrasting with the idea of sudden, catastrophic events.

19th century geologists, Lyll and Huxley, anxious to get away from religious doctrines of a great deluge, sought to instill a new science of gradualism. Some say this began a dark age of geological science.

The "Emperor who had no clothes" is an informative read spelling out the intentional designs of those who sought to take God out of science. Milt Marcy's research tracks the dishonest pseudo-scholarship of leading evolution champions, including attention to how religious humanism has lent a helping hand to secular humanism, in the crusade to impose evolutionary dogma as the shibboleth of modern culture.

"Darwin was a biological evolutionist, because he was first a uniformitarian geologist. Biology is pre-eminent to-day among the natural sciences, because its younger sister, Geology, gave it the means."— Charles Lapworth
Darwin brought "Principles of Geology" on his infamous voyage on Beagle. The book focused on deep time and long earth geology. Thus shaping some of Darwin's ideas.

It is interesting how so few men have influenced so many psuedo theories to dominate our culture.

CATASTROPHES IN THE BOOK OF MORMON

76a

76b. Christ descending in America to heal the people.

While scientists have left the idea of pure uniformitarianims due to the numerous data points suggesting cataclysmic events have shaped our earth, the scriptures have always testified of earth shaping geological events such as the time when Christ arrived in america and the massive worldwide flood of Noah.

Believers in the Book of Mormon have known these catastrophic events can come.

We see the Geologic destruction before Christ came to America:

"all these great and terrible things were done in about the space of three hours—and then behold, there was darkness upon the face of the land.
9 And the city of Moroni did sink into the depths of the sea, and the inhabitants thereof were drowned.
10 And the earth was carried up upon the city of Moronihah, that in the place of the city there became a great mountain.
12 behold, the whole face of the land was changed, because of the tempest and the whirlwinds, and the thunderings and the lightnings, and the exceedingly great quaking of the whole earth.
(3 Nephi 8:19)

Massive destruction in the Americas in only 3 hours! (fig 76a.) The scriptures spoke of an actual flood that killed all flesh. The fossils show it, the history shows it. It was real. God brought the flood to save the righteous. We can seek him for safety then and now. See the peace and hope he brings as he descends to the American people. (Fig 76b.)

MOUNT ST HELENS - CATASTROPHE

On March 27, 1980 the world was shocked to see this explosive event. An eruption column rose 80,000 feet (24 km; 15 mi) into the atmosphere and deposited ash in 11 U.S. states and two Canadian provinces. At the same time, snow, ice and several entire glaciers on the volcano melted, forming a series of large lahars (volcanic mudslides) that reached as far as the Columbia River, nearly 50 miles (80 km) to the southwest. Steam and water flowed out from inside the earth.

57 people died in the blast and aftermath of the destruction.

THE ENTIRE SIDE OF THE MOUNTAIN WAS BLOWN OFF. Equivalent to 24 Megatons of TNT. or 27,000 Nuclear bombs simultaneously exploding.

CANYONS FORMING IN A SINGLE WEEK

On March 19, 1982 spirit lake dam broke causing mud flows that formed a new canyon: the North fork of the Toutle river.

Westward view looking down the North Fork of the Toutle River in August 1984. The rockslide and pumice deposited in the region of the headwaters of the river have been eroded to a depth of more than 100 feet forming a new dendritic drainage pattern.

Twenty-five foot thickness of stratified pyroclastic flow deposit which accumulated in less than one day on June 12, 1980. The stratified flow deposit forms the floor of the pit in Figure 1 which was later eroded by mudflows to make the cliff exposure here.

NO ORDINARY FLOOD: RAPID LAYER FORMATIONS COVERING HUNDREDS OF MILES

These flood waters covered the world in massive tsunami waves that have never been seen before or since. The layers left behind covered hundreds of miles, nearly entire countries in some instances. The Morrison formation, for example, touches 7 states: Utah, Nevada, Arizona, Colorado, Montana, Idaho, Wyoming and arguably reaches into Canada.

We see the uniform layers lined out smooth and even. This was not a long term process.

Randall Carlson Studied the magnitude of this flood and found boulders the size of a house moved by the flood waters.

FLOOD FORMATIONS

Trees petrified and upright, polystrate fossils, show the rapid nature of the layers. NO tree would stand erect for millions of years without eroding while layers slowly form

Layers were laid down quickly within only weeks or months.
THE GRAND CANYON: The lack of biological activity between horizontally deposited sedimentary strata and flat gaps between missing strata (paraconformities) indicates rapid deposition. This biological activity in the subsurface, known as bioturbation, includes the burrows created by small organisms such as worms, insects, marine animals, and other small animals.

This sand art toy we play with at home displays how different colored layers can be deposited quickly and still show layers that don't represent millions of years. Our sand toy settles down layers in around 5 minutes. This is observable science.

We learn from Mount St Helen's Spirit Lake how these formed from floating and bogged down logs. However this Universal flood would have been 200X the scale of that event.

FLOOD LEGENDS

There are also many legends derived from cultures around the world speaking of a flood: While there are over a dozen we will only name a few: These clearly link back to the real event. Why else would people pass on legends across the globe? Remember, we are aligning history, with science, scriptures, and archaeology and they make a straight line to God as the creator, lawgiver, and judge of the earth.

CENTRAL AMERICA | The Aztecs believed that only Coxcox and his wife, Xochiquetzal, survived the flood. They took refuge in the hollow trunk of a cypress -or, in some versions, a small boat - which floated on top of the water and finally banked on a mountain in Culhuacan.

HAWAII | Nu'u was a man who built an ark with which he escaped a Great Flood. He landed his vessel on top of Mauna Kea on the Big Island. Nu'u mistakenly attributed his safety to the moon, and made sacrifices to it.

THAILAND | The first man and woman created by the supreme god, Phu Ruthua. A thousand years passed, their descendants were wicked and crude as well as not interested in worshiping the supreme god. The god got angry and punished them with a great flood. Fortunately, some descendants survived because they fled into an enormous magical gourd

SUMARIA | The gods have decided to send a flood to destroy humanity. Enki, god of the underworld sea of fresh water and equivalent of Babylonian Ea, warns Ziusudra, the ruler of Shuruppak, to build a large boat, though the directions for the boat are also lost.
When the tablet resumes, it describes the flood. A terrible storm rages for seven days and nights. "The huge boat had been tossed about on the great waters." Then Utu (Sun) appears and Ziusudra opens a window, prostrates himself, and sacrifices an ox and a sheep.

GREECE | Deucalion and the Great Flood Zeus, in his fury, decided to punish humanity for Prometheus' actions. He planned to unleash a massive flood upon the Earth to eradicate all life. The flood was meant to be a cleansing and a lesson for humanity

CHINA | Yu the Great who founded the Xia Dynasty, the country's first. According to legend, the region had been plagued by floods for decades, and Yu rose to prominence for taming them. Little sign of these floods had been found until recently, when a team of researchers reported evidence of a massive deluge of the Yellow River around 4,000 years ago.

CREE NATIVE AMERICANS | Many centuries ago a great flood covered the earth, destroying all the nations. At that time, all of the tribes of the Coteau des Prairies climbed up the Coteau, a ridge emerging out of the prairie, in order to escape the rising waters. After the tribes had gathered, the water rose to cover them all, turning their bodies into a mass of red pipestone rock. From that day on, the Coteau has been considered neutral ground to all the tribes, and there they could meet in safety to smoke the peace pipe.

Today there is evidence of massive subterranean oceans beneath the earth's crust.

The finding, published in Science, suggests that a reservoir of water is hidden in the Earth's mantle, more than 400 miles below the surface. All this water, three times the volume of water on the surface, is trapped inside rocks. The finding is based on seismic measurements.

The Universal model has been researching and teaching this for a long time now. They also show where the fountains of the deep erupted. Again we don't have space to cover it all here in this brief overview. ***See universalmodel.com***

NOAH'S ARK: Myth or Reality?

"Noah's ark seems merely like a fun child's story." Some would say. How could he fit all the animals on the ark? They ask "Are you stupid, don't you know there are millions of species?"

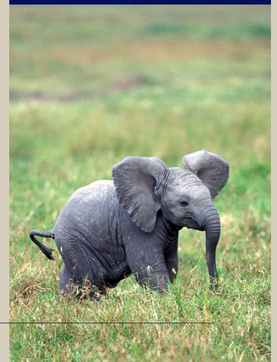

Others echo, "Wasn't it just a local flood? There is no way to cover the entire earth with water."

Let's first respond to fitting all the animals on the ark. Recent studies estimate the total number of living and extinct 'kinds' of land animals and flying creatures to be 1,398. With our "worst-case" scenario approach to calculating the number of animals on the Ark, this would mean that Noah cared for 6,744 animals. Babies.
learn more at the QR code link.

Learn more about how it could have been done with this video.

Noah was 600 years old! He was smart! He could have taken baby animals. They are smaller, they eat less and leave less waste. They also have longer breeding life after the flood. Most importantly God was helping him. Nothing is impossible with God. *"I can do all things through Christ who strengtheneth me."* Philippians 4:13

There is also evidence the flood was in spring since petrified plants were budding and pinecones were closed, therefore there would have been eggs and

Baby animals are more easily fed, cleaned, and have a longer breeding life.

NO doubt it was a massive feat! To build and load the ark. He might have hired locals for help. They might have worked for pay even though they didn't want to come along for a ride. There are many ways he could have done it but are we to doubt what God can do? He can part the red sea. He can raise the dead. He can do all things.

There was no need to put millions of species on the ark. Was there a Shitzu Poodle on the ark?
NO, because it didn't exist at the time.

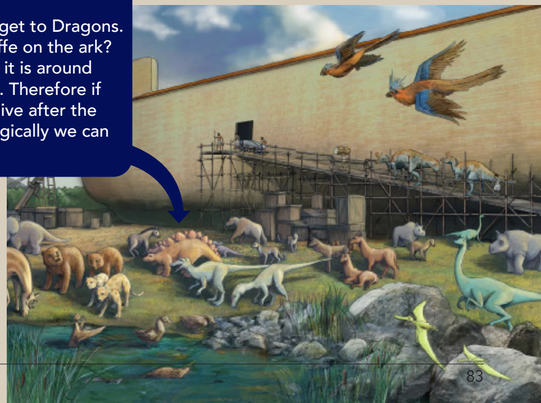

There are nearly 200 new variations within the Dog kind in the last 150 years. All domestic dog breeds are able to interbreed to give birth to reproductively viable offspring. This is because their genomes remain relatively unchanged, despite their physical characteristics appearing so different. This is what is meant by reproducing after their kind. All domestic dog breeds are able to interbreed to give birth to reproductively viable offspring. (https://www.sciencefocus.com/nature/are-any-dog-breeds-close-to-becoming-a-new-species)

ARE DINOSAURS ON THE ARK?

We will cover that when we get to Dragons. Sneak preview... Was a giraffe on the ark? How do you know? Because it is around today and survived the flood. Therefore if dinosaurs or dragons were alive after the flood and they can't swim, logically we can say they were on the ark.

AREN'T DOGS CHANGING INTO NEW BREEDS EVOLUTION? YES AND NO.
A short definition of terms is that microevolution can be observed. While I prefer to call this varitiation and differentiation. The animal's genome never changes beyond the kind, and speciation does not occur. It is only modified within the genetic framework given by the creator. For example, a horse and a donkey mate and create a mule. A seemingly new kind of animal. however this animal is now sterile and cannot breed.

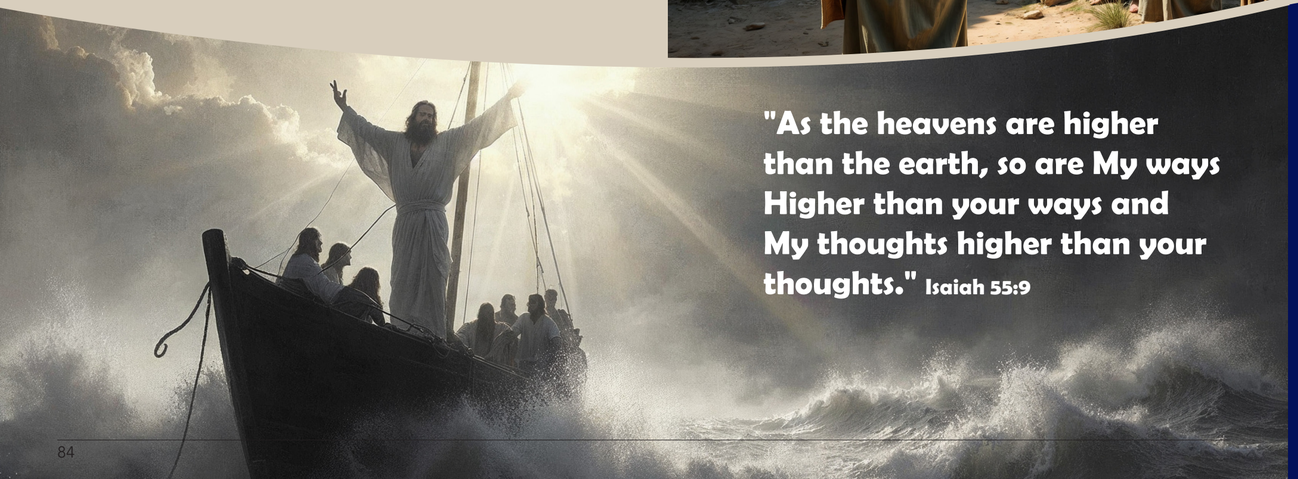

SCIENCE IS LIMITED

Can science explain how Jesus walked on water, how he raised Lazarus from the dead, fed 5,000 with a few loaves and fishes, or how he calmed the stormy sea?

The short answer is NO.

Miracles will not always be explainable on this earth. But we need not explain away the scriptures just because we can't explain them in naturalistic terms. While there could be a scientific principle that Christ used to walk on water yet to be discovered. It is more important to develop spiritual gifts rather than knowing how it is done.

"As the heavens are higher than the earth, so are My ways Higher than your ways and My thoughts higher than your thoughts." Isaiah 55:9

God may work with natural laws to create. While I don't know all things, I know that God is higher than all natural laws. It is important that we don't put God's power in a box or make him small and put him where science is not.
Some are trying to say "don't have a God of the gaps." With hopefully good intentions professors hope to help those that find an answer to questions previously unanswered with science so they won't lose their faith in God when science supposedly takes his place. However we will demonstrate later that any TRUE scientific discovery will bring greater faith in God. For example the cell is a magnificent factory that works with precision. If any part of the cell is missing it won't work, called irreducible complexity. The deeper we go into true science the bigger God becomes. If we are worried people will lose their faith in God it is probably based in bad science or theories of men paraded as science.

I worry that those who don't want to mix God and science are trying to separate the two so that we don't see the error through scriptures. It essentially takes out the accountability. The same thought seems to also be saying that genesis is poetic and not literal and that Adam and eve were mythical as well as the flood being a local flood or complete myth altogether. We are demonstrating science that coincides with the scriptures.

I would ask a scientist. Can you support your science with 8 or 10 scriptures from the holy writ? If not are you cherry picking a few choice quotes to fit your belief system. We can all find something to fit.

Don't put God in a bottle. Don't limit his powers in your mind or it could handicap your connection and appreciation for him and hinder your grouth through faith. Allow god to be in all the gaps in your life. Let him fill your heart and your life. Don't be agnostic but be believing! *"Be not faithless, but be believing"* (John 20:27)

Which scriptures back the idea to "*not let god be in the gaps?*"
Where is the faith of man? I see people relying on science more than on God.

"*...and I brought him to the disciples, and they could not cure him. Then Jesus answered and said, "O faithless and perverse generation, How long shall I be with you? how long shall I suffer you?*" (Matt 17:17, Mark 9:19, Luke 9:41, John 20:27)

Using the spirit to make scientific discoveries is wonderful. Most God fearing people have made wonderful discoveries such as Louis Pasteur, Isaac Newton and so many other scientists have been inspired by the Holy Spirit of promise to bring light into their lives.

Evolutionary theory is not one of those. It hinders progress. The blood vessels discovered in dinosaur bones was an accident. and they still oppose the progress made in that area of science as we cover in the chapter on soft tissues in dinosaur bones.

RATHER allow God to guide you. Trust his scriptures and his inspired prophets wherever they may be. Trust his inspiration and let your bias fall aside. Drop the honors of men and allow you to work directly with God without worry of publising, perishing, or pleasing others. When money and careers are involved sometimes we bend our values and truth to fit the world.

Jesus taught us to be a peculiar people and to separate ourselves from the world. My God is a god of miracles. He is greater than any science.

Jesus fed 5,000 men until they were full and satisfied (not including women and children) with a few loaves of bread and fish, and as a testament to this miracle they filled the baskets again after with 12 baskets full. (Matt 14:21)

Later in Matthew 16:8 His disciples forgot the miracle and he called them to repentance. *"O, ye of little faith, why reason ye among yourselves, because ye have brought no bread? Do ye not yet understand, neither remember the five loaves of the five thousand, and how many baskets ye took up?"*

Are we forgetting his power? Are we growing in faith? and relying less on man?

DID THEY FIND THE ARK?

In 1959 while scanning for missile silos near Russia Ilhan Durupinar came across this formation. In 1960, a joint Turkish-American expedition, led by George Vandeman, surveyed a boat-shaped formation near Dogubayazit in eastern Turkey, which was later named the Durupınar site. After blasting holes into the soils no archaeological artifacts were revealed, and they determined it was a very odd geological formation, not the remains of Noah's Ark.

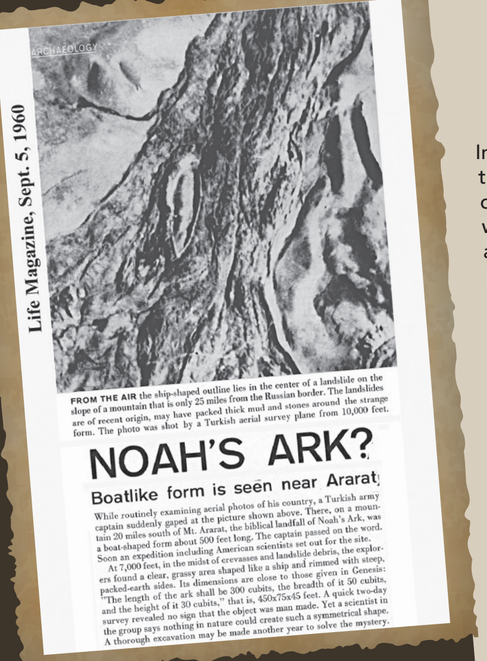

Interest in the site was renewed by Ron Wyatt, who visited the site in 1977, 1979, and 1984. The Life magazine story on the blast caught his interest. RON WYATT Dug DEEPER in the 1980s He read the scripture saying it rested "ON THE MOUNTAINS OF ARARAT." He prayed with friends for an earthquake in order to better reveal the formation. In 1987 there was an earthquake. He then planned a trip to return to the site.

Many dismissed the site because it was too long. They were looking for a 437 foot ark (based on the Hebrew cubit) this object was about 515 feet.

The Royal Egyptian cubit was 20.62" meaning the ark as described in the bible at 300 cubits would be 515 feet.

When they measured the object they measured it at exactly 515 feet. The same as the measurement with a royal Egyptian cubit.

They used metal detectors and while marking the metal found, marked lines down the entire length of the object. The image shows the long lines like that of a boat. They also found some metal with Jim Irwin, a former astronaut present. (https://youtube/IoTkguzRaCU?si=Q3nbvy4Hne_o9tVX)

The Royal Egyptian cubit

They also found some metal with Jim Irwin, a former astronaut, present. It was sent to Los Alamos labrotories and was tested by John Baumgartner. The metal was a mix of alloys like aluminim, not found in nature. Dr Baumgartner asked if they had found this in a rocket site that crashed on the mountian. This brought Dr Baumgartner and David Fasold a marine salvage expert onto the team. They late did deep marine scans on the site as well.

LEARN MORE

Down in the valley there were stones all over thought to be used in the stabilization of a ship. As many as 15 of these massive stones were found. They were thought to have been cut loose when the boat came to a stop, dropping them in the valley below. These stones have been tested by creation scientists, which showed they were instrumental in keeping a boat from tipping in a large storm. Our understanding of the flood geology shows it would have been 100s of times larger than any catastrophe known by modern man releasing tsunamis. (See page 76-79 explaining flood geology) It would have been a rough and wild ride! The giraffes seem to agree it was not a fun cruise!

The drogue stones and a stele monument that show a picture of a boat and 8 people added to the confidence of the amatuer archaelogists that this was the location.

Kent Hovind was once asked in an email *"Are you stupid, those stones would slow him down."* Kent responded *"Where was he going?"* As we know Noah was only floating out the storm.

About 15 miles from the site is the city of Arzep which means "The city of eight." when translated into English.

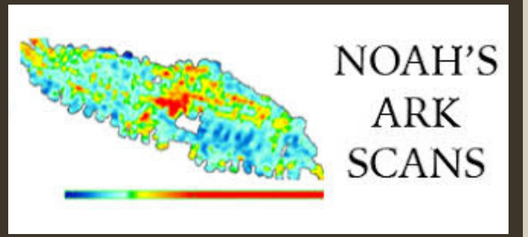

DROGUE OR ANCHOR STONES WERE FOUND IN THE VALLEY BELOW. Near the city of, arzap, these were used anciently to stabilize boats.

About 15 miles from the ark is the village of Arzep, formerly known as the Village of Eight, where the sea anchor stones were cut off the ark and landed underwater in this area.

https://www.arkdiscovery.com/noahsarkstones.htm

The site was dedicated in 1987, but others still look for another ark higher on Ararat. In 2017 the visitors center was renovated to better accommodate guests. There is more research to be done as well. In 2019 Andrew Jones, an American living in Turkey, worked with Topo 3D to bring out newer technology and do additional scans on the site. (see image of one such scan) Science channel did a documentary in 2022 called "forbidden history" on this Durupinar site in eastern Turkey. While I am only 83% sure this is the location, it is great to see evidence confirming faith.

On June 20, 1987, Turkish officials dedicated the site for the official location of Noah's ark! Road signs now point us to the location.

If they found Noah's ark that has implications for those who dispute the accuracy of the Bible. The validity of the ark supports the idea of a global flood, as described in Genesis. it could suggest that parts of the Bible previously seen as myth might have historical roots. Then the reality of Jesus Christ as creator of the world and our saviour would also be an accurate scriptural account and become relevant. The result is that many might have to change their lifestyle. That would challenge many current scientific understandings of geology, archaeology, and history potentially ruling out evolution theory. If a literal Noah's Ark were found and verified it would change many lives, some would need to change lifestyle, and change is hard. Are there other reasons why people resist the truth and the information? Do they want to live in ignorant bliss?

CHINESE WORD FOR BOAT ISN'T THE WORD DINOSAUR IN THE SCRIPTURES?

Figure 3. "Boat."

Figure 4. "Flood."

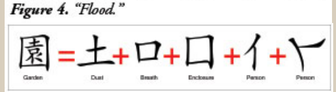

Figure 2. "Garden."

Ancient Chinese pictographs are silent witnesses, like fingerprints, of historical events reported in Genesis. In particular, the details of these word-symbols are clues that point to how the earliest Chinese must have known basic facts of Genesis 1–11 at the very time their pictographs were invented.

Chinese is not an alphabet-based language—its word characters are both abbreviations of and combinations of picture symbols.1 The simplest symbols are combined to construct composite symbols that denote compound words. (See figure 1 & 2) However, the actual pictures that were chosen, and especially their associated meanings, are what give us an amazing insight into Chinese history. The pictographic clues to that mysterious past have remained hidden in plain view for thousands of years.

Additionally, the pictographic characters for "boat" and "flood" recall information recounted in the adventures of Noah and his Ark–borne family, as recorded in Genesis 6–9. These Chinese characters recall that there were exactly eight survivors of the worldwide Flood. see figure 3, 4

Recollection of the Garden of Eden is also evident in the ancient Chinese word for "garden." If this does not link to the Genesis account, why else would the early Chinese combine the ideas of "two persons" who received the "breath" of life after the first one of those two persons (Adam) was made from the "dust" of the earth?

WHY ISN'T THE WORD DINOSAUR IN THE SCRIPTURES?

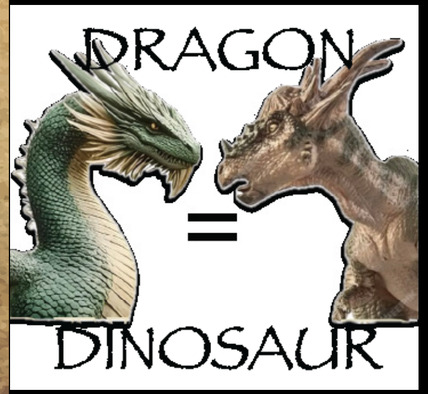

"And for that matter" you ask "why did you take so long to finally bring this up in the book?" I'm sorry there is a lot to cover to connect the dots. You see there is a prevailing belief and paradigm in the mind of many and it takes a fair amount of evidence to sway the entrenched believer.

Just as computer and satellite are modern words. They are also not in scripture.

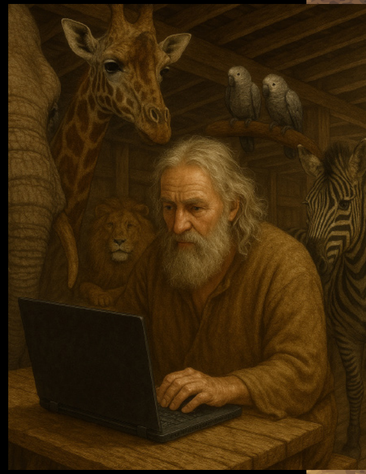

The **WORD DINOSAUR WASN'T COINED UNTIL 1841** by Sir Richard Owen. Thus any animals of this type could very well have been classified as a type of **DRAGON**.

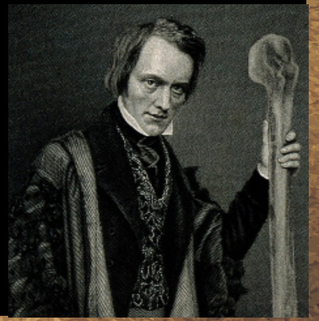

They would have been called Dragons. While the modern paradigm that dragons are purely myth-similar to fairies and mermaids - we maintain that there is substantial evidence showing dragons lived with man and were in fact dinosaurs. We have a logical explanation for unicorns in the Bible as well. We only have space to say

Noah did not know what a laptop or cell phone was just as he had never heard of a dinosaur. He surely had heard of a dragon. They decided to change things up in the last 2 centuries and throw us a spiritual curve ball by distorting history and hiding the truth.

We are sure they were the same animal. Therefore we are putting it on a shirt to make it official!

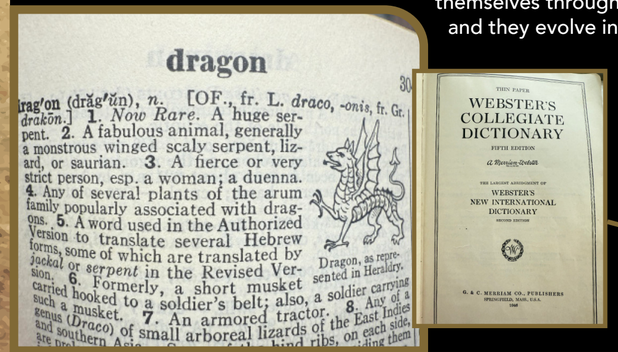

This handsome lad is not Count Dracula, this is Sir Richard Owen, Naturalist acclaimed for coining the term "terrible Lizard" Dino-saur in 1841

Webster's Collegiate Dictionary from 1946 under the topic of dragon says "NOW RARE" (caps added for emphasis. Many people are shocked when they see this revelation just like I am astonished here. (figure 94c.)

When I discovered this I had quite the reaction. (fig 94c.) It was a surreal feeling and then fear, and then incredulous, and then shock, and then a little terror. Could dragons have been real and are now only rare. My emotional reaction was visceral with panic, dread, anxiety. After all it is hard to receive new information. Mark Twain said *"It's easier to fool people than to convince them that they have been fooled."*

Now my interest level got so high I bought 4 more dictionaries to see if it was correct, AND SURE ENOUGH, they all say the same thing. "1. NOW RARE." who would have thought it would be so recent. How could so many dragon legends pervade our society for hundreds of years from nothing? Out of thin air? Well everyone has a theory.

David Jones Book "**An Instinct for Dragons**" proposes that the dragon myth is a product of human evolution, specifically the inheritance of primal fears. He suggests that these fears, particularly of large cats, raptorial birds, and snakes, became ingrained in the primate psyche and manifest themselves through the DNA of primates and they evolve into humans and out POPS DRAGON MYTHS. Now that is absolute insanity.

dragon

drag'on (drăg'ŭn), *n.* [OF., fr. L. *draco*, *-onis*, fr. Gr. *drakōn*.] **1.** *Now Rare.* A huge serpent. **2.** A fabulous animal, generally a monstrous winged scaly serpent, lizard, or saurian. **3.** A fierce or very strict person, esp. a woman; a duenna. **4.** Any of several plants of the arum family popularly associated with dragons. **5.** A word used in the Authorized Version to translate several Hebrew forms, some of which are translated by *jackal* or *serpent* in the Revised Version. **6.** Formerly, a short musket carried hooked to a soldier's belt; also, a soldier carrying such a musket. **7.** An armored tractor. **8.** Any of a genus (*Draco*) of small arboreal lizards of the East Indies and southern Asia

Dragon, as represented in Heraldry.

THIN PAPER

WEBSTER'S COLLEGIATE DICTIONARY

FIFTH EDITION

G. & C. MERRIAM CO., PUBLISHERS SPRINGFIELD, MASS., U.S.A.

94c. This reaction is normal to this new information

95a.

DRAGON LEGENDS pervade ancient and modern culture alike. They had similar reptilian traits across oceans for thousands of years.

Some of their traits were: wings and 2 to 4 legs, with scales, and hiding in caves. Remember, just as there are different species and kinds of dinosaurs there were likewise many kinds of dragons. (fig 95b.) We compare the two animals and conclude they were the same animal.

95b. There were many kind of dragons, just as there are many types of dinosaurs

As we make the connections between dinosaurs, dragons, flood-fossils, scripture and historical records, we hope the image will become clear to you. This will change a lifelong paradigm for many who have been taught, since children, in museums and books, as I was, that these animals are millions of years old or are myths altogether.

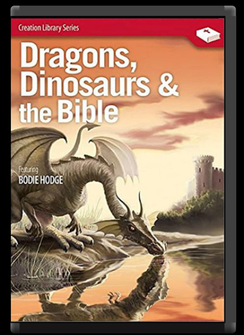

Today the flag of Wales is still a dragon.

When a dragon gets dressed for the day he looks in the mirror to see a dinosaur looking back. Their similarities and comparisons seem to follow logic as we see their many similar traits.

94d. Dragons are depicted all over Europe in statues and artwork. Not because of imaginary animals but real sightings of these rare, mysterious, and reptilian creatures that today seem so mythical.

This is a fabulous documentary to get your hands on teaching about the dinosaur and Dragon similarity

LEARNING FROM LEGEND AND SCIENCE

Scientists dig up bones from the ground and do their very best to piece together the structure, muscle, fat, cartlidge, and skin based on hypothesis and knowledge of anatomy. This is why they have made dinosaurs all types of colors in the past. There is room for the imagination to fill in the blanks. Ancient people drew what they saw and may not have had the art skills or computer aids that we have today. If we put together ancient art and modern reconstructions of bones, I believe we will get a better picture of these animals. For example we are told that dragons lived in caves and would come out to eat and sometimes terrorize towns. This seems consistent with reptilian behaviors, and can teach us about dinosaur behaviors. This combines different disciplines to get closer to the whole truth.

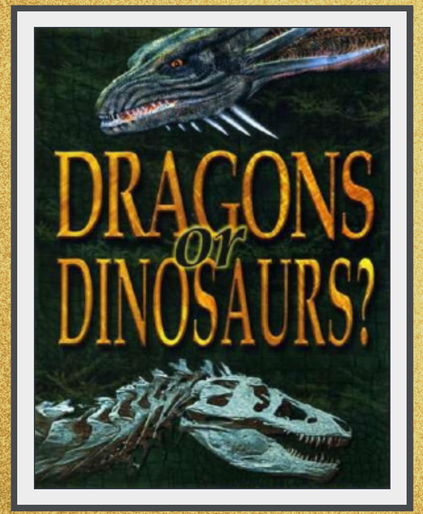

Figure 96a. This dragon documentary is not only a great film, but also says a lot from the cover that their similarity is undeniable.

How would a scientist reconstruct a hippo skull if never observed alive? While we give them immense credit for their effort and work, there just isn't enough information to get a 100% complete picture of what the animal would have looked like.

96b. Elephant skulls can be mistaken.

96c. Would you think hippos were herbivores?

DRAGONS IN HISTORY

Marco polo recorded encouters with Dragons:

Marco Polo lived during the 13th and 14th centuries A.D. He was originally from Venice, but he, his father, and his uncle travelled extensively to the Far East. His book, The Travels of Marco Polo, documents much of his exploration into the regions of China, Persia, Tibet, and Burma (Polo, 1961, preface). Polo spent much of his book detailing the interesting customs of different ethnic groups he encountered. He also focused on the different animals and plants associated with these tribes.

In chapter 49, Polo related items of interest that werefound in a province named Karajan. He reported that large quantities of gold were found in the rivers. He further noted that the citizens used cowrie shells as currency. He then described some of the animals associated with the area. He wrote: "*Here are found snakes and huge serpents, ten paces in length and ten spans in girth [that is, 50 feet long and 100 inches in girth]. At the fore part, near the head, they have two short legs, each with three claws, as well as eyes larger than a loaf and very glaring. The jaws are wide enough to swallow a man, the teeth are large and sharp, and their whole appearance is so formidable that neither man, nor any kind of animal can approach them without terror. Others are of smaller size, being eight, six, or five paces long*" (1961, pp. 158-159)..

Polo continued his chapter by explaining how the local citizens of the area hunted and killed the creatures. He noted that the creatures were nocturnal (assisted by "eyes larger than a loaf"), dwelling in "caverns" during the day to avoid the heat. After the creatures killed their prey, Polo wrote that they would find a water source such as a lake, spring, or river. The serpents' massive bodies left "deep impressions" in their paths "as if a heavy beam had been drawn along the sands" (p. 159). The creatures followed these same rutted paths regularly. Since their route was predictable, the natives buried large "wooden stakes tipped with sharp iron spikes, which they cover with sand" (p. 159). Polo reported that these spikes so severely wounded the creatures that they died quickly.

The book Zuozhuan tells the narrative of how the *"ancients raised dragons and how the state used the services of two clans known as the Dragon Rearers and the Dragon Tamers."* (Sterckx, R., The Animal and the Daemon in Early China, 2012, p. 52.)

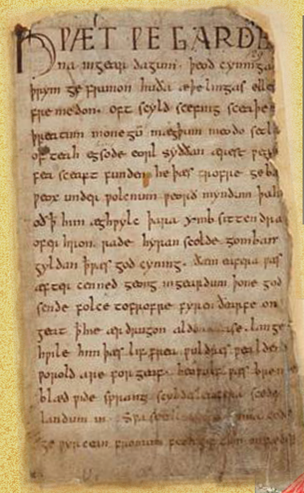

Ancient maps displayed in latin ***"hic sunt dracones"*** As western pioneers colonized tribal lands around the world, reports of dragons continued to come back to Europe. It became standard practice for cartographers to identify the unexplored regions at the periphery of their maps with the cryptic words: ***"Here be dragons!"***

DRAGONS IN HISTORY

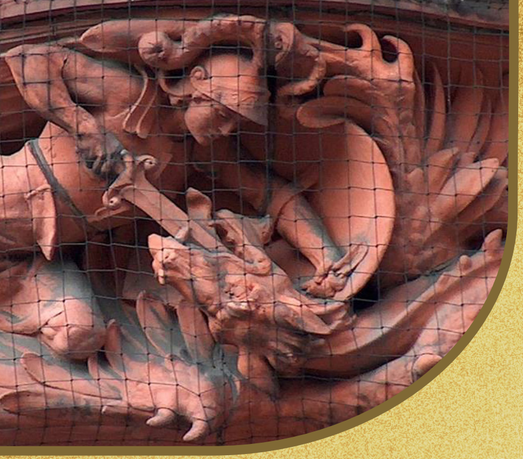

The great Swiss naturalist and medical doctor Konrad Gesner published a four-volume encyclopedia from 1516-1565 entitled Historiae Animalium. He mentioned dragons as *"very rare but still living creatures"* (p. 224). The story is told of a tenth century Irishman who encountered **a large clawed beast having "iron on its tail which pointed backwards."** It had a head similar to a horse. It also had thick legs and strong claws. **Could this have been a surviving Stegosaurus?** (Ham, K., The Great Dinosaur Mystery Solved, 1999, p.33.)

Here we see the poem of Beowulf written in Old English. Nothing like our English today, is it?

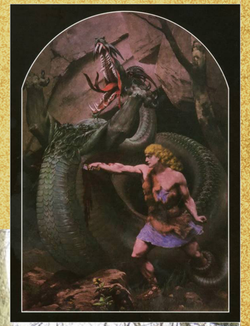

Famous in the annals of British literature is the poem of Beowulf, the heroic Norse warrior who killed multiple dragons. In the end he died in the process of vanquishing a winged dragon.

DRAGONS IN HISTORY:
ST GEORGE, FAFNIR, AND BEOWULF

A dragon was terrorizing Siline in Libya, The king's daughter was chosen as the next sacrifice, but Saint George saved her by killing the dragon with a lance. The king was grateful and offered George treasures, but George gave them to the poor instead. Today he has dozens of statues and monuments in honor.

We have endless pages of dragon stories and legends. This book is not long enough to hold them all but a few include:

Fafnir of Sweden who slayed the Dragon

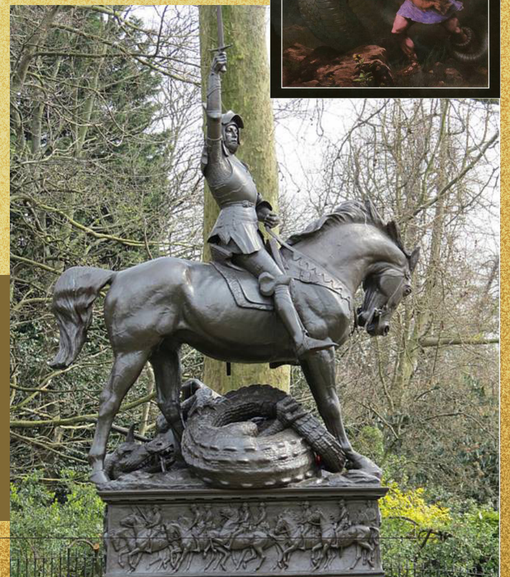

Skuba, A cobbler, killed Wawel the dragon in Krakow Poland

Tristan of Ireland who slayed the dragon to save the princess Ysuet.

Merlin's life was saved because he predicted 2 dragons lived under the new castle plot. They fought and one dragon escaped.

This picture of St George fighting the dragon always intrigued me. If it stood up and if we removed the wings it would look so much like a theropod, such as a raptor or juvenile allosaurus.

DRAGONS IN HISTORY CONTINUED

The Wawel Dragon was a beast which lived in a den under Wawel Hill and terrorised all the inhabitants of King Krak's town. They had to feed the monster by giving him offerings of cattle, while other tales speak of that demon eating nothing but virgins.

No knight could vanquish the monster, until a young shoemaker Skuba outsmarted the Dragon. He stuffed a ram's hide with sulphur and pitch, and put the doctored ram in front of the Dragon's Den. The monster caught the bait and devoured the ram. Immediately, he felt a bad pain and burning in the throat. To quench his thirst, the Dragon started to drink from the Vistula River. However, as water cannot extinguish burning sulphur, the gases produced by the fires inside him made the beast explode.

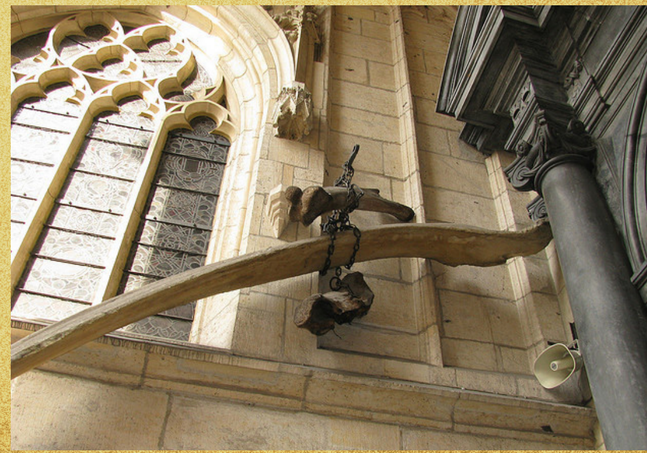

100b. Wawel dragon statue breathes fire today in Krakow poland

All the townsfolk revelled in the news and the heroic shoemaker was properly rewarded. To commemorate the vanquishing of the Dragon, Bronisław Chromy designed a sculpture of the beast which now stands by the river at the foot of Wawel, near the Dragon's Den.

Poland's Wawel Cathedral holds a few bone remains of the dragon hanging next to the cathedral's entrance. Smok Wawelski—the Wawel dragon. They are chained together in a random jumble, hanging high above the main doors. (Fig 100a.)

Now why would they name this dragon and all previous dragons if they were mere myth? And why would they have a dragon bone hanging if it were not from a dragon they killed? And why would they have a dragon statue of a mythical animal? Probably because it really happened. I trust their history. I trust the evidence.

100a. Wawel Cathedral, Krakow, Poland holds dragon bones above entrance

Some French chateaus built near the close of the Middle Ages and early 1500's display dragon illustrations carved into their walls, ceilings, and furniture, these include Château de Chambord, Château de Blois, and Château Azay-le-Rideau. Dragons, Dragons they never end. I could put hundreds of images here:

Dragons appear in the mythologies of many cultures worldwide, including Chinese, European, Norse, Mesoamerican, and others.

DANIEL KILLS A DRAGON

A less known story is Daniel killing the Dragon, Bel. The apocrypha is not in the standard works of the Church but revelation says in D&C 91:5, "*whoso is enlightened by the spirit shall obtain benefit therefrom;*"

102a. Daniel feeding the dragon pitch.

Daniel, with the king's permission, kills the dragon, which the Babylonians considered a god. Daniel demonstrates that the priests of Bel are secretly eating the offerings meant for the idol, exposing their fraud.

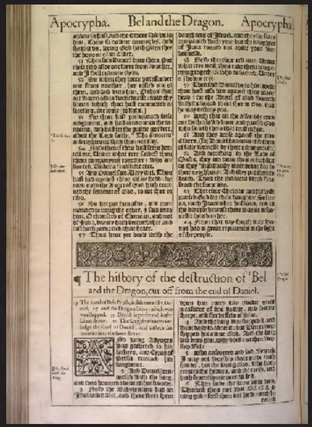

According to the brief companion narrative of the dragon (Daniel 14:23–30), "*there was a great dragon which the Babylonians revered*". Some time after the temple's condemnation the Babylonians worship the dragon. The king says that, unlike Bel, the dragon is a clear example of a live animal. Daniel promises to slay the dragon without the aid of a sword, and does so by baking pitch, fat, and hair to make cakes that cause the dragon to burst open upon consumption.

In other variants, other ingredients serve the purpose: in a form known to the Midrash, straw was fed in which nails were hidden, or skins of camels were filled with hot coals.

BEL ENCOUNTERING THE DRAGON; FROM BABYLONIAN CYLINDER.

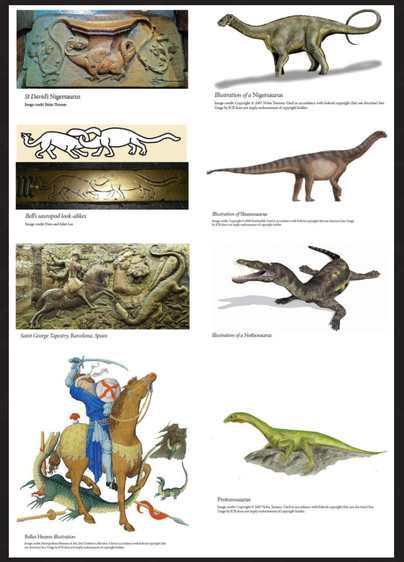

102a Daniel's story recorded on Babylonian artifact

Apocrypha. Bel and the Dragon. Apocrypha

The hiſtory of the deſtruction of Bel and the Dragon, cut off from the end of Daniel.

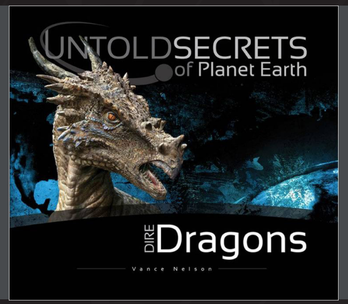

102b. The apocrypha is not included in the Bible or standard works but can be used by the spirit. Here it shows the account of Daniel killing the Dragon

This is a rendering aiming to display side by side comparison of the dinosaur to the dragon it might have represented. Based on the eyewitness at the time and matching it with the bones found and reconstructed by modern day paleontologists.

This Dracorex Hogwartsia has a striking resemblance to a Dragon. This skull was recovered in Montana and is on display at the Museum of the Rockies.

This author, Vance Nelson, compares the dragon legends with what kind of dinosaur might have been represented with the ancient drawings and depictions. This best seller has inspired many readers.

A decaying dragon is shown on p. 817 of Dr. Francisco Hernández' landmark book Rerum Medicarum Novae Hispaniae Thesaurus (published in 1651)

A dragon was said to live in the wetlands near Rome in December of 1691. This creature inhabited a cave and supposedly terrorized the local population. The dragon was killed and mounted and a sketch (left) of the skeleton survived in the possession of Ingegniero Cornelio Meyer. (Cornelis Janszoon Meijer) who was a Dutch hydraulic engineer whose expertise was also frequently used abroad. He claimed to have seen the animal and found the carcass.

A most remarkable thing about this animal is the clear head crest and the dual piece of skin from the crest. Five digits are clearly visible for each foot

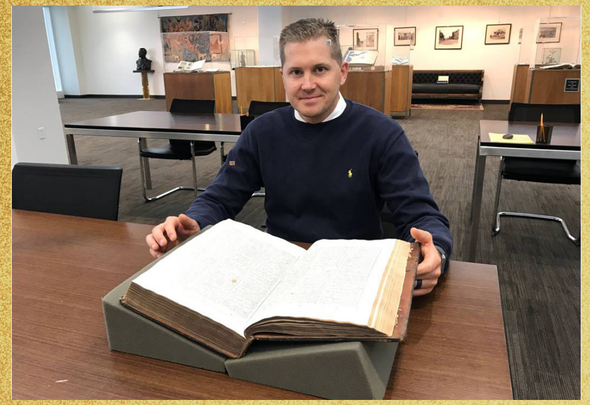

In 1691, Cornelius Meyer "discovered" a dragon skeleton while excavating for a dike in the vicinity of Rome. The dragon had apparently plagued the landscape, being blamed as the cause for much of the flooding that Rome was experiencing. The dragon was assumed to have been killed in 1660, however there was debate about the issue, and the dragon was re-assumed to be alive.
The locals were skeptical of pissing off the dragon by constructing the dikes, so the dragon needed to be dealt with first.

In order to allay the fears of the local populace, Cornelius Meyer went out to "take care of" the dragon, which he so conveniently produced the body of for public display. The image above is an illustration of the skeleton that was put on display with the caption "Drago come si ritrova nelle mani dell' Ingegniero Cornelio Meyer" ("Dragon as it was recovered in the hands of the engineer Cornelius Meyer").

AGAIN...
I HAD TO SEE FOR MYSELF

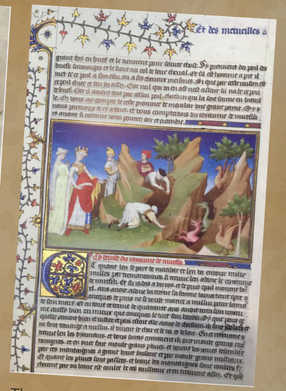

My skepticism took over and I had to see, feel, touch. If this is true, I thought, it has major implications; so I better be sure. So, I went to the oldest library I could find at the University of Utah. They had me wash my hands and then they placed the ancient Bestiary on foam wedges for me to view.
A Bestiary is "a compendium of beasts" or animals of that time. I was told to turn pages very carefully. Written in Greek or Latin, I couldn't read a thing but the images are worth more than the words.

There seems to be different kinds depicted here: some with wings, some with 2 legs and others with 4

Left: This next image seems to depict a dragon eating a cow. Above: an elephant being devoured by a serpent or dragon of some kind.

These people are feeding dragon like creatures in the caves. Possibly to keep them at bay.

Closer up. these seem like dragons and maybe the cockatrice mentioned in the bible. Some have wings others don't, some 4 legs and others 2.

DRAGONS IN THE BOOK OF MORMON

The Nephites fight for a righteous cause.

The people of Limhi began to drive the Lamanites before them; yet they were not half so numerous as the Lamanites. But they fought for their lives, and for their wives, and for their children; therefore they exerted themselves and like dragons did they fight.

This time the Lamanites fight, led by wicked Zarahemna.

Yea, they did fight like dragons, and many of the Nephites were slain by their hands, yea, for they did smite in two many of their head-plates, and they did pierce many of their breastplates, and they did smite off many of their arms; and thus the Lamanites did smite in their fierce anger.
Alma 43:44

Now that we have established dragons were real animals. Doesn't that bring more credibility to the Book of Mormon referencing these mysterious animals twice in the inspired text?! We believe it is *"the most correct of any book on earth,"* as stated in the introduction. Therefore, let's believe what it says.

HOW DID THEY KNOW WHAT DRAGONS FOUGHT LIKE?

Was it because they saw alligators or snakes as some suggest? An alligator is not ferocious to me. They lay out in the sun and easily scare. They are ambush predators. This paradigm comes from a lack of understanding of dinosaurs and the big picture of the flood and creation.

Alligators do not seem like warriors to me

Why didn't they suggest a lion, bear, or leopard? I think dragons were much more ferocious.

From an ancient bestiary. Ancient literature and sculptures of dragons match the scriptures. This lends credibility and credence to the veracity of the Book of Mormon and other ancient writings.

A dinosaur / dragon in the Manti, Utah Temple

In 2024 the Manti temple had an open house for the public to come see. Several hundred thousand came through in 2 weeks.

In the creation room are depictions of on necked animals in the water and a pterosaur-like animal flying with no feathers. My guesser is broken on the other two down by the plesiosaur looking animal.

This is the oldest mural in any of the temples for the Church of Jesus Christ of Latter Days Saints. This mural was painted by Carl Christian Anton Christensen. He was a member who immigrated to Utah in 1857 and painted the mural in the 1880s.

DINOSAURS ON THE ARK...?

If dragons... Also known as dinosaurs were alive after the flood and were not water-dwelling animals, they would have to have been on the ark. I often ask this to people who wonder: "How do we know if a Giraffe was on the ark or not?" It is because they are around today and they survived the flood. The same goes for dragons. We are taught that "ALL flesh died that moved upon the earth, both of fowl, and of cattle, and of beast, and of every creeping thing that creepeth upon the earth, and every man: 22. All in whose nostrils was the breath of life, of all that was in the dry land, died. This is clear and specific. If it wasn't on the ark it died.

ADDRESSING THE SKEPTICS

Q: Dinosaurs were too dangerous and would eat everyone:
A: Remember, Jurassic park is a Hollywood action film and what do Hollywood do to films do best? Dramatize, embellish, exaggerate, and sensationalize. Lions and bears were on the ark and they didn't eat Noah. I've seen some pretty scary movies about lions eating man.

Q: Dinosaurs were too big:
A: The big ones were big, but they are now buried in the mud as fossils. The average dinosaur was about the size of a dog. They were not all large. Look at their eggs. All of them are smaller than an ostrich egg.
We can get into the theory of why they were so large in the antediluvian world. But for now I will just say, higher oxygen content, longer life span like Noah and Methuselah, and no rainbows before the flood. So there were some changes that took place. Dinosaurs were too big: The big ones were big but they are now buried in the mud as fossils. The average dinosaur was about the size of a dog. They were not all large. Look at their eggs. All of them are smaller than an ostrich egg. We can get into the theory of why they were so large in the antediluvian world. But for now i will just say. Higher oxygen content, longer life span like Noah and Methuselah, and no rainbows before the flood. So there were some changes that took.

WHAT HAPPENED TO THE DRAGONS?

REASONS THEY ARE SO RARE:

Dragons became pests. They were eating their sheep and princesses.

Dragon slayers became heroes.

There was no endangered species list. It was kill on sight.

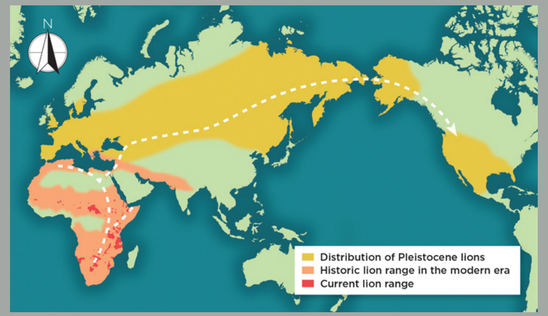

They might not have adjusted to the post flood climate.

Similar to how animals today go extinct. Did you know lions used to live wild in England, France, Germany, and China? Lions habitat loss shown below.

In the last 500 years we have seen the extinction of 784 species including 338 vertebrates, 359 invertebrates, and 87 plants in the last 500 years.

Dragons could have been trophies.
Ancient people used dragon blood and other parts in recipes.

Lions were, at one time, living and thriving in Greece and up as far as England, Germany, and and modern day Turkey. See the documented decline. Dragons could have had a similar decline.

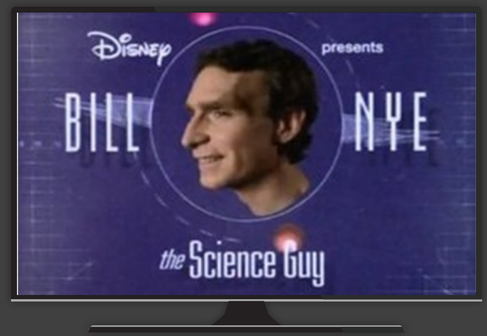

INDOCTRINATING THE KIDS

If you missed the page where we covered the type of evolution we are disputing; the word evolution can be ambiguous, so let's clear this up.

We do not dispute "change within species over time". Everyone sees this.

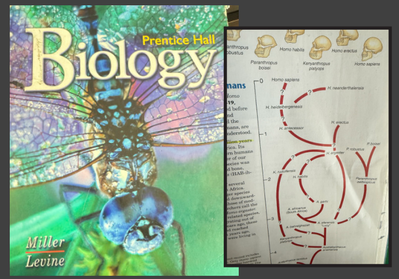

"The common descent of all life on earth from a single ancestor via undirected mutation and natural selection" or DARWINIAN evolution has NOT been proved, verified, or scientifically documented. This type of evolution has serious moral deficiencies. OR MACROEVOLUTION; this is what we are always referring to as the antagonist.

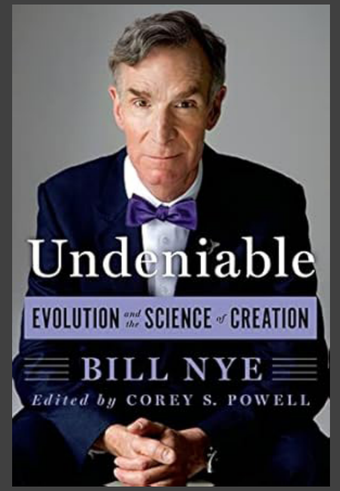

The lack of accountability leaves a vaccum. WIth

Bill Nye the Science guy is a role model for millions of children in schools today. I watched him in middle school growing up at least once a week. He was fun and upbeat. He teaches kids we evolved from apes. He says it is undeniable. See his book. He is a strong advocate of darwinian evolution.

Today on the Netflix series "Bill Nye Saves The World" one episode promotes multiple genders.
He teaches that gender is a spectrum and there are not just 2 genders. Then he continues to rock out to the singer talking about her private parts, sex choices, and other vile and raunchy topics.

Our children get this information in every public school in America. Every single biology textbook.

IS EVOLUTION IS RATED "R"?

What else are science teachers and role models teaching our kids? BILL NYE my science teacher role model is teaching kids lies about gender, sex, and evolution again. **THIS TIME it is rated R**. After teaching gender is a fluid spectrum they rock to the song, **"My Sex Junk.**"

Nye explains that sex, gender, attraction, and expression exist along a spectrum, rather than being limited to just male and female. He uses the term "abacus of sex" to illustrate this point, highlighting that individuals can fall into various categories like intersex, non-binary, or identify with multiple genders.

I debated hard about putting this in here. It was a hard choice to put bad to show how low this can go.

Please don't let kids read this. It is rated R.

"Sometimes, I do a voice for my vagina
Please, don't tell me
I'm the only one who does that

(Chorus)
Cause my sex junk
Is so, oh, oh, oh
Much more than
Either-or, or or

Power bottom or a top off
Versatile love may have
Some butt stuff

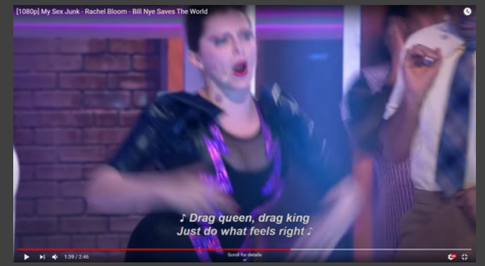

It's evolution, ain't nothing new
There's nothing taboo about a sex stew
Just add salt or Gérard Depardieu
French treasure"

Honestly there is more, but you will have to look online for yourself. I dare not expose more of this in the book. I hope this is eyeopening to see what is taking place and being taught.

She sings "its evolution, nothing new"

SCHOOL IMPLEMENTATION

The battle over evolution being taught in our schools for over a century. The Scopes Trial, also known as the Scopes Monkey Trial, was a highly publicized 1925 legal case that pitted science against religion in the United States. The trial centered on a Tennessee law that prohibited teaching the theory of evolution in public schools. A high school teacher, John T. Scopes, was charged with violating the law after teaching evolution in his class. The trial became a symbol of the broader conflict between fundamentalist and modernist views in American society. Following the trial, other states attempted to enact similar anti-evolution laws, but many were unsuccessful.

Epperson v. Arkansas (1968):
The Supreme Court ruled that the Arkansas law banning the teaching of evolution violated the Establishment Clause of the First Amendment, effectively invalidating similar state laws.

Edwards v. Aguillard (1987):
The Supreme Court further affirmed the separation of church and state in education by ruling that a Louisiana law requiring public schools to teach creationism alongside evolution was unconstitutional.

Mandatory Bible reading and school-sponsored prayer in public schools were banned by the Supreme Court in 1963 with the Abington School District v. Schempp ruling

Since 1987 evolution has almost solely been taught in public schools. Prayer is out of the schools, and the Bible is out. We will look at the effects it is having. We will not have time to discuss in this book the battle that has carried over into

The Church of Jesus Christ of Latter-day Saints, since we live in a world where the Church has to adjust to the constant barrage from the world.

In a later section we will talk about the Colorado Columbine massacre of 1999 and the beliefs that gave birth to these horrors. Here are a few statistics:

In Colorado, the teaching of evolution, including human evolution, was mandated by the 2020 Colorado Academic Standards (CAS) for Science. These standards are based on the Next Generation Science Standards (NGSS) framework, emphasizing evolution as a fundamental concept in biology.

Colorado first formally included evolution as a required component of its public school science curriculum in 1995, with the adoption of the Colorado Model Content Standards; FOUR YEARS before the deadly shooting.

THE SAD TRENDS

Evolution became widely taught in public school biology classes following a series of events in the 1960s and 1970s. The Supreme Court's ruling in Epperson v. Arkansas (1968) struck down state laws banning the teaching of evolution, declaring them unconstitutional. This ruling effectively removed legal barriers that had prevented the inclusion of evolution in school curricula.

Since evolution was allowed in all schools, out of wedlock births increased like crazy, violent crimes increased and also drug use. We see the effects from these numbers but we also know people personally who have struggled with this sort of thing; not to mention the loss of faith and other trials! Kids need fathers!

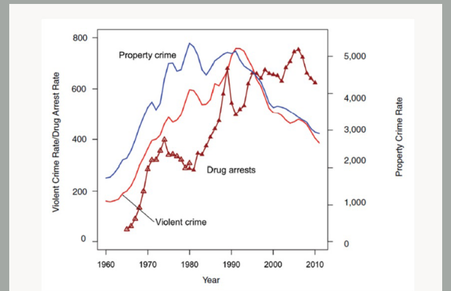

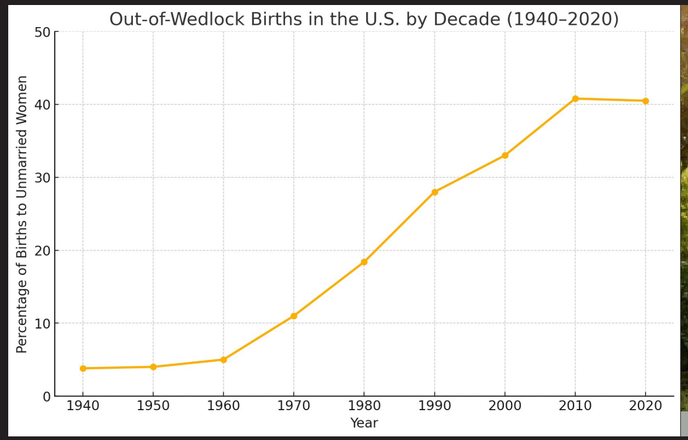

FIGURE 2-6 Violent and property crime rates per 100,000 population, 1960 to 2011, and the drug arrest rate per 100,000, 1980 to 2010.
SOURCES: Uniform Crime Reports. Drug crime rate, 1965–1980; Federal Bureau of Investigation (1993); Maguire (n.d., Table 3.1062.2011, property and violent crime rates); Uniform Crime Reports (drug arrest rates). *https://nap.nationalacademies.org/read/18613/chapter/4#46*

Mandatory Bible reading and school-sponsored prayer in public schools were banned by the Supreme Court in 1963 with the Abington School District v. Schempp ruling.

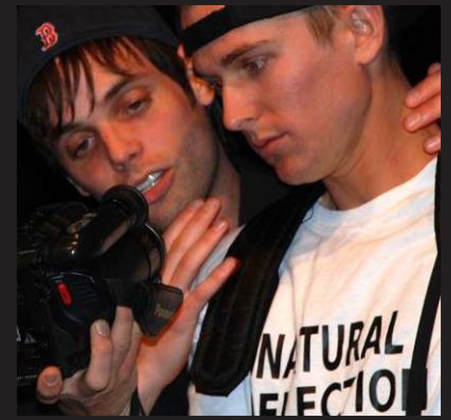

Children deserve to have a mom and dad who love them!

SCHOOL SHOOTINGS

There are so many school shootings now that they almost go unnoticed. Thirty years since evolution has been permanently taught in schools this horrific event happened in 1999. In his journal, school shooter, Harris, mentioned his admiration of what he imagined to be natural selection, and wrote that he would like to put everyone in a super doom game and see to it that the weak die and the strong live. On the day of the massacre, Harris wore a white T-shirt with the words "Natural selection" printed in black.

Peter Langman, Ph.D., wrote an article attached here about Eric's beliefs. *"The day he attacked Columbine High School, Eric wore a shirt that read "Natural Selection."* Eric often wrote and spoke about survival of the fittest and natural selection. In his mind, this meant eliminating "unfit" people from the planet. This desire was similar to what Hitler and the Nazis sought to do."

"Getting rid of all the stupid and weak organisms."
Columbine shooter Eric Harris wrote on his website.

In 2024, President Joe Biden gave a speech to mark the 25th anniversary of the Columbine massacre. In that speech, he said more than 400 school shootings have taken place since Columbine.

History Channel

Teen gunmen kill 13 at Columbine High School | April 20, 1999

At approximately 11:19 a.m., Dylan Klebold, 17, and Eric Harris, 18, dressed in trench coats, began shooting students outside the school before moving inside to...

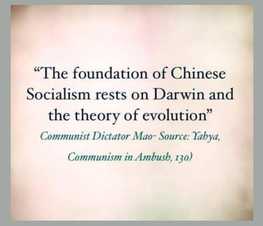

Look at these numbers! We can debate about the reasons but it is clear that prayer, the Bible, and God have been kicked out of our schools. They have been replaced with secularism and evolutionary lies.

Can we fairly blame evolution for this horrible scene of blood and killing? Let's look deeper into the timing. Colorado first formally included evolution as a REQUIRED component of its public school science curriculum in 1995, with the adoption of the Colorado Model Content Standards. These boys would have been taught evolution all through high school and most of middle school prior to this atrocity.

Article detailing the shooter's beliefs

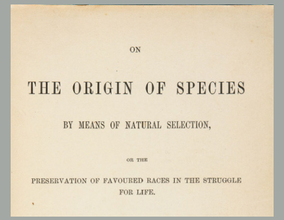

DICTATORSHIP AND CONTROL

BY THEIR FRUITS YE SHALL KNOW THEM. There has been time to see the damage done by evolution and its adopters. Anti-God teachings give control to the governments, because constituents are left to rely on governments when faith disintegrates. This has been demonstrated with communism adopting anti-God ideals such as evolution.

"Victims of the Past, The sin against blood and Race" or "Opfer der Vergangenheit: Die Sünde wider Blut und Rasse" in German, is a Nazi propaganda film made in 1937. This movie was to help bolster public support for the planned T-4 Euthanasia Program for the mentally ill. They are quoted saying "All that is non-viable in nature invariably perishes… we humans have transgressed the laws of natural selection in the last decades. Not only have we supported inferior life-forms, we have encouraged their propagation... Individuals lower than any beast."

Opfer der Vergangenheit (Victims of the Past) was used in order to bolster public support for the planned T-4 Euthanasia Program for the mentally ill, which they called "inferior life-forms,"

ON

THE ORIGIN OF SPECIES

BY MEANS OF NATURAL SELECTION,

OR THE

PRESERVATION OF FAVOURED RACES IN THE STRUGGLE FOR LIFE.

Many miss the part of Darwin's book that says "or the preservation of favoured races in the struggle for life" The book supports the idea that some races are further evolved and others are less advanced, and therefore, less valuable. This is an inherently racist belief system.

Most of the communist dictators were adopters of darwinistic evolution.

"The communist core idea that violent revolution, in which the strong overthrow the weak, was a natural, inevitable part of the unfolding of history from Darwinistic concepts and conclusions. Evolution affects sociology, business development, anthropology, every area of our lives."

"The Darwinian Foundation of Communism" published by Answers in Genesis and authored by Jerry Bergman. (https://answersingenesis.org/charles-darwin/racism/the-darwinian-foundation-of-communism/?srsltid=AfmBOoqV8U68N2sUtmByW0tiEs7MSww0iUZQxWxHaLmr0fLeiytoftNG)

"No intelligence allowed" **is a documentary by Ben Stein found that can be watched free with this QR code.**

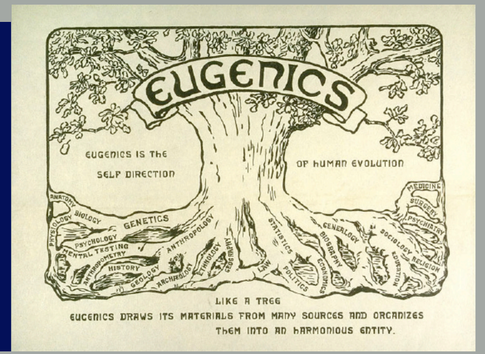

EUGENICS AND GENOCIDE

"**Eugenics**" was coined in 1883 by Francis Galton, a cousin of Charles Darwin. Eugenics is essentially scientific racism where less evolved species are removed so more advanced genomes can breed with each other.

Galton defined eugenics as "the study of agencies under social control that may improve or impair the r I'll never forget in high school when we sat down as a family to watch my first R rated movie, "Schindler's List." It showed graphic scenes of death and gore, but it was also part of understanding a horrible part of history. Once again, these are horrific and no fun to look at, but the educational value for contrast is important. However, it is important to teach our kids. Nazis believed the "Aryan" race—especially Northern Europeans—was genetically superior. They aimed to preserve and "purify" this so-called master race.

They believed certain groups—Jews, Roma (Gypsies), people with disabilities, and others—carried "degenerate" traits that weakened society.

Under the Law for the Prevention of Hereditarily Diseased Offspring (1933), around 400,000 people were sterilized against their will—often for conditions like epilepsy, schizophrenia, blindness, deafness, and even alcoholism.

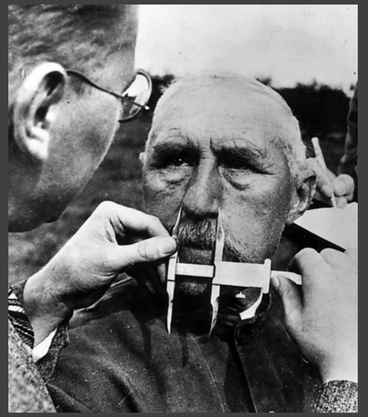

Eugenics is the self-direction of human evolution is stated right on the eugenics tree.

Beginning in 1939, the Nazis initiated a secret program to kill disabled children and adults, whom they labeled as "life unworthy of life." Around 70,000 to 300,000 people were murdered under this program, which laid the groundwork for the Holocaust. Eugenics ultimately fueled the Holocaust. Nazis saw the extermination of Jews as helping along natural selection or

Between 1939 and 1941 over 100,000 physically and mentally disabled Germans were killed in secret, without the consent of their families.

Men were treated like animals and put into categories of less fit or more fit to live. But Eugenics ALSO happened in America.

The Creation of mankind in the image of God gives them purpose and meaning. The idea that all life arises by chance gives rise humanism and nihilisim, the idea that all life is meaningless. Knowing our divine identity is a beautiful thing that adds purpose and value. When the sacredness of life is diluted we see the fruits are death and even murder.

Margaret Sanger, founder of Planned Parenthood, said *"The most serious charge that can be brought against modern 'benevolence' is that it encourages the perpetuation of defectives, delinquents and dependents. These are the most dangerous elements in the world community, the most devastating curse on human progress and expression."* (https://www.icr.org/article/evolution-american-abortion-mentality/)

She advocated applying "a stern and rigid policy of sterilization and segregation to that grade of population whose progeny is already tainted, or whose inheritance is such that objectionable traits may be transmitted to offspring."

Evolution can make life seem less precious and valued. Therefore, discarding life is not a moral dilemma for those with no morality.

BECOMING A HINDRANCE TO MODERN SCIENCE

The idea that humans have "vestigial organs" – structures that were once useful but are now seemingly useless – is a common topic in discussions about evolution, but the concept is often debated and the term "vestigial" itself is open to interpretation.

Definition
Vestigial organs are structures that are believed to have lost their original function in the course of evolution, becoming reduced in size and/or importance.

Examples
Some structures often cited as potential vestigial organs in humans include the appendix, tonsils, wisdom teeth, tailbone (coccyx), and the muscles that cause goosebumps.

Debate
While some believe these structures are remnants of our evolutionary past, others argue that they still serve a purpose, even if it's not as obvious as it once was

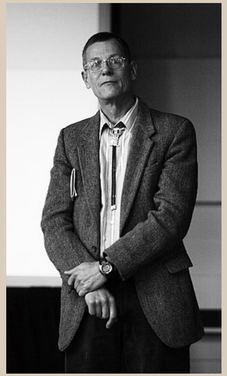

Appendix
While once thought to be a vestigial organ, research suggests it may play a role in immunity and gut health, serving as a repository for beneficial gut bacteria

Tonsils
Traditionally considered vestigial, tonsils are now understood to be part of the immune system, helping to fight off infections.

Wisdom Teeth
While they can cause problems when they erupt, wisdom teeth are not inherently useless and can serve a function in some individuals.

Tailbone (Coccyx)
It's a remnant of the tail our ancestors had, but it still provides support and plays a role in pelvic stability.

EVOLUTION CAN LEAD TO A LOSS OF FAITH AND HOPE; IT CAN LEAD TO ATHEISM

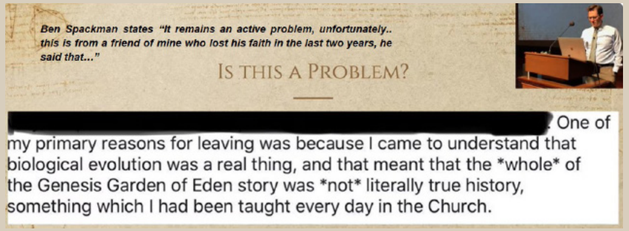

LOSS OF HOPE

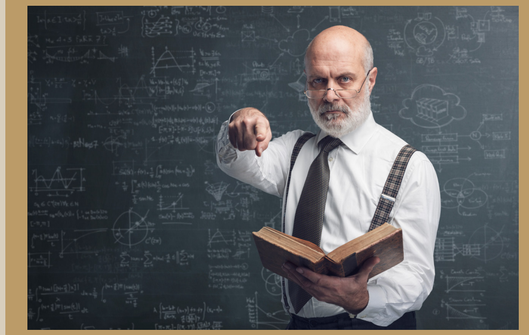

Dr Will Provine said, ***"Oh I was a christian... He (his college professor) started talking about evolution as if it had no design in it whatsoever. I want you to stand up in front of the students and tell them a lack in evolution. I read that book so carefully and could find no sign of there being any design whatsoever in evolution. I immediately began to doubt the existence of the deity. But it starts by giving up an active deity and then it gives up the hope that there is any life after death. When you give those two up the rest goes easily. Give up the hope in an immanent morality and then hope in free will. There is no hope whatsoever of there being any meaning in life. We live and we die and then we are gone"***

William Ball Provine (February 19, 1942 – September 1, 2015) was an American historian of science and of evolutionary biology and population genetics. He was recently diagnosed with brain tumor.

LOSS OF IDENTITY

Ben Spackman, a PHD student at BYU, is ironically an evolutionist, but shares how his friend left faith due to evolutionary theory.

"When they are learned they think they are wise, and they hearken not unto the counsel of God, for they set it aside, supposing they know of themselves, wherefore, their wisdom is foolishness and it profiteth them not. And they shall perish. But to be learned is good if they hearken unto the counsels of God." **(2 Nephi 9:28-29)**

THE ORIGIN OF LIFE

Evolution cannot find the origin of life.

The theory begins with a bang and ends with death and decay.
HOW does life form from rocks on a cold wet earth?
HOW does life form from hot burning lava that kills all things.

Their theory is that after the meteors crashed into each other for billions of years, it rained upon the rocks somehow and over time abiogenesis occured. Although, they have never been able to produce a single protein in a controlled envoronment. What makes them think something as complex as DNA could form from a harsh environment. The law of thermodynamics states that things deteriorate into chaos and decay, not organization and design.

DNA is the most complicated information system on earth. As we learn more about DNA, we are finding a more increasingly complex information system that directs cells. It is more advanced than any computer program on earth that were also created by intelligent minds.

The chances of getting amino acids to align sufficiently in a row to form proteins, is like getting a perfect match on a slot machine and doing it perfectly over 250 times!!

Learn more about probability of DNA forming by random chance from this video.

You might be surprised how much faith it takes to believe in abiogenesis. Some might argue it is an ideology more than a scientific theory.

Imagine getting the jackpot on 250 of these at the same time!

FAITH AND DNA COMPLEXITY

A simpler plan is to have faith in God.

"I, God, moved upon the waters. God made man from the dust of the earth. Male and female created he them" Gen 1: 2,27

Why is it so hard for man to believe in God?
Why do they look for things they cannot understand?

DNA is considered more complex than a computer, primarily due to its self-replicating and evolving nature, its intricate three-dimensional structure, and the vast amount of information it can store. While computers are powerful at processing information, their complexity lies in the specific tasks they perform, whereas DNA's complexity stems from its ability to encode and manage the building blocks of life.

A single gram of DNA can store an estimated 215 petabytes (215 million gigabytes) of data, making it a very high-density storage medium!

STASIS FOSSILS - "LIVING FOSSILS"

In evolutionary biology, "stasis" refers to a period of little or no evolutionary change in a species, often seen in the fossil record, and is a key concept in the punctuated equilibrium model.

Stasis describes a state where a species remains morphologically and genetically stable over a long period, with minimal or no changes occurring.

Fossil Record
The fossil record often shows that species can persist for extended periods without significant evolutionary change, which supports the concept of stasis.

Once again we see another enigma for the evolutionist. ***How could an animal have gone millions of years with no evolution?!*** This is simply the case with all animals because as the scripture and science shows, they only reproduce after their own kind. The ones that

Stasis describes a state where a species remains morphologically and genetically stable over a long period, with minimal or no changes occurring.

The fossil record often shows that species can persist for extended periods without significant evolutionary change, which supports the concept of stasis.

Here is a list of flora and fauna unchanged. These are listed by secular scientists and thought to have "miraculously" remained unchanged.

PLANTS
Ginkgo biloba – Fossils date back 270 million years.
Wollemia (Wollemi pine) – Thought extinct, found alive in Australia; fossils from 200 million years ago.
Cycads – Ancient seed plants, unchanged for ~300 million years.
Equisetum (Horsetail) – Dates back to the Paleozoic Era.
Metasequoia (Dawn redwood) – Once thought extinct, rediscovered in China.

FISH & MARINE ANIMALS
Coelacanth – Thought extinct for 66 million years, rediscovered in 1938.
Nautilus – Around for 500 million years, with minimal change.
Horseshoe crab – Largely unchanged for over 450 million years.
Lingula (Brachiopod) – Morphology stable for 500 million years.

REPTILES
Tuataras – Reptiles from New Zealand, around since the time of dinosaurs.
Crocodilians – Crocodiles, alligators, and gharials; little change in ~200 million years.

INSECTS & ARTHROPODS
Silverfish – Nearly identical to their 400-million-year-old ancestors.
Dragonflies – Very similar to forms from the Carboniferous (~300 mya).
Trilobites – Though extinct, some species remained unchanged for millions of years before dying out.
Cockroaches – Dates back at least 320 million years with little change.

OTHERS
Turtles – Earliest fossils date back over 200 million years with consistent shell structure.
Sharks (e.g., frilled shark) – Primitive species showing little change since the Jurassic.

CRUSTACEANS & MARINE INVERTEBRATES
Tadpole shrimp (Triops) – Around for over 300 million years, nearly unchanged.
Sea urchins (e.g., Eucidaris) – Some genera have shown little morphological change in ~150–200 million years.
Crinoids (sea lilies) – Especially stalked varieties, very similar to ancient forms from the Paleozoic.
Sponges (e.g., Hexactinellida) – Some forms unchanged for 500+ million years.

STASIS FOSSILS GALORE

Could it be a more logical conclusion that all animals have never evolved as represented by the stasis fossils? Our conclusion is that the animals that scientists say evolved such as dinosaurs evolving into birds is an unsubstantiated claim. The real legitimate scientific evidence is the stasis fossils. No evidence exists for transitional kinds or species. These are called anomalies or outliers when in fact they are the evidence we have. The rest of the evidence is dead and has no offspring to prove anything.

Biologists estimate that around 99% of species that have ever existed on Earth are currently extinct.

We argue that the fossilized animals are in the majority extinct species. They did not evolve into another species just because there are similar animals existing today. . duh that is obvious. And there is not evidence they reproduced or transitioned of any kind. Therefore we take the legal method and appeal to the eyewitnesses of the time, like Noah, Moses, and others. We believe in visions and spiritual visitations as evidence.

STASIS FOSSILS - COELACANTH

The infamous Coelacanth was thought to Be Extinct for 66 Million Years.

Scientists believed coelacanths had gone extinct during the Late Cretaceous, around the same time as the dinosaurs.

It was known only from fossils dating back over 360 million years, until a sensational rediscovery in 1938. A living coelacanth was unexpectedly found off the coast of South Africa in 1938 by a museum curator, Marjorie Courtenay-Latimer.

It shocked the scientific world — this was like finding a dinosaur alive in the ocean.

The fish that gives live birth was looked at as a transitional fossil.

Sensational Rediscovery in 1938
A living coelacanth was unexpectedly found off the coast of South Africa in 1938 by a museum curator, Marjorie Courtenay-Latimer.

It shocked the scientific world — this was like finding a dinosaur alive in the ocean.

MISSING LINKS... STILL MISSING

Our children are being taught in schools and museums that they evolved from an ape. This is one of my deep motivations to put time, money, and energy into sharing the truth. I don't want my children to be taught they evolved from apes if it isn't true. It definitely is not true. I also don't want them to act like apes. I want them to act like the divine royalty they are; sons and daughters of a king!

"Lucy" is more like art than science. Today she is debunked with the Piltdown man and all the others. Today she is shown to have just been nothing more than an ape. Read "***Contested Bones***" for more information. Look up Piltdown man fraud that plagued our textbooks for decades.

There have been no links found between animal kinds. No cat-dogs or the like. I've watched many debates on the topic and there just isn't proof without millions of years. So what are they finding from these so called missing links?

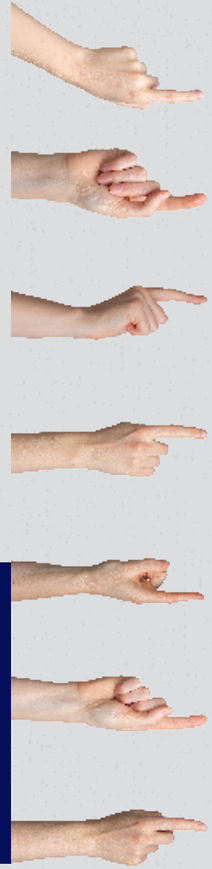

One day we will look back in awe at what was distorted and presented as "science."

Yes, Donald Johanson, the man who discovered the "Lucy Bones" is an atheist. He speaks at the Freedom FROM Religion conference. **HEAR WHAT HE SAYS!**

They found less than 30% of a skeleton. He went out with a grant to "find a missing link." Some of the bones from the site were from a pig. I wish we had space to dig more into the craziness here!

Hear what he says about God and religion.

YES THEY ARE... STILL MISSING

WATCH THIS AMAZING DOCUMENTARY ABOUT THE MISSING LINKS THEY FOUND AND WELL REALLY DIDN'T FIND. IT IS A DOCU-DRAMA THAT IS EDUCATIONAL AND BEAUTIFUL. I FEEL THE SPIRIT WHEN I WATCH IT.

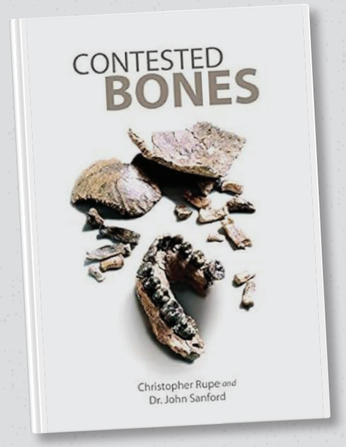

I couldn't find any more hands to point to, to get you to Seriously watch this.

You could read the intense 300+ page book, contested bones, full of peer reviewed articles dumbed down for someone like me to make sense of it all. However, honestly, that same data is more understandable and nicely placed in this movie. It is free because so many organizations and people have dedicated their lives to sharing the truth.

Truthfully, the last time I watched it, it made me cry. The truth is beautiful. The truth is God created us out of love.

These are the hominids they fully explore and almost completely debunk in the book and film:

- **Homo neanderthalensis** - Just humans
- **Home erectus** - Upright *"Ape-man"*?
- **Homo floresiensis** - The *"Hobbit"*
- **Australopethicus afarensis** - *"Lucy"*
- **Ardipithecus ramidus** - *"Ardi"*
- **Homo Habilis** - *"handy"*
- **Australopethicus sediba** - *"mosaic"* species
- **Homo naledi** - *"almost human"*

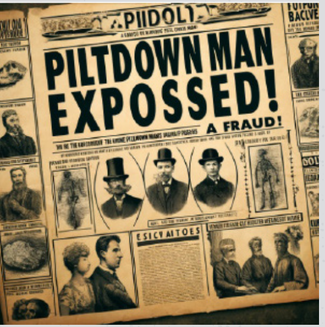

FAKES AND HOAXES

Those seeking to push the darwinian paradigm forward have gone to great lengths at times to find evidence to support the theory that seems to always be pushing. Evolutionism and atheism have a strong link to eachother and therefore cheating and dishonesty are not uncommon. Without accountability to a God, people can find justification for immoral behavior. In many cases the deciet is not revealed for many years. The piltdown man is the greatest example of this. This is just one example of the measures they might take to keep the false theories alive.

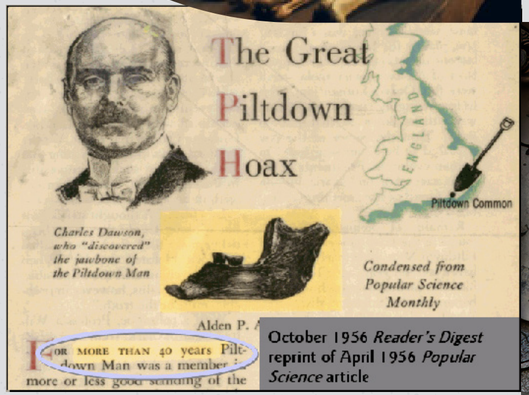

The "**Piltdown Man**" was a scientific fraud involving a purported human ancestor discovered in England in 1912. The remains, consisting of a skull fragment and a jawbone, were initially hailed as a "missing link" between apes and humans. However, in 1953, it was revealed to be a hoax, made up of a human skullcap and an ape mandible.

In 1912, amateur archaeologist Charles Dawson and paleontologist Arthur Smith Woodward announced the discovery of a fossilized skull and jawbone in a gravel pit near Piltdown village, England. This "Piltdown Man" was presented as the missing link in human evolution.

The jawbone was actually from an orangutan, and the skull fragments were of a human but with a much older date than the jaw. The jawbone had been treated with chemicals to appear older and more human-like.

In 1953, advanced analytical and dating techniques proved Piltdown Man to be a fake. The mandible was stained with potassium bichromate and the teeth had been filed down. Fluorine testing proved that the pieces of the skull were of different ages.

October 1956 *Reader's Digest* reprint of April 1956 *Popular Science* article

Evolution is a theroy in crisis: Several books share these thoughts. We shared "***The Altenberg 16:***" earlier. I would like to highlight ***"Evolution Still a Theory in Crisis"*** by Michael Denton.

EVOLUTION TEACHES 4 POSTULATES:

- Everything came from nothing. Big explosion of nothing created something.
- Life came spontaneously from primordial soup.
- Species evolve into new species through natural selection over time.
- Changes come by chance and are random through positive mutations.

THE PILLARS ARE CRUMBLING:

- Nothing can't produce something - I guess you need some serious education to figure that one out.
- Proving DNA and complex life came from soup is still failing - Abiogenises, first life, is now a separate term from evoution becaseu they can't prove abiogenisis and they don't want it connected to what they see as the settled theory of evolution.
- No species has ever been observed changing or giving birth to a different species. "wait millions of years." they say.
- Mutations have all been found to be delitirious. We do have mutations but they cause more disease. Things move towards choas, not toward order, This is the 2nd law of thermodynamics in action; meaning disorder or randomness increases.

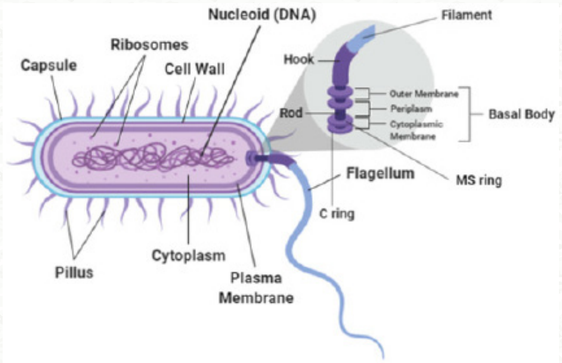

IRRIDUCIBLE COMPLEXITY

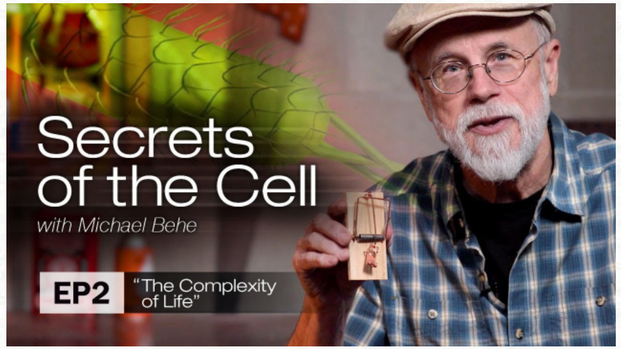

Certain biological systems (like the bacterial flagellum) are so complex that they could not have evolved gradually through natural selection, as each part is necessary for the entire system to function. Like a mouse trip requires all 5 parts. If one part is missing the device won't functino and there is no logical way it couldhave evolved with 4 parts because it would have been useless and discarded with the useless parts.
The parts are: the hammer, spring, board, latch, and

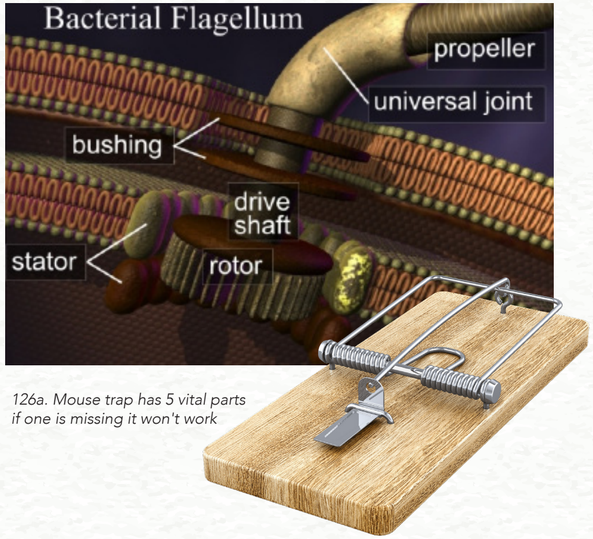

Michael Behe published the book "***Darwins Black Box***" detailing the complexity of the cell and if it is reduced by even one part the system fail.

The flagellum creates forward propultion for a cell. It is like a motor with parts that function. Reduce one of those parts and the whole system fails.

126b. Flagellum located in the cell wall to propel the cell forward.

126a. Mouse trap has 5 vital parts if one is missing it won't work

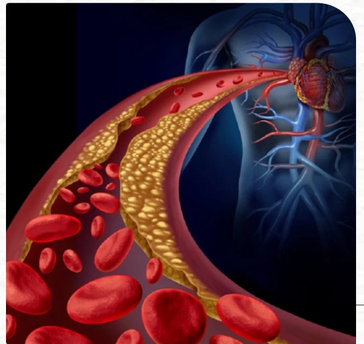

Our biological systems are interconnected. I mean Blood go without blood vessles and how would it pump with out Blood clotting could not have evolved because all the organisms that got a cut would have bled to death. Who would have been left to evolve the better system? When thought about it turns reason and logic on their head. Any organ evolving seems to be so difficult, especially when you show them all working together simulataneiously like a mouse trap.

How the Blood Clotting System Actually Works (Simplified)

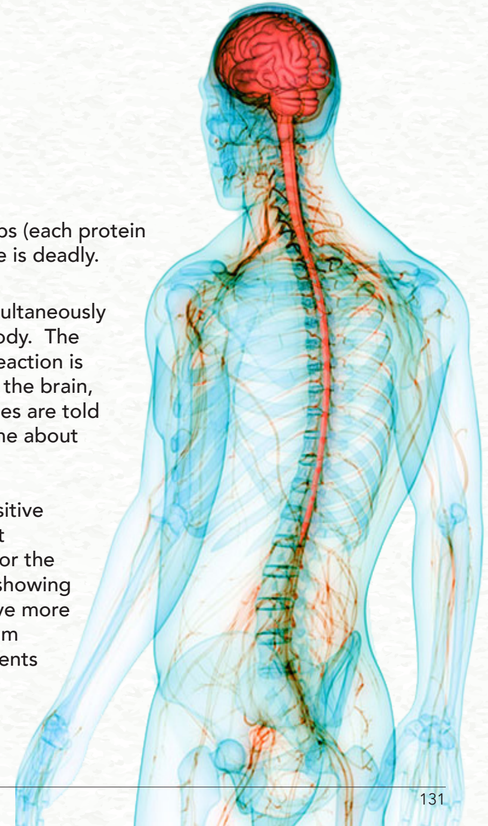

- ➥ When you get cut, blood vessels constrict.
- ➥ Platelets (tiny blood cells) stick to the site.
- ➥ A complex chain reaction starts, activating clotting factors (proteins named Factor I, II, III, etc.).
- ➥ Finally, fibrin threads form a stable clot.

There are about 20+ interacting proteins involved, with positive feedback loops (each protein activating the next). It's very tightly regulated — too much clotting or too little is deadly.

The nervous system is another of dozens of systems that has to work with simultaneously with the brain, muscles, touch, and full respons from the senses all over the body. The signals sent back to the brain are miraculously processed, understood and a reaction is returned. If someone touches a cactus the newvous system sends the pain to the brain, then the brain returns a signal to the finger to pull away. The muscles and bones are told exactly what to do as they respond. It takes a lot of faith to beleive these came about randomly without any intelligence.

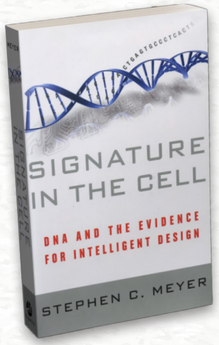

Evolutionists argue that mutations cause positive changes over time, yet studies show the vast majority of mutations are delitirious or bad for the organism. Observable science today is not showing positive mutations or advancements. We have more cancer, sickness and disease. Noah and Adam lived much longer. While we have advancements in medicine.

SIGNATURE IN THE CELL

Scientists have shown that DNA is so complex, there is no computer system on earth that compares.

Did you know that a single gram of DNA can store an estimated 215 petabytes (215 million gigabytes) of data, making it the most high-density storage medium on earth!?!

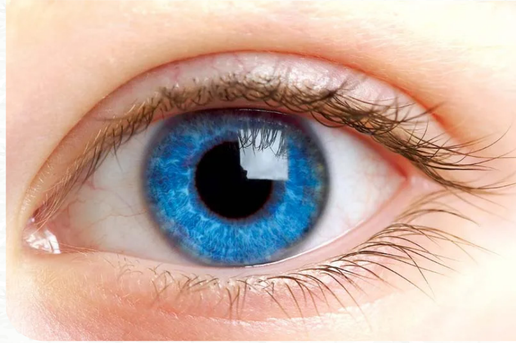

DNA is considered more complex than any computer, primarily due to its self-replicating and adapting nature, its intricate three-dimensional structure, and the vast amount of information it can store. While computers are powerful at processing information, their complexity lies in the specific tasks they perform, whereas DNA's complexity stems from its ability to encode and manage the building blocks of life.

"Signature in the Cell" by Stephen C. Meyer argues that the information encoded in DNA provides evidence for intelligent design, rather than natural selection alone. The book investigates the origins of life and explores the scientific debate surrounding the origin of information in cells, concluding that a purposeful, intelligent agency is the most plausible explanation.

The book centers on the complex and detailed information within DNA, arguing that its structure and function are best explained by an intelligent cause, rather than random processes.

Meyer examines and critiques various scientific theories attempting to explain the origin of life, arguing that they struggle to account for the complexity and information content of DNA. The book proposes **INTELLIGENT DESIGN** as a scientific framework that offers a more plausible explanation for the origin of life, emphasizing that it is based on scientific evidence rather than faith.

The complexity of the human body is far too advanced for random processes of chance. The human eye is incredibly complex, boasting a high resolution and processing capabilities. It can discern around 10 million colors, and a single eye contains over 2 million working parts. The human eye can also detect 24 million images in a lifetime and process 36,000 pieces of information per hour.

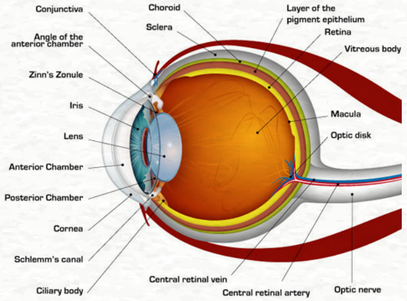

➔ The iris has over 256 unique characteristics, more than fingerprints.

➔ The cornea, the transparent front part of the eye, receives oxygen directly from the air, not the lungs.

➔ The human eye can regenerate itself, particularly the cornea.

➔ The human eye can focus on 50 different objects every second.

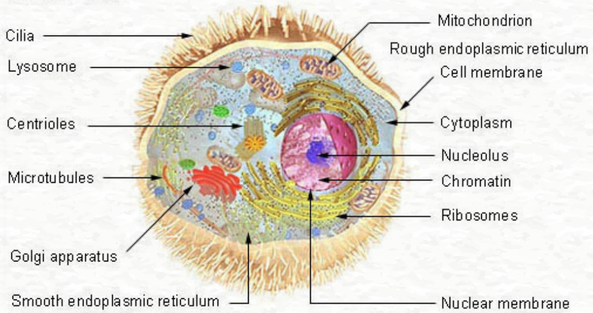

We see the world upside down, but our brain flips the image right-side-up. The blind spot, where the optic nerve connects to the retina, is essential for vision. The macula, a part of the retina, provides high-quality focused vision.

Physiological Functions

The eye is the fastest muscle in the body, capable of contracting in less than 1/100th of a second. We blink on average 12 times a minute, which is about 20,000-30,000 times a day.

Cell Structure

The human cell is also a complex factory with each part functioning with a specific purpose. In Darwin's time, cells were largely understood as simple, jelly-like blobs under primitive microscopes, with the internal contents, known as protoplasm, considered a "jelly-like substance"

NO DEATH BEFORE ADAM

Evolution shows death taking place for millions of years prior to Adam and Eve. Natural selection is the proclaimed mechanism for evolution. Natural selection is simply the death and elimination of less beneficial organisms so that "more evolved" ones may take their place. It is a scene in a play full of death, carnage, and fighting to survive. It is far from the gospel of love, service, and kindness for eachother.

The irony of these ideas is evolutionists today are sometimes the largest proponents of caring for the environment and endangered species. The catch to it all is that often times we the humans are painted as the antagonists in the plot. Humans seem to be causing the most problems on the earth with overhunting, pollution, overpopulation, and now the everpresent carbon emissions agenda. Have you heard of the Georgia Guidestones? As you drive through rural Georgia you might be amazed to see several massive stone tablets in a random field towering more than 12' into the sky with rules for humanity etched, literally, into stone. They stand still today and were constructed in 1980. One of the guides listed is to maintain a population in balance with nature numbering 500,000,000. My question to the founder of this monument is what are we going to do with the other 5,500,000,000 people on earth? Kill them off?

"For as in Adam all die, even so in Christ shall all be made alive." (1 Cor 15:22)

"Mortal death came into the world at the Fall." (Boyd K. Packer, Funerals—A Time for Reverence, General conference, Oct, 1988)

"Wherefore, as by one man sin entered into the world, and death by sin; and so death passed upon all men, for that all have sinned" (Romans 5:12)

How can some say that things have been dying and evolving for millions of years when the dating methods are in error, the missing links are still missing, and the scriptures testify of death beginning with Adam. These scriptures clearly testifies to the great plan of salvation. The plan of the creator that we would die since the fall of Adam, and look to a savoir to be redeemed, a

"And he said unto them: Because that Adam fell, we are; and by his fall came death; and we are made partakers of misery and woe." (Moses 6:48)

Bruce R McConkie stated *"As Adam brought death, so Christ brought life; as Adam is the father of mortality, so Christ is the father of immortality."*

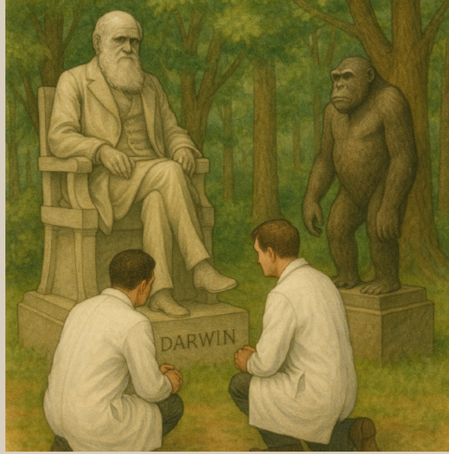

FAITH IN EVOLUTION

It takes a lot of belief in Darwin's theory to fill in the blanks for all the missing fossils, beneficial mutations, or complex systems, and DNA information arising out of random chance. Some might extrapolate that microevolution or changes within the genomic information is macroevolution, BUT it has not been observed and is heavily assumed based on world view.

If you watched the video "***Genesis Impact***" you see that after going through each flimsy argument for evolution they revert back to the

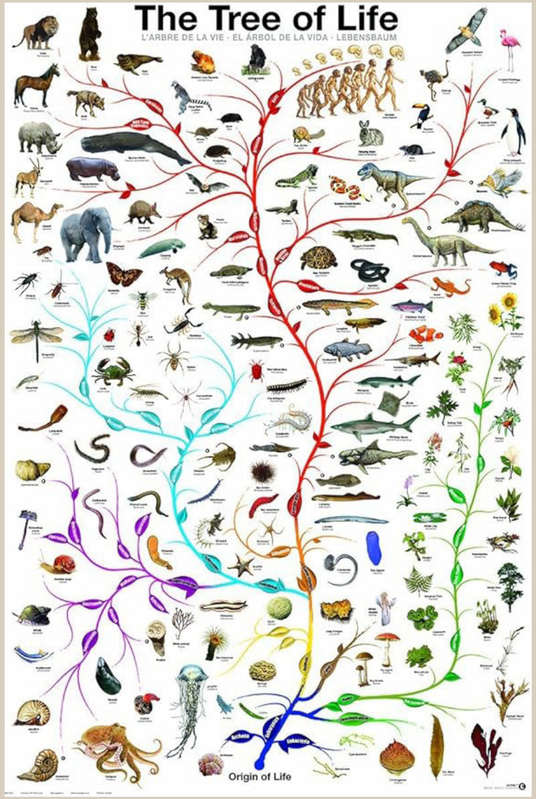

Evolution is promoted as an ideology, a system of ideas and beliefs, rather than just a collection of scientific facts. Some argue that evolution is inherently atheistic because it suggests that there's no need for a creator or higher power to explain the universe's origins. Evolution is has moral implications, for example, their teaching that humans are simply products of natural selection and not inherently special or moral beings.

Evolution is one of the largest religions on earth. Its Museums are temples, its universities are its churches, Their professors are their priestes, their prophet is Darwin and their Bible is his book "on the origin of species." This is a state run and state funded religion. Nephi prophesied 1 Nephi 14:3 "And that great pit, which hath been digged for them by that great and abominable church, which was founded by the devil and his children, that he might lead away the souls of men down to hell" Now is this too extreme? What is the doctrine of the devil exactly? what does he teach more than to go after our fundamental identity and the redeemer of mankind from the fall. Any doctrine that takes us away from Christ is the doctrine of Satan. With that in mind. What is more contrary to being made in the image of God, than made in the image of an ape?

WHICH TREE DO YOU FOLLOW?

Every American child is learning this in their biology class. This image of the evolution "tree of life"is listed for sale on amazon. One review said " We love this poster - I find the kids all staring at it at random times and asking questions." another said " Excellent for my classroom!" They are taught these pseudotheories as required teaching with government funding. Why aren't they taught about the real tree of life? The tree of life the fruit is sweet and brings us closer to the sweet love of Jesus Christ.

WHAT I'M TRYING TO SAY IS, YOU ARE MAGNIFICENT!

YOU WERE INTENTIONALLY CREATED IN GOD'S IMAGE WITH SO MUCH LOVE!

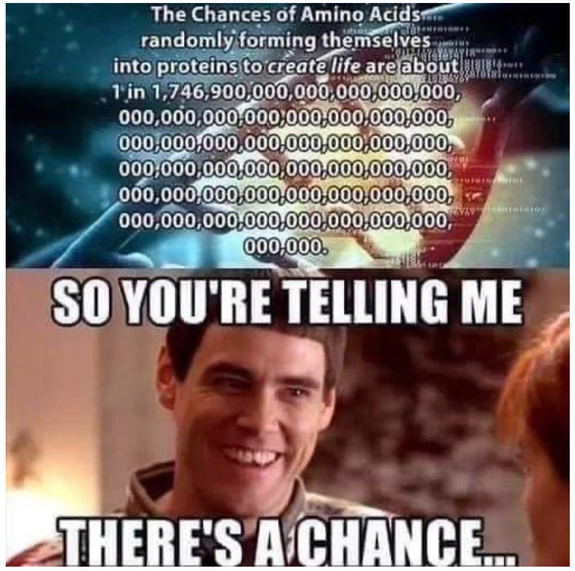

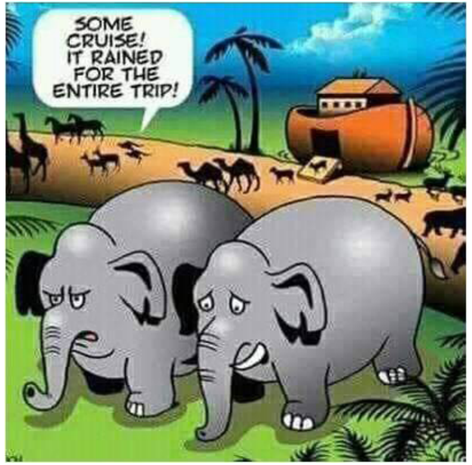

NOW I ASK, as Jesus asked the Brother of Jared. DO you see that He created You?
"Seest thou that ye are created after mine own image?" (Ether 3:15)

You are worthy of his love. Reach out to feel his love.

BONUS PAGES: MEMES

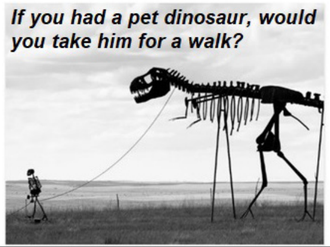

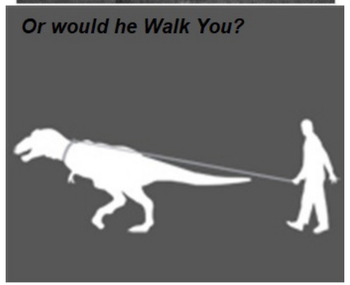

The Chances of Amino Acids randomly forming themselves into proteins to create life are about 1 in 1,746,900,000,000,000

That moment you find out that Dolph Lundgren is exponentially more qualified to be called a scientist than Bill Nye is. 😐

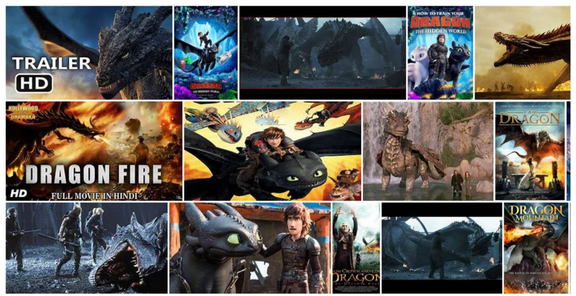

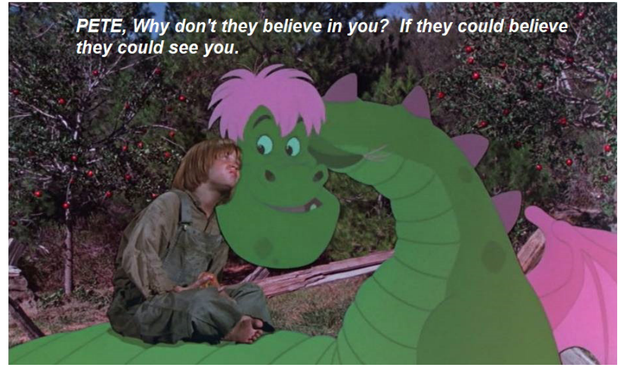

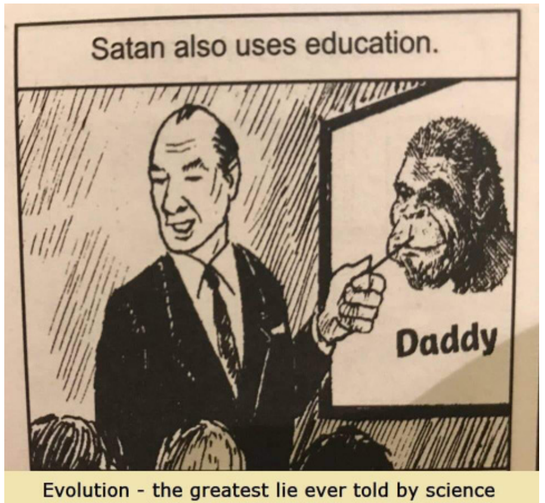

Why was Eve's computer so slow?
The apple only had one byte.

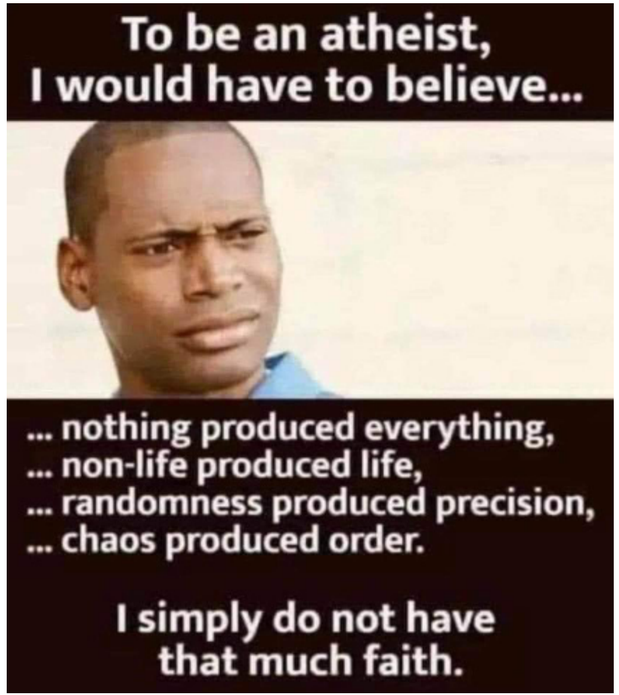

IF DRAGONS ARE A MYTH WHY ARE THEY PLASTERED ON MY BEDROOM WALL, MY TV SCREEN, MY PILLOW, BEDSHEETS, AND MY DREAMS ARE FILLED WITH DRAGONS? HMMM

Evolution - the greatest lie ever told by science

BONUS PAGES: DINOSAURS LIVING TODAY.

133a. NOW YOU HAVE LOST IT!

Now you might be thinking: **"I suspected you were crazy, but now I'm sure you are nuts!"** (Fig 133a.) Many say they couldn't go unnoticed with so many people on earth and cell phones with cameras on them now. Plus they would eat all the people. Well that is just from Hollywood movies, and the jungle gorilla wasn't discovered until 1901. (Fig133d.) Water dwelling, nocturnal, or amphibious animals can hide under water and almost completely disappear.

The Africans said they had a zebra-giraffe hybrid. Westerners didn't believe them until 1901 when they brought out a pelt of, what we now know as, an okapi. (Fig133e.)

We have shown (See pages 91-110) that seemingly mythical animals lived with ancient peoples just hundreds of years ago as dragons.

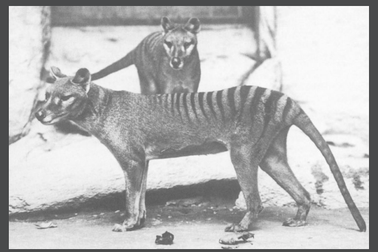

Eyewitness accounts might become subverted because people are treated as crazy after sharing their experience of a sighting; they then stop sharing. Could there really be some alive on our small planet?

The tasmanian tiger was thought to be extinct but there may be sightings of this animal today (fig 133 c.). This jungle gorilla was a mystery until 1847 when a skull was produced and not formalized until 1902 (fig 133d.). Amazing what we are still learning.

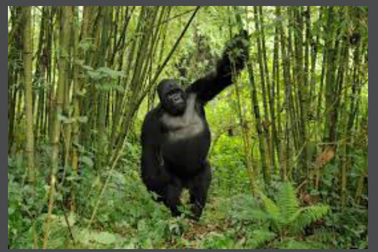

Natives said they had this animal, we didn't believe (fig 133e.).

133b. Dinosaurs would just eat everyone... based on Hollywood.

133 c. The tasmanian tiger was thought to be extinct but there may be sightings of this animal today.

133d. This jungle gorilla was a mystery before 1901. Amazing what we are still learning

133e. Natives said they had this animal, we didn't believe.

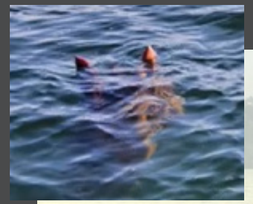

SIGHTINGS IN THE WATER

The waters are one of the most illusive places on earth still today in 2025. They estimate that only 5% of the worlds oceans have been explored.

There are lake monster sightings in dozens of lakes that go almost completely unknown. See the partial list (Fig 136e.).

There are a few that have gained some fame, one of which Ogopogo is a lake monster said to inhabit Okanagan Lake in British Columbia, Canada. They have statues, souveniers, and festivals in its honor.

There was a sighting in 2022 that actually got a picture. There were 3 witnesses of the animal. It would seem like a complete hoax but there is a part of the animal sticking out of the water.

OGOPOGO

136a. incomplete list of lakemonster sightings

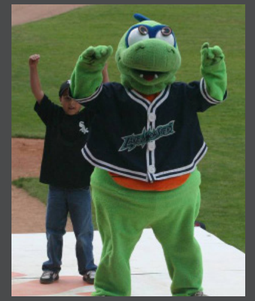

This statue sits off the lake today in the city of Kelowna.

Watch the interview with the eyewitnesses

Here are some of the lakes with additional sightings:
Morag, in Loch Morar, Scotland
Lagarfljót Worm, in Lagarfljót, Iceland
Ogopogo, in Okanagan Lake, Canada
Lariosauro, in Lake Como, Italy
Champ, in Lake Champlain, Canada and US
Memphre, in Lake Memphremagog, Canada and US
Bessie, in Lake Erie, Canada and US
Nahuelito, in Nahuel Huapi Lake, Argentina
Muyso or Monster of Lake Tota, Colombia
Van Gölü Canavarı, in Lake Van, Turkey
Inkanyamba, in Howick Falls, South Africa
Flathead Lake Monster, Flathead Lake, Montana, US
Lake Prespa, Albania,
Lake Michigan (USA): "**Bessie**"
Flathead Lake (USA): "**Flessie**"
Lake Iliamna (USA): "**Iliamna Lake Monster**"
Lake Tota (Colombia): "**Muyso**"
Lake Simcoe (Canada): "**Igopogo**"
Lake Manitoba (Canada): "**Manipogo**"
Lake Ontario (Canada/USA): "**Kingstie**"
Lake Como (Italy): "**Lariosauro**" is associated with this lake.
Lake Tahoe (USA): "**Tahoe Tessie**"

CHAMP

One other famous location of sightings is a lake in vermont. **LAKE CHAMPLAIN** is 107 mi long and 14 mi across at its widest point, with a maximum depth of approximately 400 ft. Sightings of the champ monster are now listed on signs next to the lake, they were so prevalent they named the animal **CHAMP** and even have a mascot (138g) and a parade each year with a "Champ" float. In addition to the nearly 100 sightings listed by name of witness and date (138d), they have also passed laws to protect the animal. (Fig 138e)

138g. mascot of Champ.

The most famous eyewitness, Sandra Mansi, got a photo of the animal in 1971 while playing on the beach with kids. She defended the story to her death. Watch an interview with her here (Fig 138b.) Her image, The Mansi Photo, has never been debunked by epxerts as a fake and is regarded as authentic. (fig138c.) I also had to throw in a photo of another mysterious animal found in a lake. (fig 138e)

138b. Sandra Mansi testifies that she watched the animal for 7 minutes and her photo has never been debunked.

138c.

138e. sign stating the laws protecting the animal

Fig 138f .OH I forgot these other water sightings:

138a. the interview

138d. Champ sightings are documented next to the lake. And they have mascots and floats during the annual parade representing the animal sighted.

SIGHTINGS IN THE AIR

Thunderbird

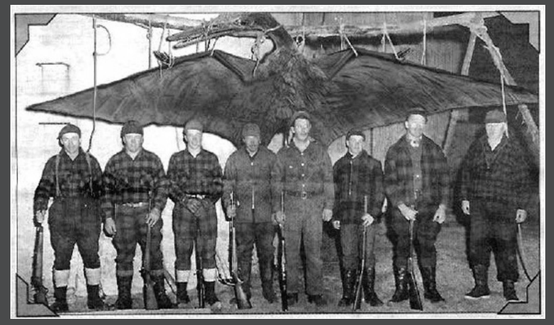

Honestly I have no information on this photo

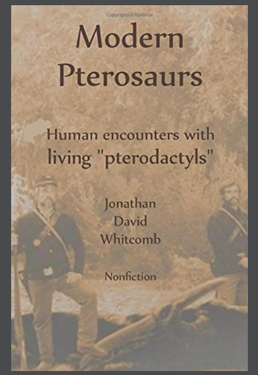

April 26,1890 the Tombstone Epitaph published an incredible article of six gunslingers shooting the Tombstone Thunderbird right out of the sky.

Kongamatos are large pterosaur-like cryptids living in tropical and subtropical regions of Africa, particularly in Zambia, the Congo, and Angola.

Similar to the tombston photo. with less description.

Today Jonathan Whitcomb documents pterosaur sightings from California to Austrailia and Papua New Guinea

SIGHTINGS ON THE LAND

Mokele Mbembe - Congo

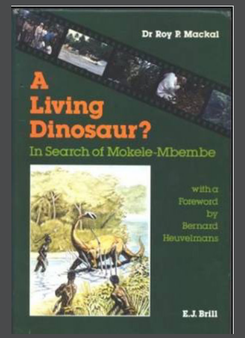

The congo has 690,000 square miles, largely unexplored.There are approximately 10, 000 species of tropical plants in the Congo Basin and 30 percent are unique to the region including endangered wildlife, and forest elephants.

Full documentary here

Roy Mackal explored the region and documented his findings in his book. The foot print is documented in his travels.

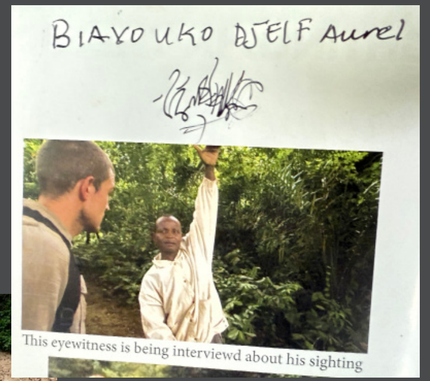

Roy mackal has been to the Congo looking for the animal

This eyewitness is being interviewd about his sighting, I have been to Cameroon now and met him.

I met Arjel in Cameroon and he signed my book!

Michel Ballot sent me this image as a place they think the animal has been entering the water.

Explorer Michel Ballot finds a foot print in the sand. He is still doing expeditions into the Congo.

This QR code shows an authentic eyewitness as documented on Nat Geo, Beast Hunter.

CONCLUSION

I believe there is a truth, and it is discoverable. Many have conceded the right and ability to know in this life, however there are more answers to be had in this life if we keep seeking. We should never stop seeking truth. Joseph Smith said *"a man cannot be saved in ignorance."* (D&C 131:6) We are to seek truth and learn to grow and progress spiritually.

I testify that God created the Heavens and the Earth!

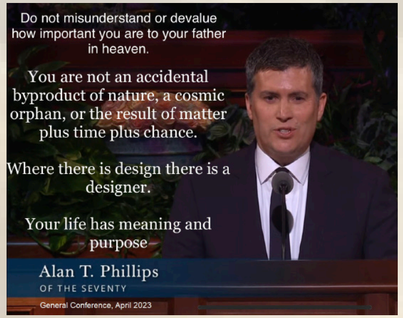

He created YOU and ME, every animal,... and the Dinosaurs. Adam and Eve were the first people on earth and they fell requiring need for a mediator. That redeemer is Jesus Christ who was slain for the sins of the world! Jesus, with others, was and is the creator of the earth.

There was a catostrophic worldwide flood, and the scriptures tell us a true account of the earth's history! And of course, **YOU ARE IMPORTANT** because he made you! He loves you as you are his, **MADE IN HIS IMAGE**.

I have found for myself that the scriptures have the validity to say that dragons were real animals and that the sacred texts demonstrate actual events. The flood of Noah was an accurate event as depicted in many scriptures and therefore Jesus Christ was a real person, the Son of God born in the flesh to show us the way. I believe his miracles, unexplained by science are real events. And that if I apply this gospel in my life I can see and experience the similar miracles in my life. We are spiritual beings having an earthly experience on this temporal sphere. God created this magnificent and perfect earth for us to enjoy and learn.

The flood of Noah was a real global event that killed out the majority of all life and dinosaurs. The flood testifies to God's power and refutes the evolutionary paradigm.

We see the money and support for evolution and look at it like a goliath we must fight in our day. David was able to kill goliath. We only hope this goliath doesn't claim too man spiritual lives before the end. Lies are dominant on the earth at this time as we learn that satan has great power on the earth. "he beheld Satan; and he had a great chain in his hand, and it veiled the whole face of the earth with darkness; and he looked up and laughed," Moses 7:26

We apoogize we could not cover all the topics relating to evolution and religion. It is almost an impossible feat with a flood of evidence the world over. (pun intended) We echo "all things denote there is a God; yea, " as did Alma (alma 30:44). That the revolution of the earth and its very existence denote there is a loving God who knows us individually and is there to support us!

Many people are not ready for this information. We are seeking those *"who seek the truth but know not where to find it."* When I learned this information for the first time it rang true in just a few minutes. As I dug deeper and verified the data points I was astounded.

IN THE BEGINNING GOD CREATED THE HEAVENS AND THE EARTH.

OUR GOAL IS TO BUILD FAITH WITH GOOD SCIENCE. HERE ARE SOME OF THE QUESTIONS WE HOPE TO ANSWER:

- ✔ **Why are dragons mentioned in the Bible and Book of Mormon?**
- ✔ **What has caused so many dragon legends all over the earth?**
- ✔ **Why have the prophets spoken against evolution at times?**
- ✔ **How could Noah have fit all the animals on the ark?**
- ✔ **Why would some scientists teach there was death before Adam?**
- ✔ **Has the Church of Jesus Christ of Latter Day Saints spoken for or against evolution?**
- ✔ **Did we evolve from an ape like ancestor?**
- ✔ **How do scientists really know the earth is billions of years old?**
- ✔ **Was it just a local flood or maybe a story derived from other cultures?**
- ✔ **Why would some scientists teach there was death before adam?**
- ✔ **Has the Church of Jesus Christ of Latter day saints spoken for or against evolution?**
- ✔ **How do scientists really know the earth is billions of years old?**
- ✔ **How do they know the age of a fossil?**
- ✔ **How could the entire earth flooded with water?**

Praise for Dinosaurs in Scripture

"It helps you understand that dinosaurs were real and comprehend why this is important to all of us. This at the core of all of our lives whether we believe in God or not. Dinosaurs are real and both religion and science come together in this book testifying of this fact. Jeremy's passion on this topic is evident throughout this book and his desire to learn and share his experiences takes you to places you have never been. I also love the subtitle of this book: Where Faith and Science Meet." ~ Dean W. Sessions

"What a fascinating book for those who seek to know the truth in scriptures! Jeremy has done a fantastic job bringing the evidence and these stories together in one easy-to-read book. I look forward to sharing this with my friends and family." ~ Russell H. Barlow
